Grade 2 Maths: Division Introduction

Planrs Academy Master Course

Welcome, Division Explorers! In this lesson you will discover what division means, how to use the ÷ symbol, and how sharing equally connects to maths. Get ready to become a Division Star! ■

SECTION 1

What is Division?

Division is one of the four basic operations in maths. It means **splitting a number into equal parts** or **making equal groups**.

Whenever we share things fairly — sweets, pencils, balls — we are doing division!

Two Big Ideas in Division

■ **Equal Sharing**	Split a total amount into a set number of equal groups. Example: 12 sweets shared among 4 children → each child gets 3.
■ **Equal Grouping**	Find how many groups of a certain size can be made. Example: 15 pencils grouped in 5s → there are 3 groups.

SECTION 2

Equal Sharing

Imagine you have **12 sweets** and you want to share them equally among **4 children**. How many does each child get?

Step-by-Step Sharing:

1. Start with all 12 sweets in one pile.
2. Give 1 sweet to each child in turn (round by round).
3. Keep going until all sweets are gone.
4. Count how many each child received → **3 sweets each**!

$$12 \div 4 = 3$$

DIVIDEND DIVISOR QUOTIENT

■ **Each child gets 3 sweets — perfectly fair!**

SECTION 3

Equal Grouping

Now imagine you have **15 pencils**. You want to bundle them into groups of **5**. How many bundles will you have?

Step-by-Step Grouping:

1. Count out 5 pencils → that is Group 1.
2. Count out 5 more → Group 2.
3. Count out 5 more → Group 3.
4. No pencils left! You made **3 groups**.

$$15 \div 5 = 3$$

DIVIDEND DIVISOR QUOTIENT

■ **There are 3 groups of 5 pencils.**

SECTION 4

Meet the Division Symbol ÷

The symbol ÷ is called the **obelus** (oh-beh-lus). It tells us to divide. The two dots represent the two parts we are splitting something into, and the line in the middle separates them.

$$12 \div 4 = 3$$

Part of the equation	Name	Meaning
12	Dividend	The total — what we are dividing
4	Divisor	How many groups (or group size)
3	Quotient	The answer — each group's share
÷	Obelus	The division symbol
=	Equals	Both sides have the same value

SECTION 5

Division Vocabulary Made Easy!

Dividend — **Dividend:** The number being divided — the total amount you start with.

Divisor — **Divisor:** The number you divide by — how many groups or group size.

Quotient — **Quotient:** The result of division — the answer you get.

Equal — **Equal:** The same in size or amount — every group has the same.

Share — **Share:** To give fairly to each person or group.

SECTION 6

Division & Repeated Subtraction

Another way to understand division is **repeated subtraction**. You keep taking away the same amount until you reach zero. Count how many times you subtracted — that is your quotient!

Example: 12 ÷ 3

Step	Calculation	Running Total
Start	—	12
Step 1	12 – 3	9
Step 2	9 – 3	6
Step 3	6 – 3	3
Step 4	3 – 3	0 ✓
	We subtracted 4 times → 12 ÷ 3 = 4	

Also note: **3 + 3 + 3 + 3 = 12** means **12 ÷ 3 = 4**. Division and repeated subtraction always match!

SECTION 7

Division and Multiplication Are Friends!

Division and multiplication are **inverse operations** — they undo each other. If you know a multiplication fact, you can use it to solve a division problem!

Multiplication Fact	Division Fact
3 × 4 = 12	12 ÷ 3 = 4
2 × 5 = 10	10 ÷ 2 = 5
4 × 5 = 20	20 ÷ 4 = 5
3 × 6 = 18	18 ÷ 3 = 6
2 × 9 = 18	18 ÷ 2 = 9

SECTION 8

Division in Everyday Life

We use division every day without even thinking about it! Here are some real-life examples:

■ **Sharing Sweets**	Sharing 20 sweets equally among 5 friends → each gets 4.
✏■ **Sorting Pencils**	Putting 30 pencils into boxes of 6 → you fill 5 boxes.
■ **Dividing Balls**	Giving out 18 balls to 3 teams → each team gets 6.
■ **Cutting a Pizza**	A pizza cut into 8 slices shared by 2 people → 4 slices each.
■ **Distributing Books**	24 books for 4 tables → 6 books per table.

SECTION 9

Practice Activities

Activity 1 — Let's Share!

Imagine you have sweets to share into bowls equally. Fill in the blanks below:

Total Sweets	Number of Bowls	Each Bowl Gets
12	4	______
20	5	______
16	4	______
18	6	______
24	8	______

Activity 2 — Grouping Puzzle!

Make equal groups and write the division sentence:

Total Items	Group Size	Number of Groups	Division Sentence
15 pencils	5	______	15 ÷ 5 = ____

20 stars	4	_______	20 ÷ 4 = _____
21 apples	7	_______	21 ÷ 7 = _____
30 dots	6	_______	30 ÷ 6 = _____

SECTION 10

Quiz Time! ■

Let's see how much you've learned! Circle the correct answer.

QUIZ TIME!

How many sweets does each child get if 12 sweets■are shared among 4 children?

A. 3
✓ CORRECT

B. 4

QUIZ TIME!

How many groups of 5 pencils are there in 15 pencils?

A. 2

B. 3
✓ CORRECT

QUIZ TIME!

What is the name of the ÷ symbol?

A. Quotient

B. Obelus
✓ CORRECT

QUIZ TIME!

In 20 ÷ 4 = 5, what is the QUOTIENT?

A. 20

B. 5
✓ CORRECT

QUIZ TIME!

Which number is the DIVISOR in 18 ÷ 6 = 3?

A. 6
✓ CORRECT

B. 3

QUIZ TIME!

If 3 × 4 = 12, what is 12 ÷ 4?

A. 3
✓ CORRECT

B. 4

Activity Answer Key

Activity 1 Answers:	12÷4=3 | 20÷5=4 | 16÷4=4 | 18÷6=3 | 24÷8=3
Activity 2 Answers:	15÷5=3 | 20÷4=5 | 21÷7=3 | 30÷6=5

BRILLIANT! YOU DID IT! Keep Practising Division with Friends! ■
