Multiplication Tables 3 & 4

Learn with fun stories and Indian examples!

The Idli Problem

3 plates with 4 idlis each!

Priya is setting up breakfast for her family. She has 3 plates and puts 4 soft, fluffy idlis on each plate. Can you help her count how many idlis there are altogether?

Hint 1

Count the idlis on each plate carefully

Think!

How many idlis altogether?

Skip Counting Warm-Up

Let's count in 2s, 3s, and 4s!

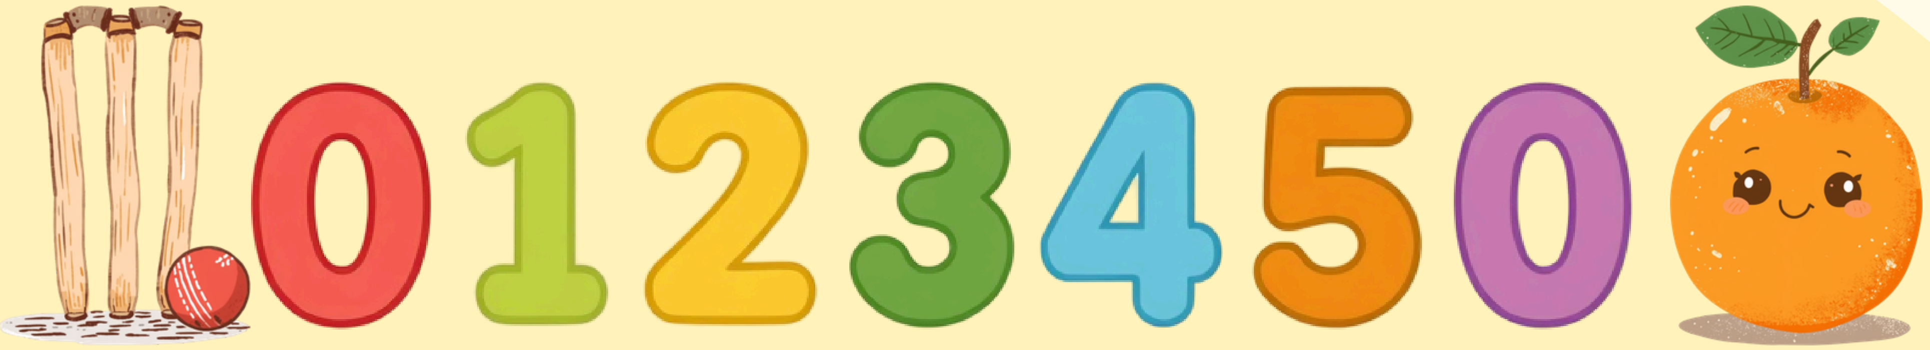
Skip counting helps us multiply faster! When we count by jumping numbers, we're already doing multiplication. Let's practice together!

Try 2s!

Count by 2s: 2, 4, 6, 8, 10...

Try 3s!

Count by 3s: 3, 6, 9, 12, 15...



Multiplication is Repeated Addition

Adding the Same Number Again and Again!

When we multiply, we add the same number many times! Look at 3 × 4 — it means we add 3 four times: 3 + 3 + 3 + 3 = 12. Easy, right?

Count Them

3 + 3 + 3 + 3 equals 12 tulsi leaves!

Remember

So 3 × 4 = 12. Same answer, faster way!

The 3 Times Table Chant

Say it loud with rhythm!

3 × 1 = 3

- 3 ones are 3!
- 3 twos are 6!
- 3 threes are 9!

3 × 4 = 12

- 3 fours are 12!
- 3 fives are 15!
- 3 sixes are 18!

3 × 7 = 21

- 3 sevens are 21!
- 3 eights are 24!

3 × 9 = 27

- 3 nines are 27!
- 3 tens are 30!

Patterns in Table 3

Discover the Magic in Numbers!

Look at the units digits in the 3 times table: 3, 6, 9, 12, 15, 18, 21, 24, 27, 30. See the pattern? The last digits cycle: 3, 6, 9, 2, 5, 8, 1, 4, 7, 0!

