

Python — Web Scraping with BeautifulSoup

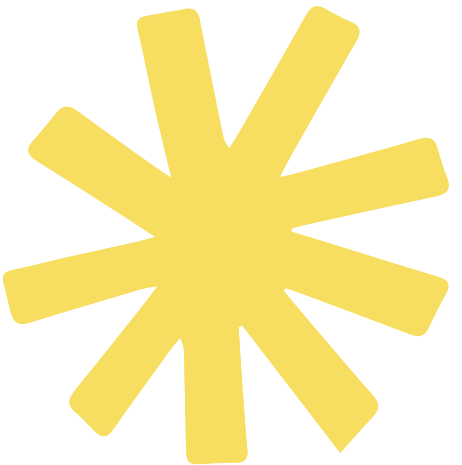

How Do We Check IPL or ISL Scores?

Copy-pasting scores is slow! Can a program do it?
Manual vs Automated Data Collection
Imagine copying every score by hand... or letting a
smart program collect it all in seconds!

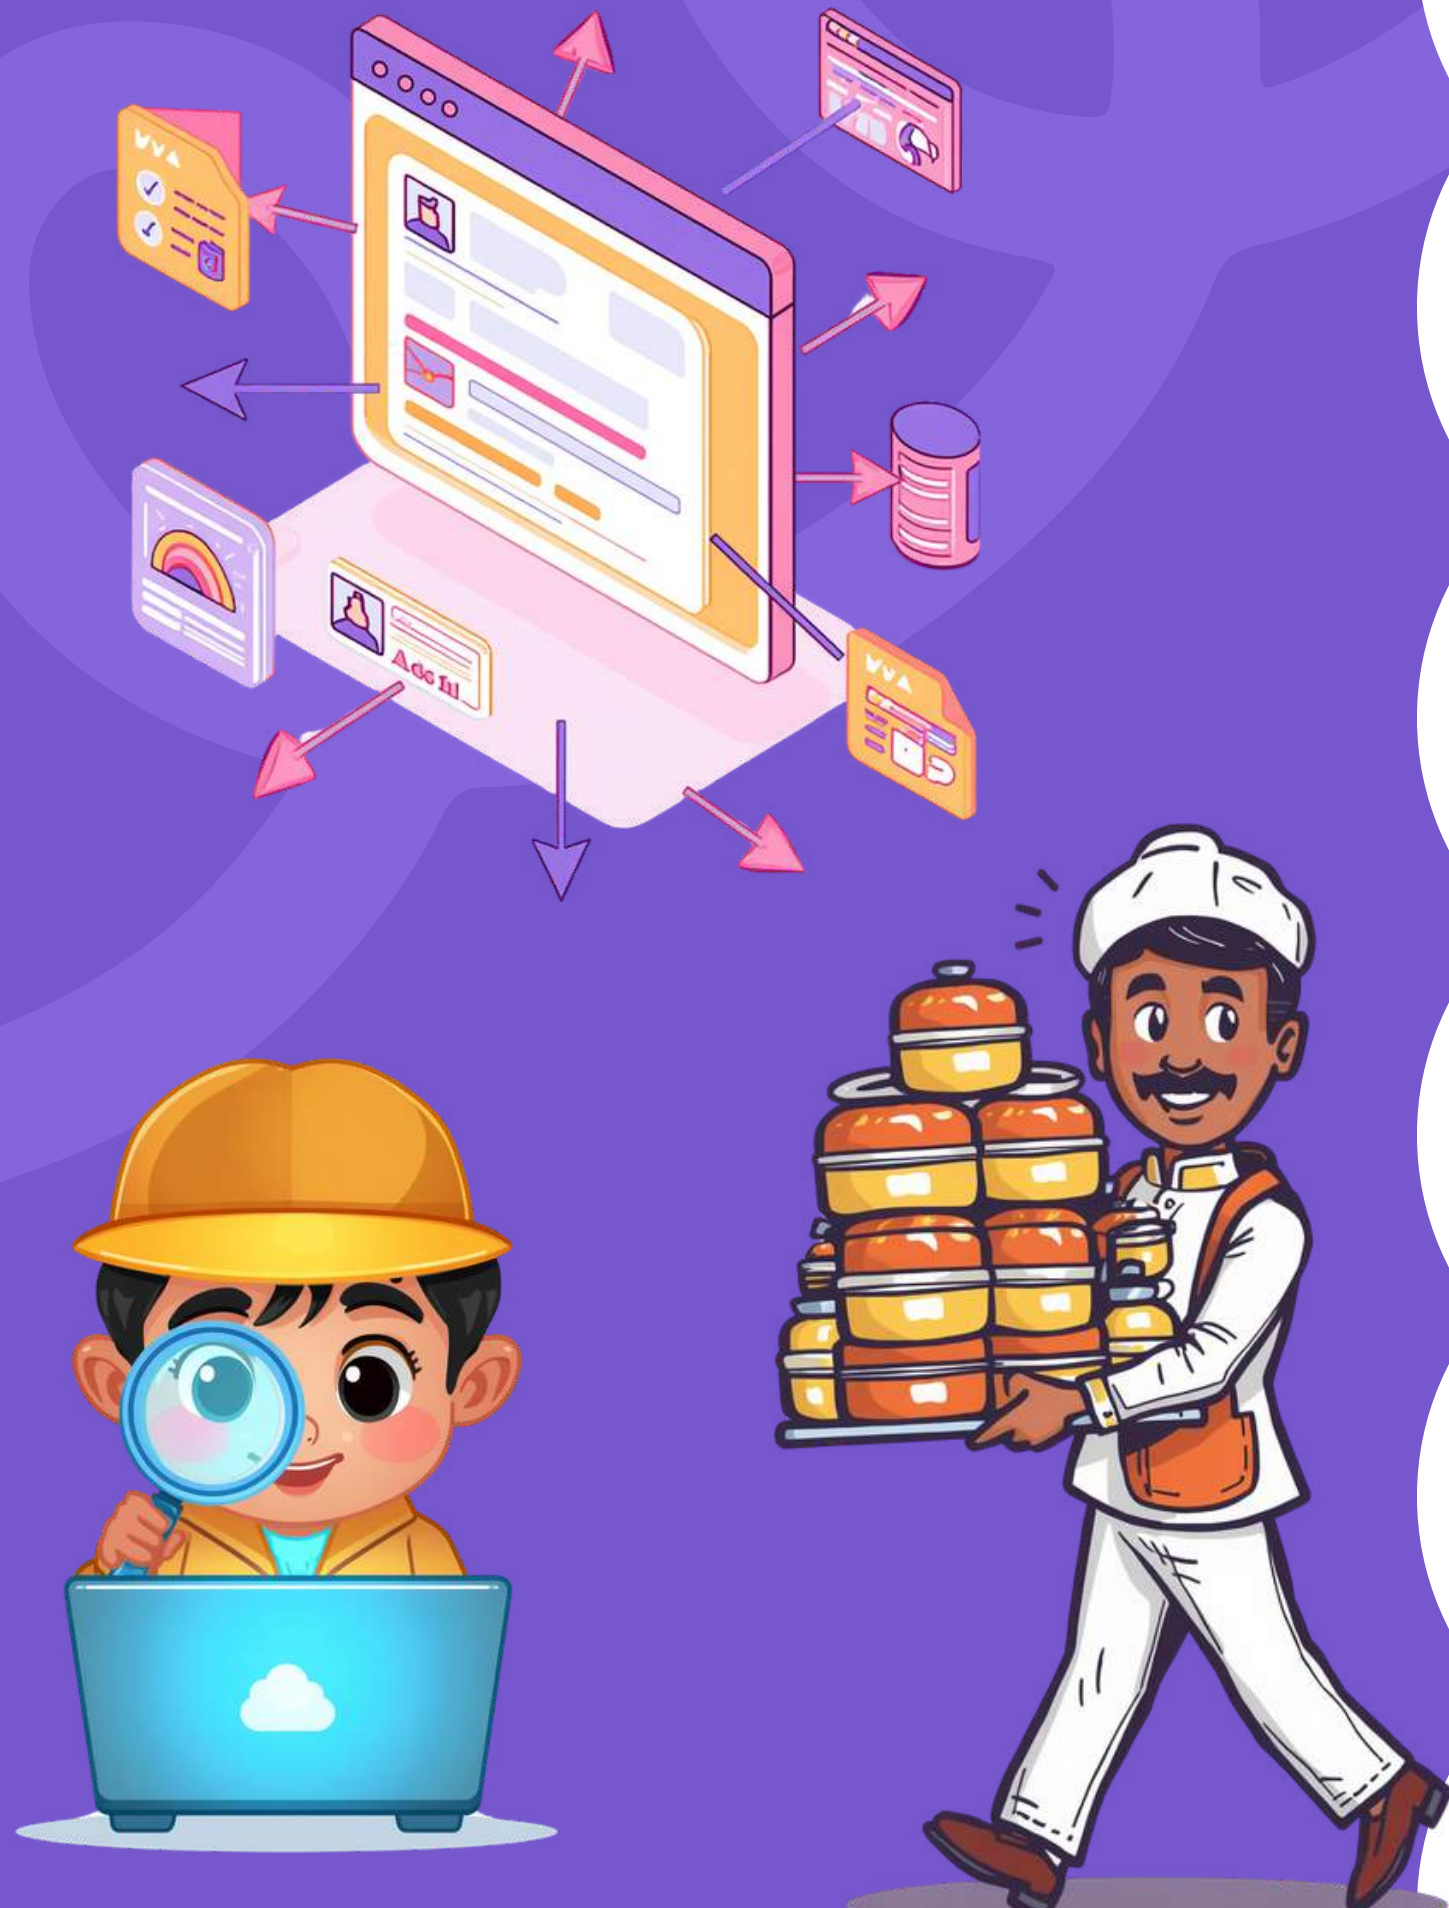

What Is Web Scraping?

