

BUILD THE TALLEST TOWER!

PLANNERS ACADEMY | Grade 1 Maths: Measurement

Let's Measure Together!

Some towers are tall and some are short. By stacking blocks, we can learn how to compare sizes like real mathematicians!

Tall → Taller → Tallest

Short → Shorter → Shortest

Measuring Without a Ruler

Before rulers, people used hands and objects to measure. For example, Amma uses a katori to measure dosa batter! We will use blocks as our unit to count and measure.

New Words: Unit, Count, Measure

The Fair Comparison Rule

To compare towers fairly, they must start on the same flat surface. This is called the baseline. Think of Sports Day —all runners start at the same line!

Fair + Same = Baseline!

Activity: Predict, Build, Check!

1. *Predict:* Guess how many blocks tall your tower will be.
2. *Build:* Stack your blocks or books one by one.
3. *Check:* Count them out loud: "One, two, three..."

Remember: A bigger number means a taller tower!

*"Stack it up, count it right,
Build your tower tall tonight!
One, two, three - who can see?
The tallest tower belongs to ME!"*

Quiz Time!

- *Which tower is taller?*
- *How many blocks tall is your tower?*
- *What do we say if one tower is taller than another?*

Congratulations, Tower Mathematician! Keep stacking and measuring every day.