Pattern 1

Units digits cycle: 3, 6, 9, 2, 5, 8, 1, 4, 7, 0

Pattern 2

Add the digits! 12 → 1+2=3, 27 → 2+7=9. Always divisible by 3!

Pattern 3

Count by 3s like a frog hopping on a number line!

Multiplication is Repeated Addition

Learning the 4 Times Table

When we multiply, we add the same number again and again! For example: 4×3 means we add 4 three times: $4 + 4 + 4 = 12$. Each cycle-rickshaw has 4 wheels!

See It!

3 rickshaws = 3 groups of 4 wheels = 12 wheels total!

Say It!

$4 + 4 + 4$ is the same as saying 4×3!

The 4 Times Table Chant

Say it loud with rhythm!

4 × 1 = 4
4 ones are 4, 4 twos are 8, 4 threes are 12!

4 × 4 = 16
4 fours are 16, 4 fives are 20, 4 sixes are 24!

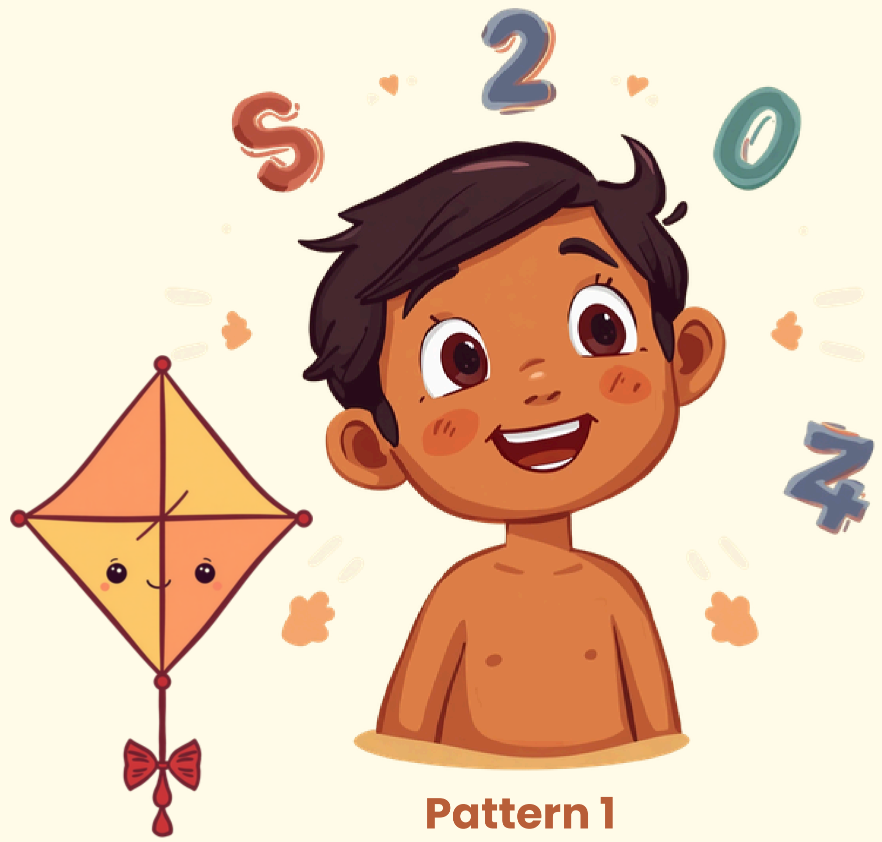
4 × 7 = 28
4 sevens are 28, 4 eights are 32, 4 nines are 36!

4 × 10 = 40
4 tens are 40! Now you know the 4 times table!

Patterns in Table 4

Discover the Magic Tricks!

Look at these amazing patterns! All answers in the 4 times table are even numbers. Try the double-double trick: to find 4 × 6, double 6 to get 12, then double 12 to get 24!



Pattern 1

All multiples of 4 are even numbers: 4, 8, 12, 16, 20...

Pattern 2

Double-Double Trick: 4 × 5 = double 5 (10), double again (20)!

Pattern 3

Units digits repeat: 4, 8, 2, 6, 0, 4, 8, 2, 6, 0

Commutativity of Multiplication

Turn-Around Facts Make Math Easier!

