

SESSION 1

THE DIGITAL WATCHMAN: BECOMING AN ETHICAL HACKER

THE MYSTERY OF THE VANISHING SOCIAL MEDIA ACCOUNT

Imagine waking up one day and finding your favorite social media account is gone! This happened to a student who used “123456” as their password. A sneaky hacker guessed it in seconds and took over their account. The lesson? Being “Automatic” (Alert) helps protect your accounts from digital thieves!

MEET THE THREE HATS OF HACKERS

Black Hat

The Digital Thief – breaks into systems to steal data and cause harm. Never be this!

Grey Hat

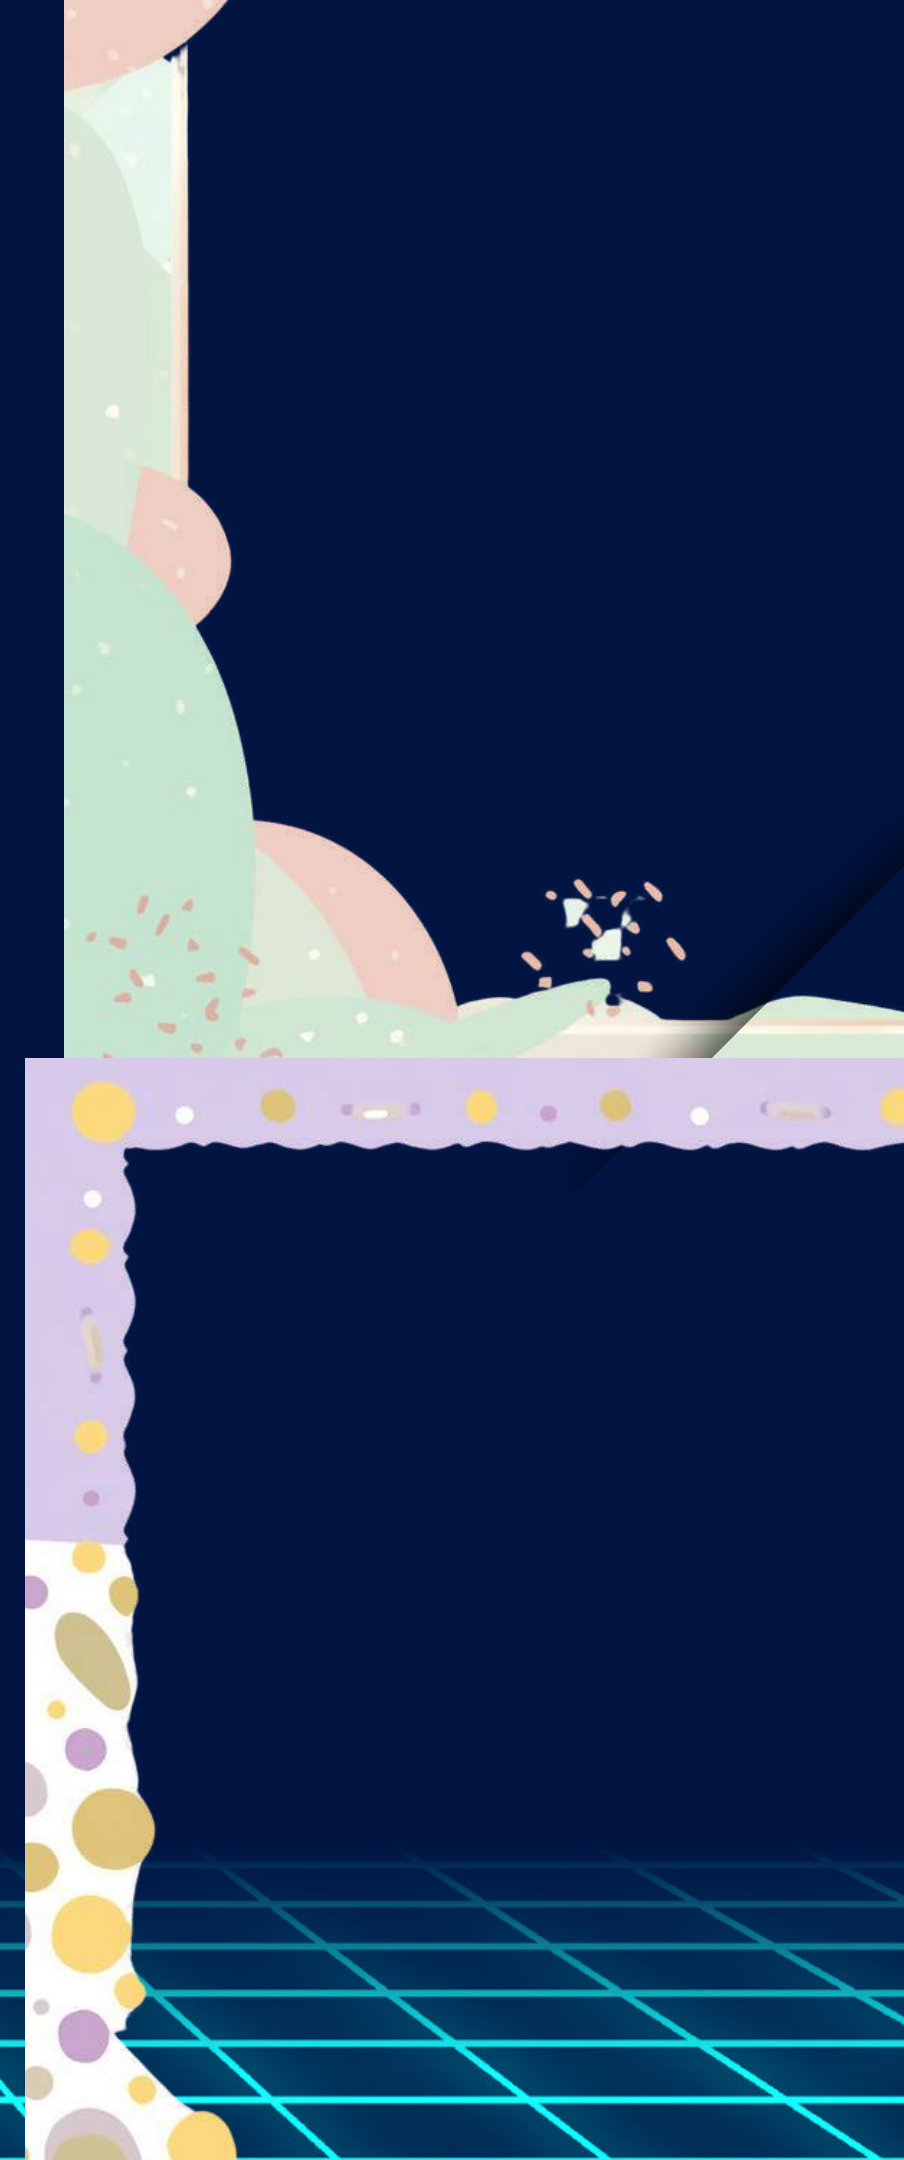

The Curious Explorer – finds weaknesses but must always follow rules and ask permission first!

White Hat

The Ethical Locksmith – like a trusted “Lock person” who tests locks with permission to keep everyone safe!

Indian Locksmith Tip

Just like a locksmith needs permission to open your home lock, ethical hackers need “Permission” to test systems!