Like the dabbawala picks up lunchboxes and delivers them to the right place, a program picks data from web pages and brings it to you! Web scraping means writing a program that reads a webpage and collects the information you need — automatically!

 "Program reads web pages like a detective!"

Spot the HTML Tags!

Let's find tags like `<h1>`, `<ul>`, and `<li>` on a webpage!

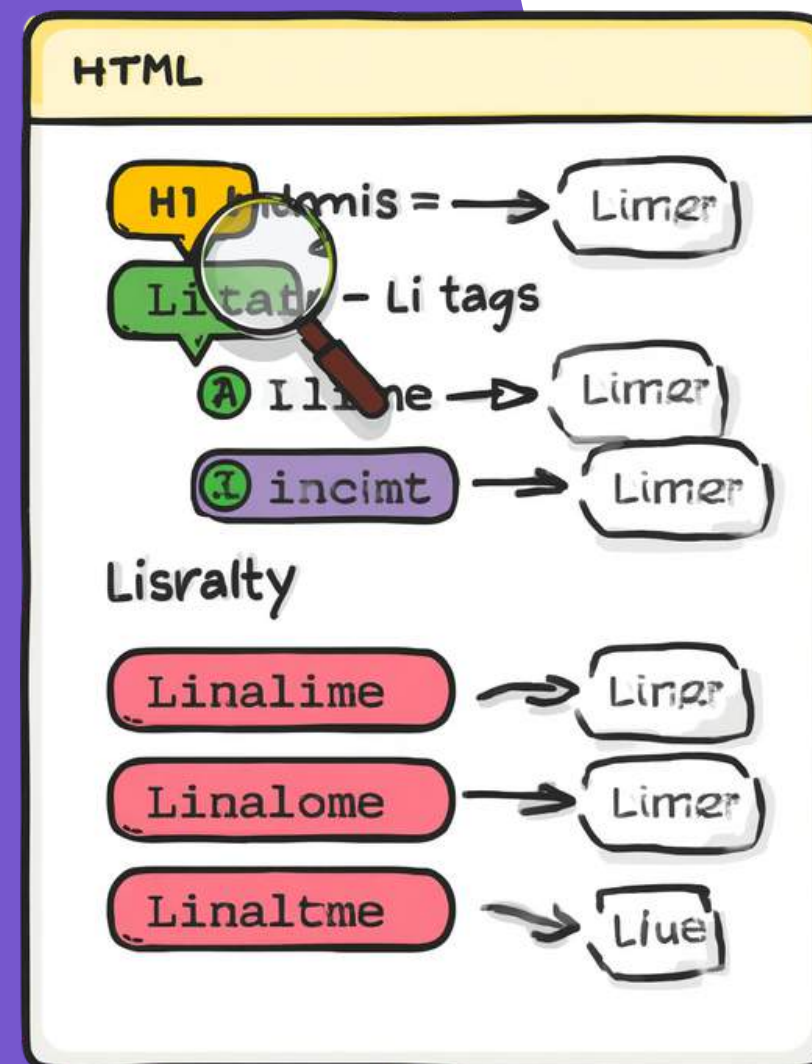

= Big Heading

= Unordered List

• = List Item

Can you spot the heading and list items on a webpage?

Meet Requests & BeautifulSoup

Requests = Postman bringing the webpage to your program!
BeautifulSoup = Detective reading and finding clues in the page.
Together, they help us fetch and explore any website with Python!

Live Coding: Fetch and Read Data

```
import requests
from bs4 import BeautifulSoup
url = "https://example.com/india-national-parks"
response = requests.get(url)
soup = BeautifulSoup(response.text, "html.parser")
headline = soup.find("h1").text
parks = soup.find_all("li")[:5]
print(headline)
for park in parks:
    print(park.text)
Extract headline & top 5 National Parks in India!
```

Find vs Find_All

`find()` gets ONE item — like picking the first mango from a basket!

`find_all()` gets MANY items — like collecting ALL mangoes at once!

Example: `soup.find("h1")` → finds the first heading

Example: `soup.find_all("li")` → finds ALL list items

 Callout: One vs Many!

Ethical Web Scraping Rules

Be polite! Follow these rules:

- ✓ Check if the site allows scraping (robots.txt)
- ✓ Don't overload the website with requests
- ✓ Use data only for good purposes
- ✓ Always respect privacy and rules

Great Job! Keep Exploring!

You're a data detective now! 🎉 You learned how to fetch web pages with Requests and read data with BeautifulSoup. Keep practicing, ask questions, and explore more websites!

➡ Get ready for Session 2!
