

React – Multi-Page App with React Router

Let's Build Sharmaji's Digital Sweet Shop!

Old Way vs React Router Way

 **Slow Railway Ticket Counter**
Every time you want a new page, you wait in a long queue. The whole page reloads – just like buying a brand new ticket for every stop!

 **Express Mall Food Court**
Instant tab switching! Walk to any counter without leaving the mall. React Router moves you to new pages instantly – No waiting!

Meet React Router's Four Magic Tools

01

BrowserRouter

The mall building that holds all your pages together.

02

Routes

The metro line map showing all the stops in your app.

03

Route

Each metro stop – one Route = one page in your app.

04

Link

The magic elevator that takes you to pages instantly!

How React Router Works

Just like the Delhi Metro takes you to different stations, React Router takes you to different pages in your app!

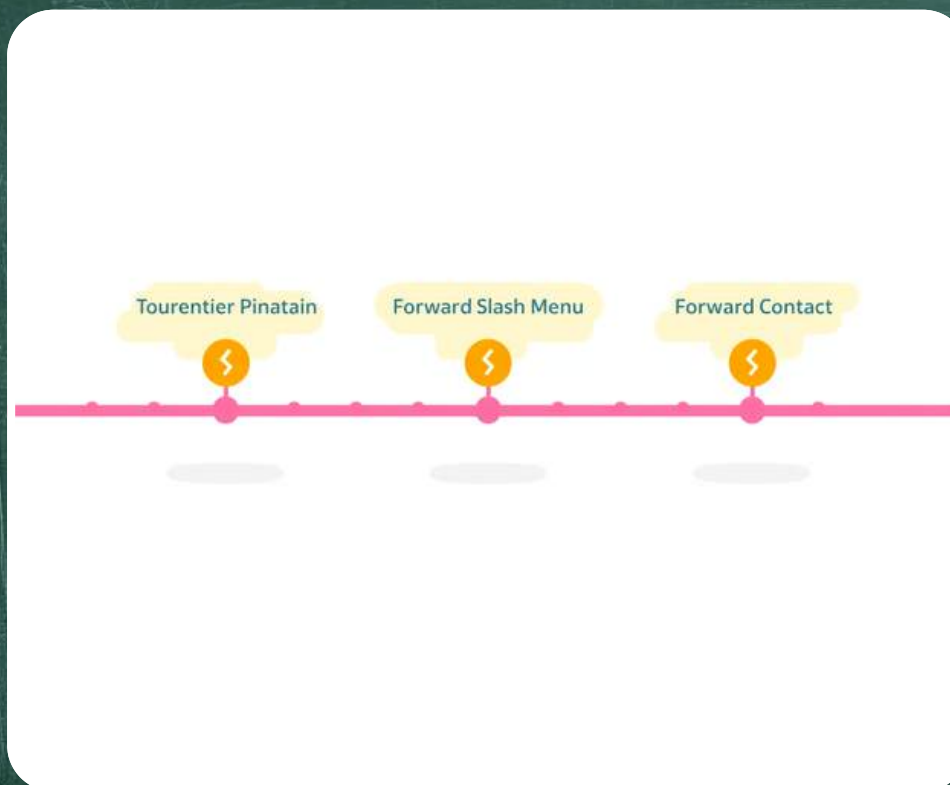

"/" → Home Station

"/menu" → Menu Station

"/contact" → Contact Station

Routes = Metro Line Map

Route = Each Stop on the Line

Welcome to Sharmaji's Digital Sweet Shop!

We will build a fun app with 3 pages:

- 🏠 Home: Welcome to the shop
 - 🍬 Menu: See all delicious sweets
 - ☎️ Contact: How to find Sharmaji
- Get ready to code your very own sweet shop app!