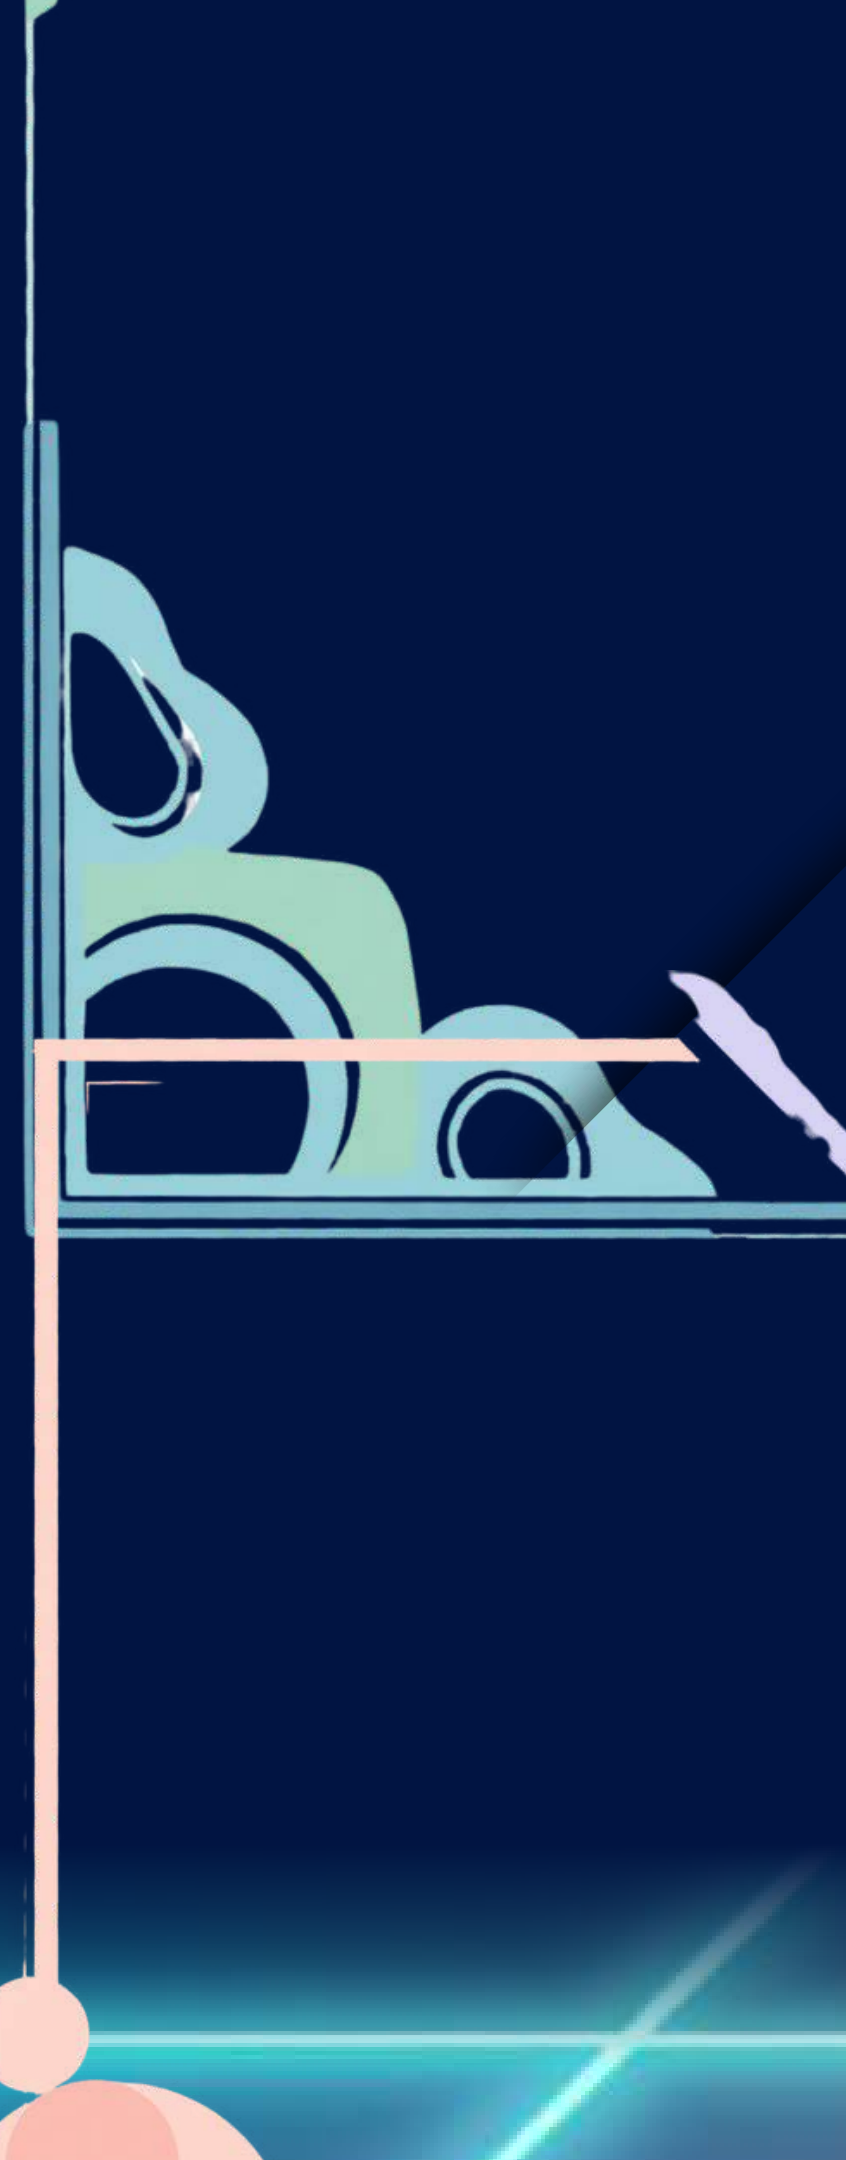

BLACK HAT VS. WHITE HAT – WHO'S WHO?

Black Hat

- ✗ Breaks locks to steal valuable information
- ✗ Causes harm to people and systems
- ✗ Illegal activity – can go to jail!

