

■ AI — IS IT FAIR?

AI Ethics Lesson for Grade 1 | Planrs Academy

What students will learn:

- What is Artificial Intelligence (AI)?
- What does 'fair' mean?
- How AI can be unfair when it doesn't learn from everyone
- What YOU can do when AI seems unfair

■ Meet Chhotu Robot — Your Friendly AI Friend!

"Good day, everyone! I am Chhotu. I am an AI — a smart computer! I learn from examples. But sometimes... I make mistakes."

■ What Is AI?

AI is like a very smart computer friend! It **learns by looking at lots and lots of examples**. Just like you learn by doing things over and over — reading, writing, counting — AI learns the same way!

■ What Does FAIR Mean?

- Everyone gets a turn!
- Everyone is treated the same.
- No one is left out.
- When we share and include everyone — that is being FAIR!

■ The Laddoo Story

It is Diwali time! Nani gives each cousin the **same number** of laddoos — two each, no more, no less. All cousins smile. Everyone is happy! ■

One cousin gets a **whole box** of laddoos. Others get nothing at all. Everyone feels sad and left out. ■

■ The Kho-Kho Game — NOT FAIR

■ The teacher always picks the **same three students** to play. Other children are never picked. That feels bad — NOT FAIR! Everyone deserves a turn to play and have fun! ■

■ How Does AI Learn?

Chhotu says: "I learn by looking at examples! The more examples I see, the smarter I get."

Just like you practice your ABCs every day — practice makes perfect! But here's the problem: if AI only learns from **SOME** people, it might not work well for **EVERYONE**.

■ When AI Is Not Fair — Real Examples

■ The Story App Problem	■ The Camera Mistake
KahaniBot only learned stories from big cities. When a village child asked for a Panchatantra story, the app said: "Sorry, I don't know that!" The app wasn't taught ALL stories. NOT FAIR! ■	A school camera takes attendance automatically — but it was only taught using photos from one part of India . It shows "???" for some children. The camera made a mistake because it didn't learn from ALL children! ■

■ Important Message — Include All!

AI learns from people.
If people forget someone, AI forgets them too.
That's why we must include **EVERYONE**! ■

■ What Can YOU Do?

■■ **NOTICE!** If a computer app does something strange, look carefully at what it is doing. Your eyes and brain are very smart too!

■ **QUESTION!** It is okay to say: "That does not seem right!" When something feels unfair or strange, speak up! Your voice matters.

■■ **TELL SOMEONE!** Tell a trusted grown-up when something seems wrong. Talk to your parent, teacher, or didi — they will listen and help you.

■ Remember These 3 Things!

1■■ AI is a smart computer that **LEARNS** from examples.

2■■ If AI doesn't learn from **EVERYONE**, it's not fair.

3■■ **YOU** can notice, question, and tell a grown-up.

**"AI should be fair to EVERY child —
in every state, every language, every home,
across all of India!" ■■**