Same answer, easier to remember! When you know 3 × 4, you also know 4 × 3. That's half the facts to memorize!

3 × 4 = 4 × 3 = 12
Look! Whether you have 3 groups of 4 or 4 groups of 3, you get the same answer!

Array 1
3 rows of 4 dots = 12 dots total

Array 2
4 rows of 3 dots = 12 dots total

Word Problem: Laddoos!

Each child gets 3 laddoos. There are 7 children.

How many laddoos altogether? Let's think: 3 + 3 + 3 + 3 + 3 + 3 + 3 = ? That's 3 added 7 times! So we write: 3 × 7 = 21 laddoos!

Think About It

3 laddoos for each of 7 children

Answer

3 × 7 = 21 laddoos total!

Word Problem 2 - Kites

Counting Corners in the Sky!

Think: Each kite has 4 corners. Arjun has 6 kites.
So we multiply 4 by 6 to find the total corners!

A kite has 4 corners. Arjun flew 6 kites in the park.
How many corners are there in all the kites?

Answer

$4 \times 6 = 24$ corners!

Repeated Addition

$4 + 4 + 4 + 4 + 4 + 4 = 24$

Word Problem 3: Bangles

Let's Count the Beautiful Bangles!

Meera's shop has 3 shelves. Each shelf has 9 colorful bangles. How many bangles are there in total? Let's use multiplication: 3 × 9 = 27 bangles!

Method 1

Repeated Addition
9 + 9 + 9 = 27

Method 2

Multiplication Way
3 × 9 = 27 bangles!

Today We Learned!

Great job learning multiplication!

Key Point 1
Multiplication is repeated addition

Key Point 2
3 and 4 times tables with fun chants

Key Point 3
Patterns in numbers help memory

Key Point 4
Commutativity makes math easier

Rapid Recall Quiz

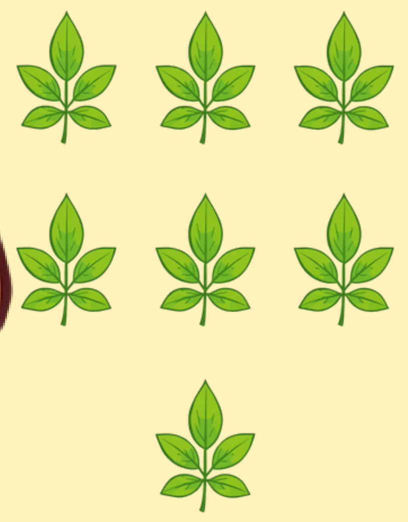
Test Your Multiplication Skills!

Let's try 5 quick questions! Show what you've learned about the 3 and 4 times tables. Think fast and have fun!

Ready?
You have 2 minutes to answer all questions

Let's Go!
Take a deep breath and say "I am ready!"

5



Quiz Question 1

3 × 5 = ?

Count the groups of tulsi leaves below. Each group has 3 leaves. How many leaves are there in 5 groups? Think about it and answer!

Tip 1
Hint: Count in 3s — 3, 6, 9...

Tip 2
You can do this! Think and answer.

Quiz Question 2

$4 \times 7 = ?$

Count the wheels on all the cycle-rickshaws! Each rickshaw has 4 wheels. Can you find the answer?

Hint 1
Think: 4 added 7 times

Hint 2
Use skip counting by 4s!

Quiz Question 3

3 × 9 = ?

Count the bangles in groups of 3! How many bangles are there in 9 groups? Think about your 3 times table chant to find the answer.

Hint 1

Use repeated addition: 3+3+3+3+3+3+3+3+3

Hint 2

Remember the pattern in table 3!

Quiz Questions 4 & 5

Two Quick Challenges!

Answer these two multiplication questions as fast as you can! Remember your times tables and think about repeated addition.

Question 4

Question 4:

4 × 3 = ?

Question 5

Question 5:

3 × 10 = ?

Home Challenge & Thank You!

Keep Practicing Multiplication at Home!

Your Challenge:

Write your own ×3 or ×4 word problem!

Remember:

Practice with your family!