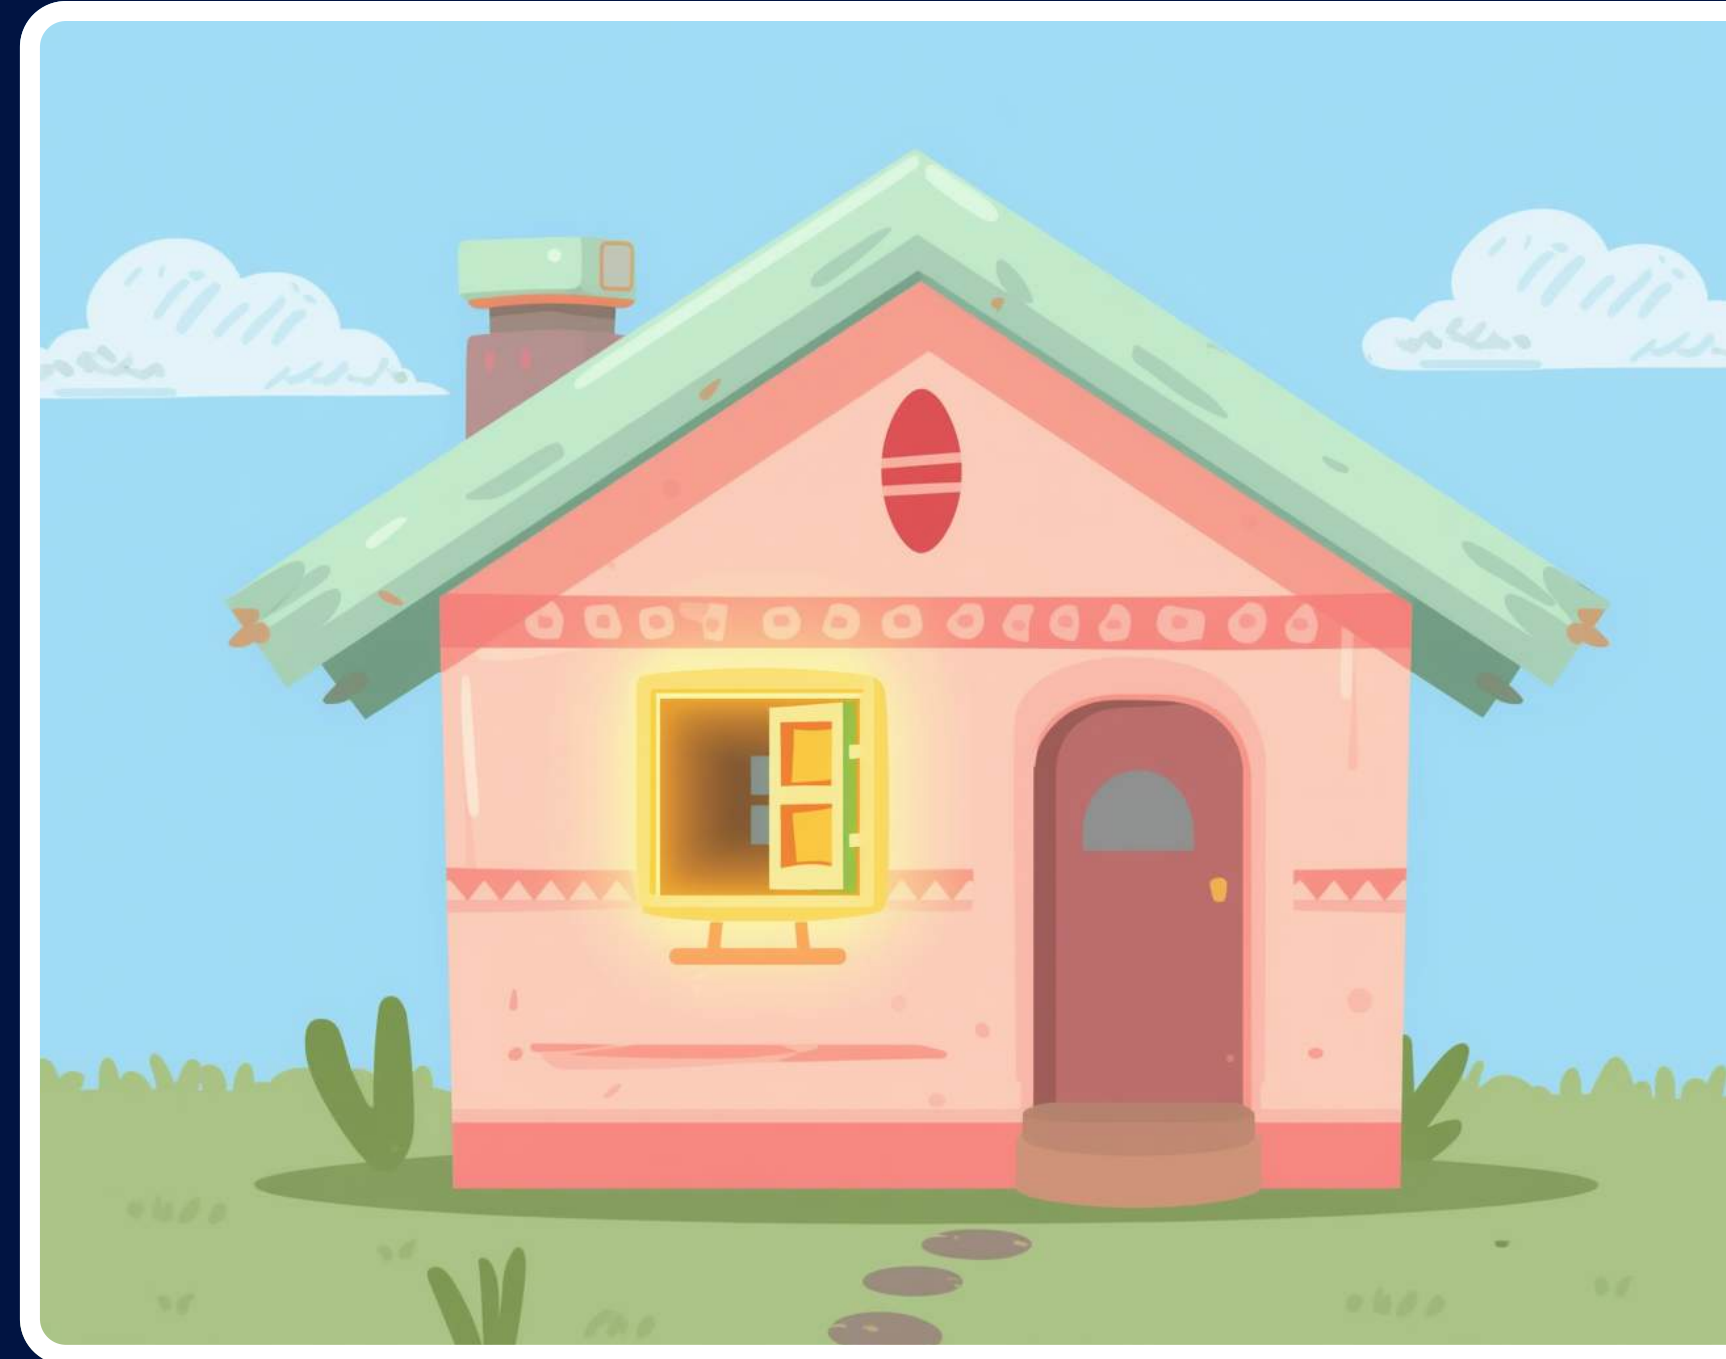

White Hat

- ✓ Tests locks with permission to find weaknesses
- ✓ Helps fix problems and keeps everyone safe
- ✓ Legal and heroic – a true Digital Watchman!

WHAT IS A VULNERABILITY?

A vulnerability is a (weakness) in a digital system that hackers can exploit. Think of it like leaving a small bathroom window open in your house – it might seem harmless, but a clever thief could use it to sneak inside! In the digital world, weak passwords and unsecured devices are like open windows waiting to be found.

SPOT THE WEAKNESS – THE DIGITAL HOUSE GAME

Time to play detective! Look at the digital house and find all the vulnerabilities – open windows, keys hidden under mats, unlocked doors. Can you spot all the weak spots before a Black Hat hacker does? Be “Automatic” (Alert) and protect the house!

VISIBLE WINDOW

UNDERK DOOR

EXAMPLES OF VULNERABILITIES

Weak Passwords

Using simple passwords like “123456” or “password” makes it easy for hackers to guess

Suspicious Links

Clicking on unknown links in emails or messages can let hackers into your device

Unlocked Devices

Leaving your phone or tablet without a lock screen is like leaving your door wide open

Unsecured Wi-Fi

Connecting to public Wi-Fi without protection can expose your personal information

