

HTML BASICS

For Young Creators

Let's build a digital scrapbook! 

Meet Kabir and Rhea!

Kabir and Rhea want to make a super special digital birthday card for their Dadi's birthday! 🎂

They want it to look just like a real paper scrapbook. They want to show a **list of sweets** and a lovely **family photo**, but right on a computer screen!

But how do we tell a computer to show these things? Let's find out together!

From Paper to Webpage

Think of a webpage as a magic, digital scrapbook! ✨

What are Tags?

When you make a paper scrapbook, you use glue to paste photos and a pen to write names. On a computer, we use special words called **tags**! Tags tell the computer exactly what to show on our screen.

Paper Scrapbook

Uses glue and markers!

Digital Webpage

Uses magical HTML tags!

What is a List?

Dadi goes to the local *kirana shop* (grocery store) and always carries a shopping list bag! Let's see how that works in HTML.

The Shopping Bag Tag

`<ul>` stands for **U**nordered **L**ist. Think of it as an empty shopping bag! It holds all your items safely together.

The List Item Tag

`<li>` stands for **L**ist **I**tem. Each single treat or item you put inside the bag gets its own little `<li>` tag!

Dadi's Kirana List

Here is the shopping list Dadi wrote down for her kitchen items:

Grocery Bag List:

- Maggi noodles
- Fresh Milk
- Sweet Mangoes

Now, let's learn how to type this list so the computer can understand it!

Let's Code a List!

To build our list block, we follow three simple steps:

- 1 **Open the shopping bag:** Type `<ul>` to start.
- 2 **Drop in your treats:** Put your words inside `<li>` and `</li>` tags!
- 3 **Close the bag tight:** Type `</ul>` at the end so nothing falls out.

This is exactly how it looks:

```
<ul>
  <li>Sweet Mangoes</li>
  <li>Crunchy Murukku</li>
</ul>
```

Pop Quiz!

Which tag opens our digital list bag?

(A)

<list>

Hmm, is there a tag called list? Check your notes carefully!

(B)

Yes! That is the correct answer! It starts our list bag! 🎉

(C)

<bag>

Think carefully, we call it an unordered list bag!

The Magic Photo Frame

Now Rhea wants to show a cute family photo on the webpage card. How do we hold a picture?

The Image Tag: `<img>`

The `<img>` tag is like a magic photo frame on your wall! It reserves a nice spot on your webpage to show any image file you like.

The Source Key: `src`

But an empty frame needs a photo! The `src` attribute acts like a **photo drawer** helper. It tells the computer exactly where the picture file is kept.

How to Show a Picture

Let's put the photo drawer attribute inside our image tag using quotes:

```

```

★ Cool Secret Rule!

The **** tag is super special. It does **NOT** need a closing tag! It is a self-closing tag. Just one single tag does the whole job all by itself!

Guided Practice: Headings

Before writing out our card items, our page needs a big, beautiful title header at the very top!

We use the `<h1>` tag to make a huge heading text. Try to trace the code format below with your finger:

```
<h1> Happy Birthday Dadi! </h1>
```

Can you say it out loud? "Open H-1, write your words, close H-1!"

Your Turn: Make a List!

Kabir wants to make a mini-list of his 3 favorite sports items. Let's build it step-by-step!

- 1 Start your main shopping bag tag at the top.
- 2 Add each sports item inside its own individual item tag.
- 3 Close the list block cleanly at the bottom.

Fill-in-the-blank practice:

```
<ul>
  <li>Cricket Bat</li>
  <li>Shiny Ball</li>
  <li>Wooden Wickets</li>
</ul>
```

Your Turn: Add an Image!

Now let's add a colorful picture card for Kabir and Rhea to show off on the webpage!

Remember, our magic photo frame needs to know the exact filename of the image. The image file is named: **"kids-playing.png"**.

How do we write it down? Let's check the frame code:

```

```

Notice that there is no ending tag here! The single magic frame tag holds the image completely.

Our Scrapbook Preview!

When we put all our code files together, the browser displays a beautiful card screen like this:

Happy Birthday Dadi!

Our Special Birthday Sweets:

- Sweet Mangoes
- Crunchy Murukku

Family Photo:

You Did It!

You just learned the basic building blocks of HTML list tags and image tags!
