

AI - TRAIN THE AI (IMAGE SORTING)

Learn to teach a
computer to sort pictures!

AI AROUND US!

AI is all around us! Can you spot it?

Face unlock on your phone knows your face! OK Google listens and helps you! Even at the sabzi mandi, vegetables get sorted into groups!

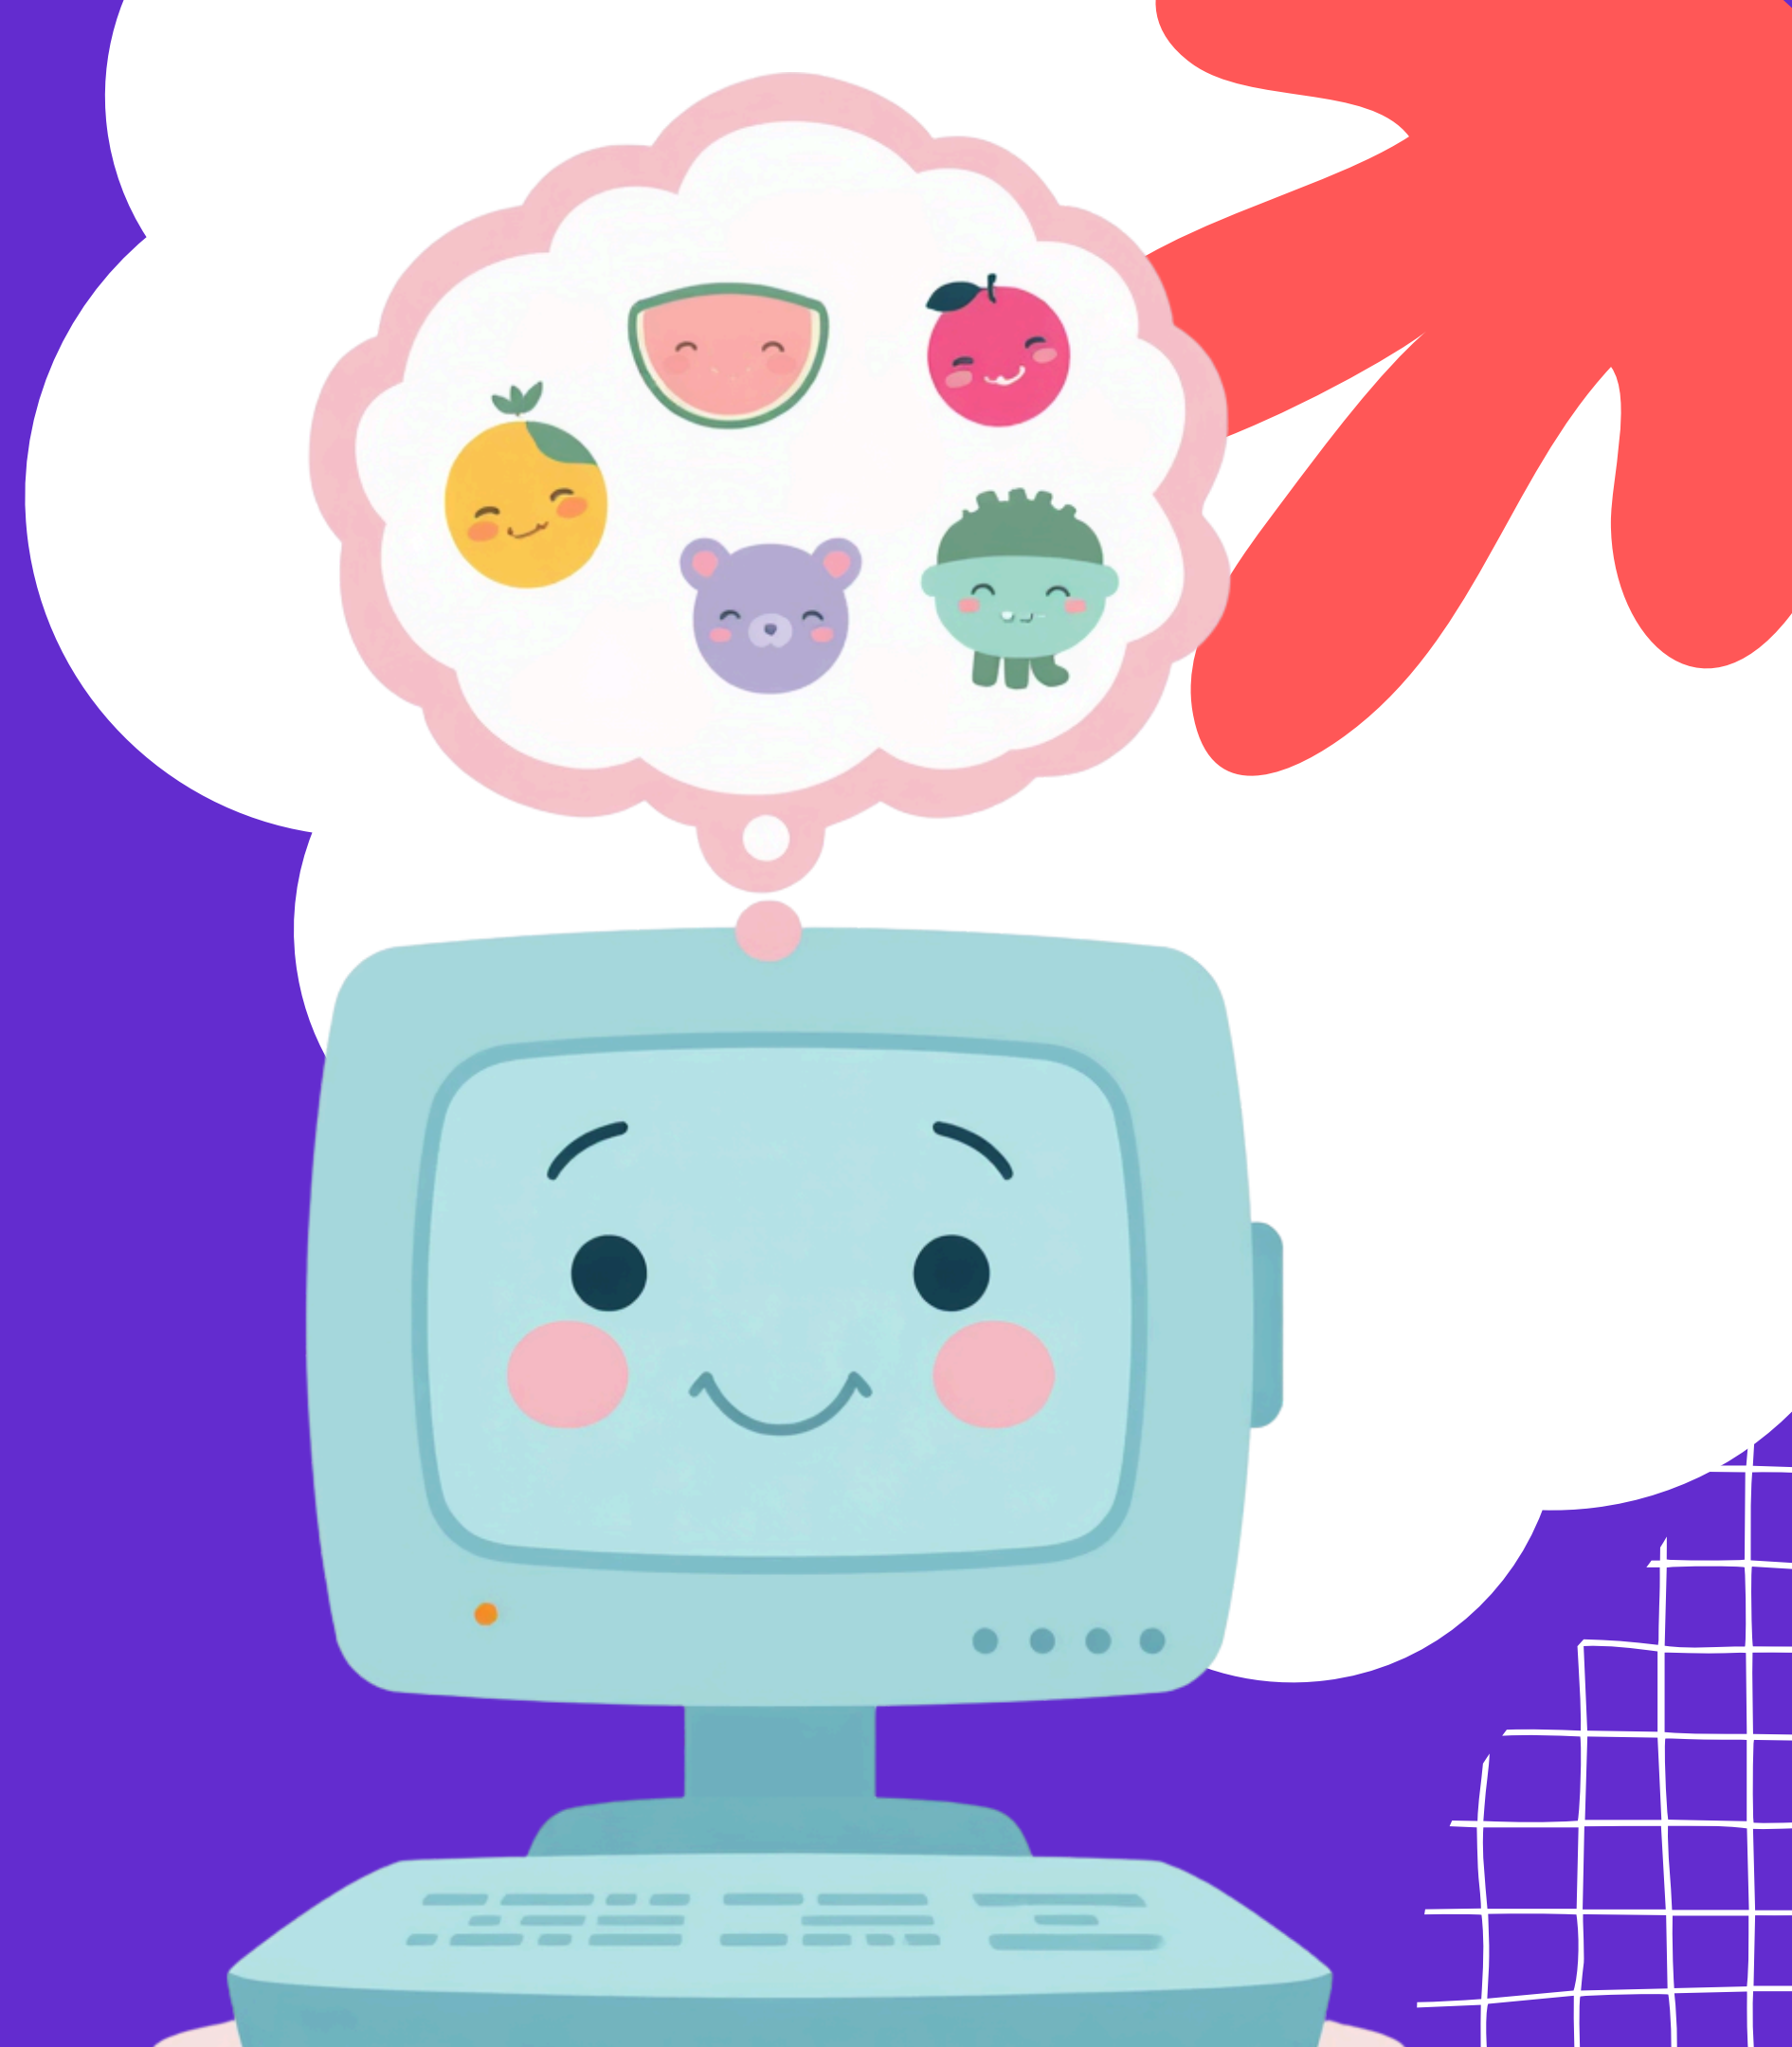

You are an AI trainer now!

WHAT IS AI?

AI is a computer that learns from examples. It gets smarter when we teach it more things!

Think about face unlock on your phone – it learns to recognise your face by seeing it many times.

The more we teach AI, the smarter it becomes!

WHAT IS IMAGE SORTING?

Sorting means putting pictures into groups. Like putting all fruits together, and all animals together!

Example: Mango and banana go in the Fruits group. Cow and dog go in the Animals group.

Let's help the AI sort!

TRAINING DATA

Teaching the AI

Training data means the examples we show the AI to teach it. More examples = smarter AI! Just like Amma sorting groceries and showing us how!