THE ETHICAL HACKER'S CODE

Get Permission First

The “Permission” Rule: Always ask before testing any system or device

Respect Everyone's Privacy

Never peek at others' personal information or share their secrets

Stay Honest Always

Use your skills only for good and to help protect others

Report What You Find

Tell adults about any problems you discover so they can be fixed

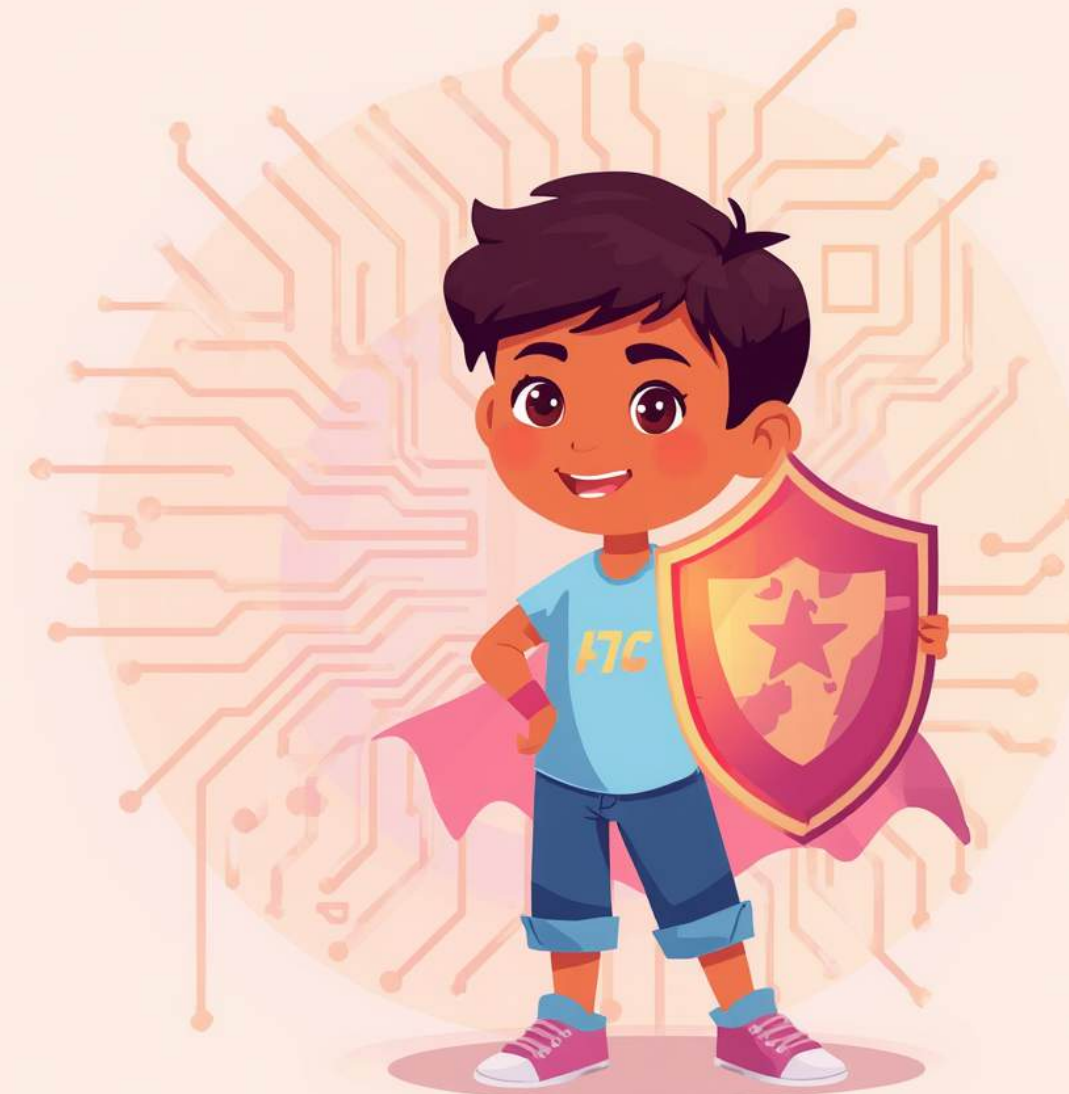

WHY PERMISSION IS THE MOST IMPORTANT

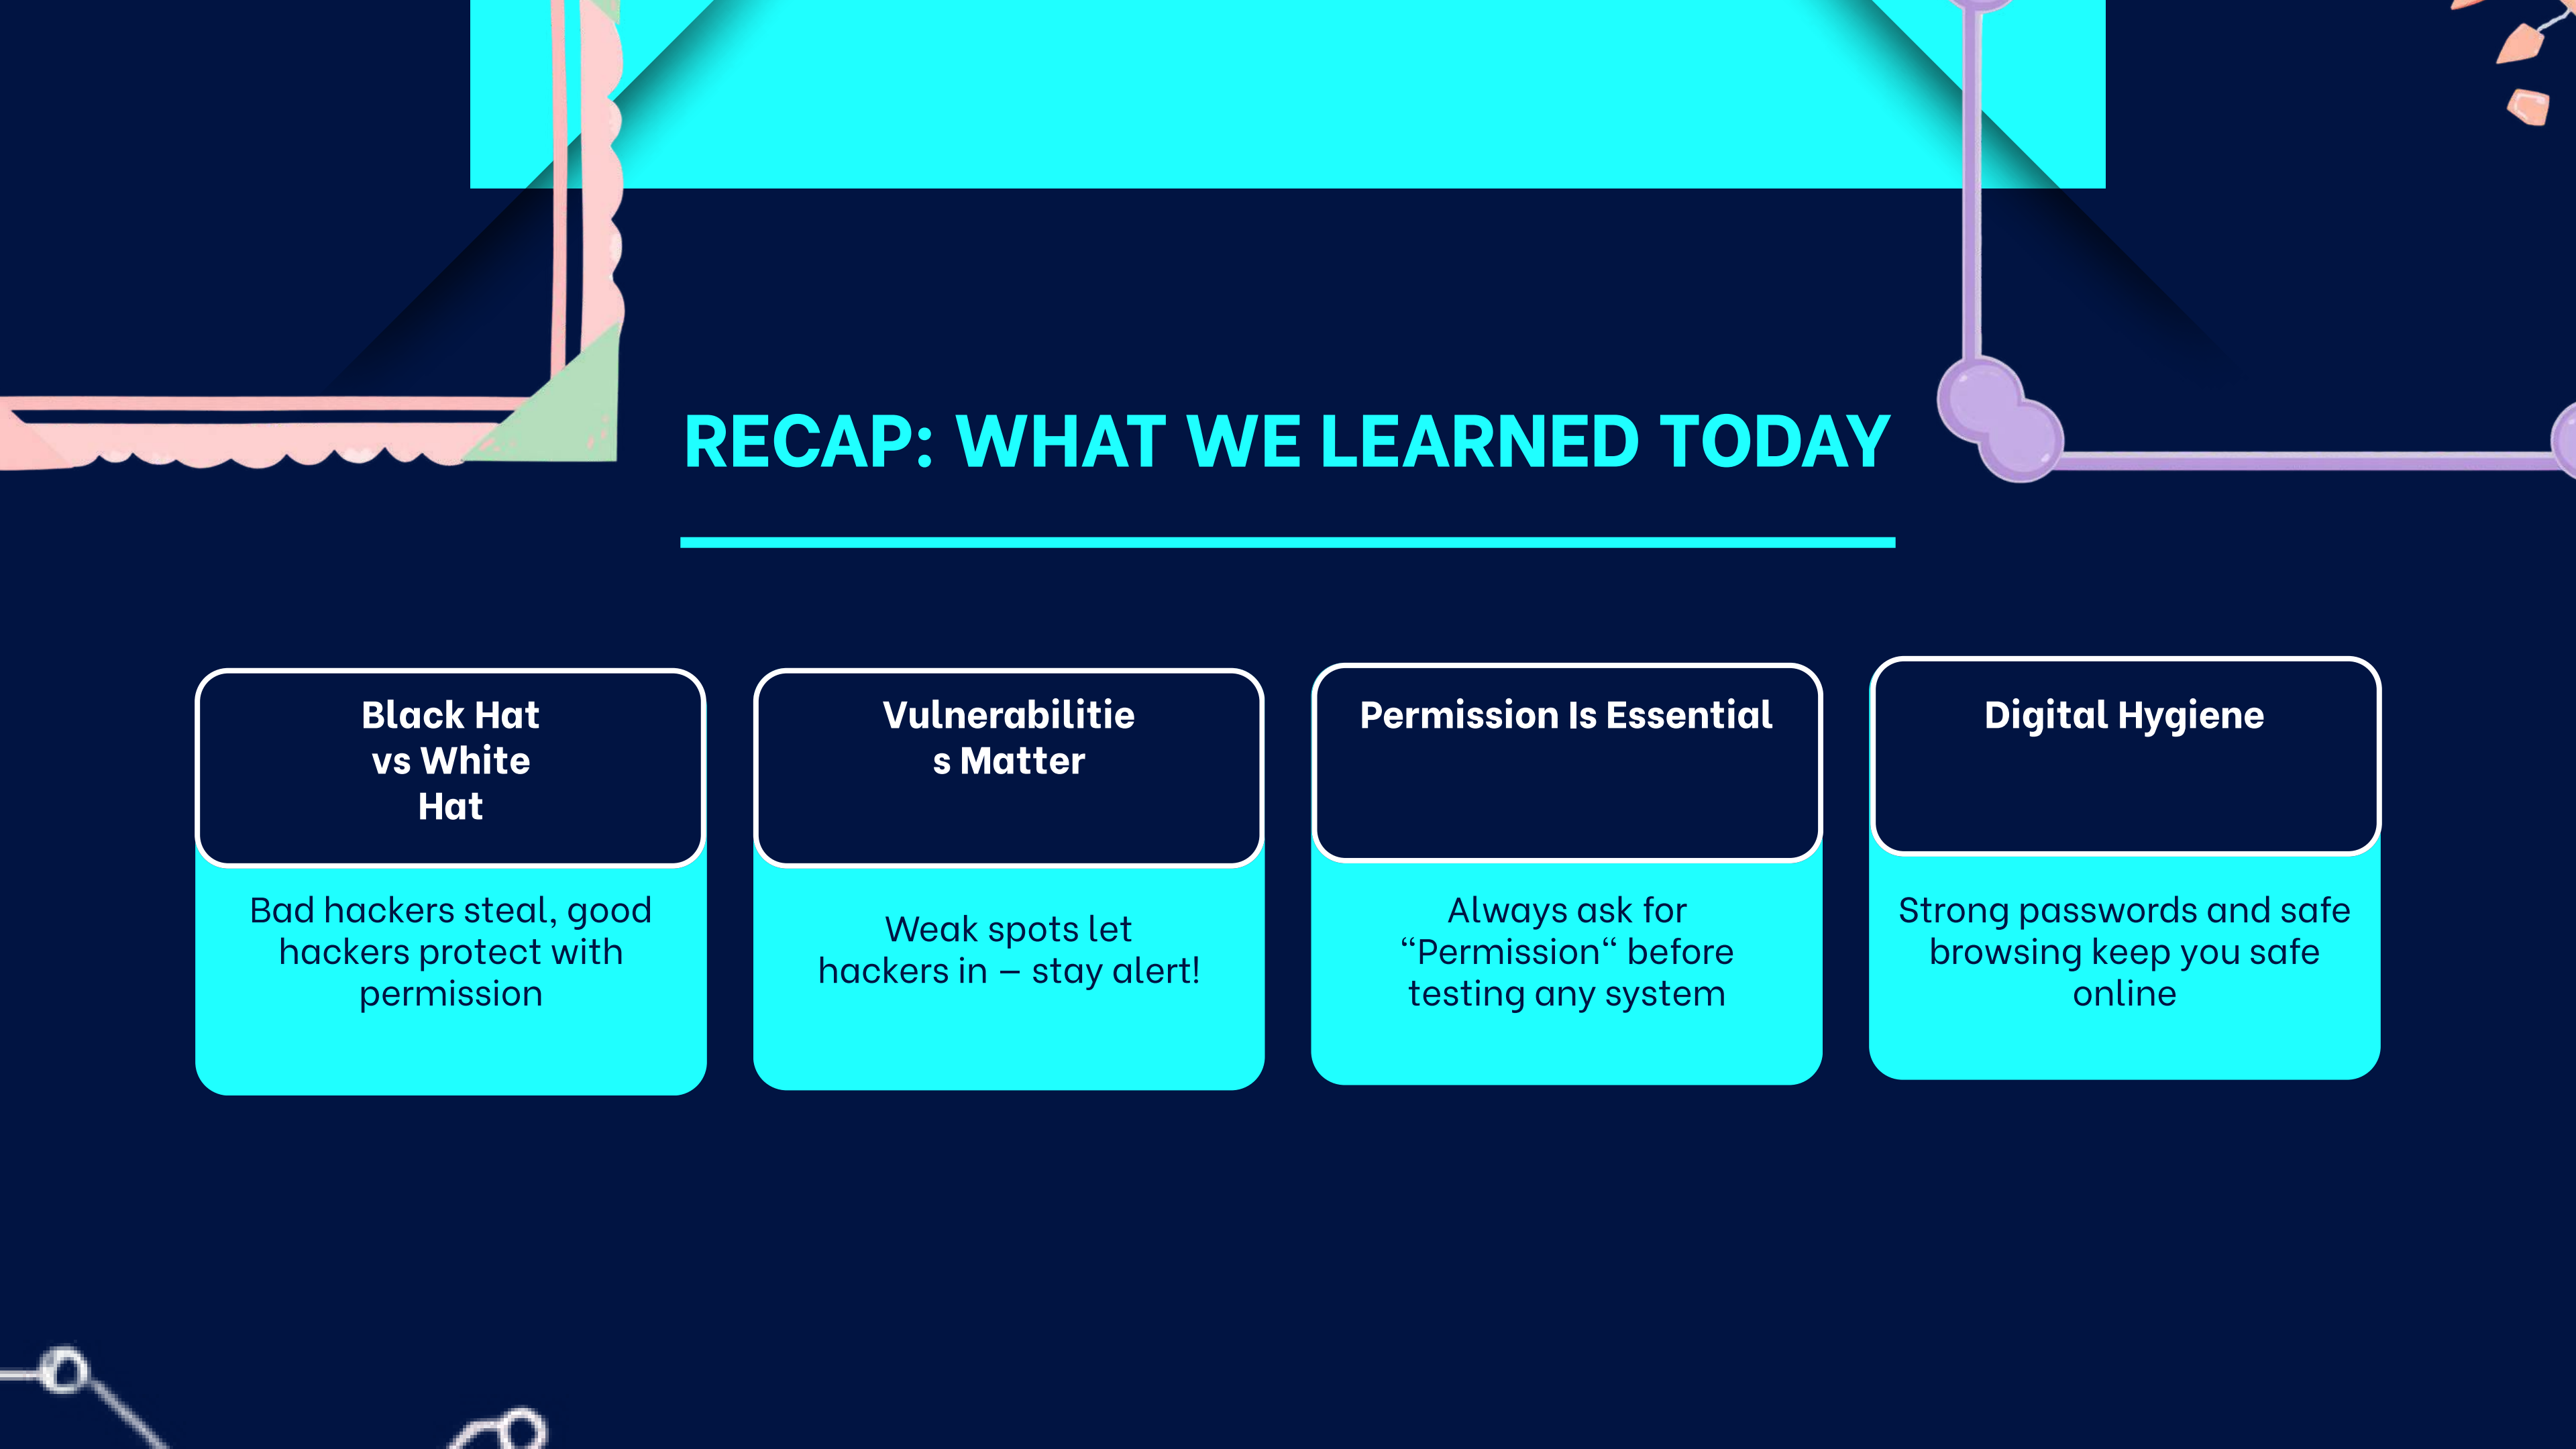