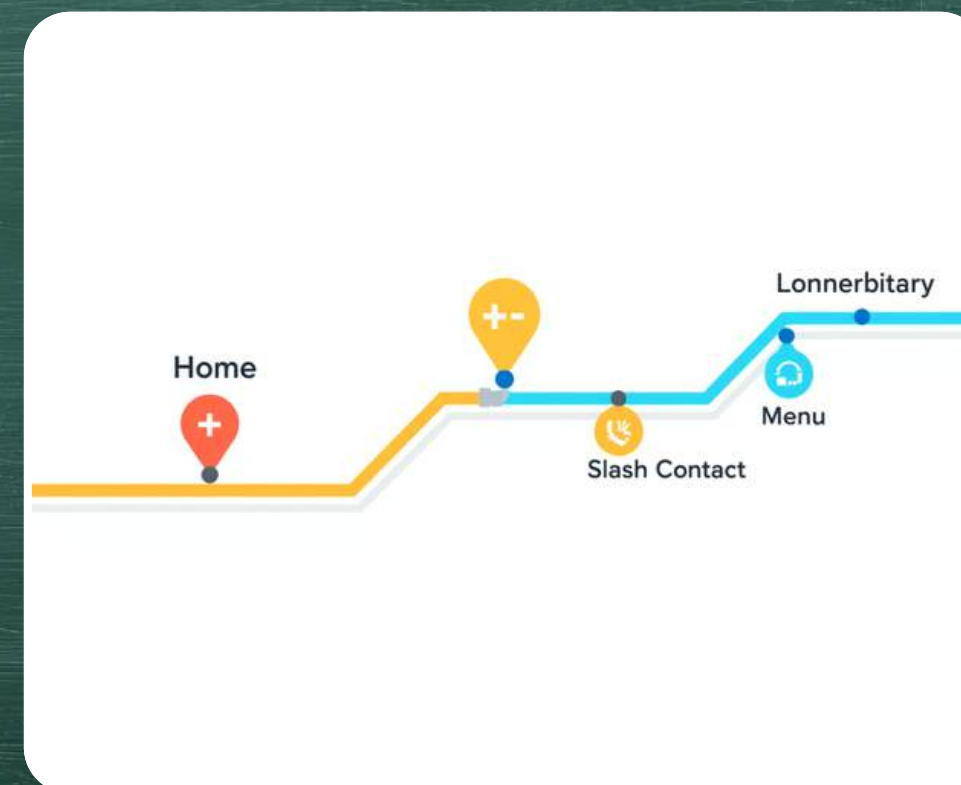

Setting Up BrowserRouter in App.jsx

```
import { BrowserRouter } from  
'react-router-dom';  
function App() {  
  return (  
  
  );  
}  
"BrowserRouter is like the mall building  
that holds all our pages together!"
```

Adding Routes & Route Components

```
import { Routes, Route }  
from 'react-router-dom';  
Routes = our metro lines.  
Route = each stop with its  
page!
```

Navigating with Link Instead of

```
import { Link } from 'react-router-dom';  
function Navbar() {  
  return (  

```

```
    Home  
    Menu  
    Contact  

```

```
  );  
}
```

- Old way: reloads the whole page!
- ✓ Link is the magic elevator – moves you instantly, no reload!

What if You Get Lost? The Auto-Driver Bug!

If you visit a page that doesn't exist, React Router shows a friendly 'Page Not Found' – like asking a helpful auto-driver for directions!

```
<Route path="*" element={} />
```

Quick Recap – What We Learned Today

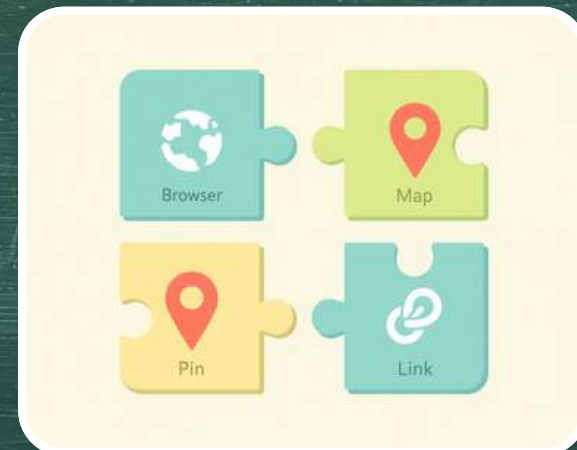

SINGLE PAGE APP

Instant tab switching – like walking inside a mall without waiting!

REACT ROUTER'S 4 PARTS

BrowserRouter, Routes, Route, and Link – the four magic tools!

LINK = SMOOTH NAV

Link keeps navigation smooth – no full page reloads, ever!

FALLBACK ROUTE

Handle missing pages with a friendly NotFound fallback route!

Rapid-Fire Quiz!

Q1: What does BrowserRouter do?

(A) Holds pages (B) Is a page (C) Loads images

Q2: Which replaces for smooth navigation?

(A) Button (B) Link (C) Route

Q3: What happens if you visit a wrong URL?

(A) Reload whole app (B) See NotFound page (C) Nothing

Raise your hand and shout your answer! 🙋

Thank You See you in next Session !