**The more pictures you show,
the smarter AI becomes!**

LABELS - NAMING THE GROUPS

Labels are names or tags we give to groups. Like calling a group 'Fruits' or 'Vehicles'. Labels help AI know what each group is!

Example: Labels on boxes for idli, roti, samosa!

Labels help AI know what each group is!

HOW AI LEARNS

Watch and Learn Together

Watch how the AI learns from the cards you sort! When you show the AI many pictures, it remembers the patterns and gets smarter at sorting them into the right groups.

More examples, smarter AI!

ACTIVITY 1 - SORT THE CARDS

Now, you try! Sort these 12 picture cards into groups. Can you put them in the right places?

Animals – cow, dog, parrot

Fruits – mango, banana, apple

Vehicles & Foods – auto, bus, idli, samosa

ACTIVITY 1 - YOUR SORTING

Here are example groups with labeled cards.
You can create your own groups and labels too! Be creative like a real AI trainer!

Animals: cow, dog

Fruits: mango,
banana

Vehicles: auto-
rickshaw, bus

Foods: idli, samosa

ACTIVITY 2 - FIX THE AI!

Sometimes AI makes mistakes when sorting pictures. That's okay! We can help the AI learn by finding and fixing the wrong ones.

Can you find the wrong pictures
and help fix them?

Let's help the AI get better!

FIND AND FIX MISTAKES!

Help the AI Learn Better

Look at these mistakes the AI made! A cow ended up in the Fruits group, and a mango was placed with Vehicles. Can you spot what went wrong?

Great job! You helped the AI learn from errors.

WRAP-UP: AI IN REAL LIFE

You Helped AI Learn Just Like These!

AI is everywhere around us! Google Photos groups your pictures, spam filters keep bad emails away, and face unlock knows your face.

OK Google: Listens and answers your questions!

Sabzi Mandi: Sorts vegetables into groups.

Kitchen Dabbas: Labels help find spices quickly.

YOU ARE AN AI TRAINER!

You did amazing work today! You taught the AI to sort pictures into groups. Now you know how AI learns from examples. Keep exploring and teaching!

**KEEP TEACHING,
KEEP LEARNING!**

Thank you! Ask questions or share your stories!