Without permission, testing someone's digital security is illegal and can get you into serious trouble! Think of it like a cricket stadium – if you sneak in without a ticket, you're trespassing. But if you're a hired security guard with a badge, you can check every corner to keep everyone safe. The (Permission) Rule is what makes ethical hackers heroes, not villains!

BEING AN ETHICAL HACKER MEANS BEING A DIGITAL WATCHMAN

Ethical hacking means using your skills for good and (Security). Just like a watchman protects a building, you can protect people and their digital homes! When you learn to spot weaknesses and report them responsibly, you become a hero who keeps everyone safe online.

RECAP: WHAT WE LEARNED TODAY

Black Hat vs White Hat

Bad hackers steal, good
hackers protect with
permission

Vulnerabilities Matter

Weak spots let
hackers in – stay alert!

Permission Is Essential

Always ask for
“Permission” before
testing any system

Digital Hygiene

Strong passwords and safe
browsing keep you safe
online

YOUR MISSION AS A DIGITAL WATCHMAN

Be (Alert)

Always stay alert online and watch for suspicious activity

Practice Digital Hygiene

Use strong passwords and browse safely every day

Never Hack Without Permission

Hacking without permission is against the law – always ask first!

Report What You Find

Tell a trusted adult about any security problems you discover

QUESTIONS?

What would you do to keep your digital house safe?
Share your ideas with the class! Think about passwords, online safety, and being a responsible Digital Watchman.

THANK YOU!
