

SCIENCE FUN LAB!

Why Does Sound Make Things Shake?

A Fun, Hands-On Guide for Grade 2 Scientists

SECRET RULE OF SOUND:

When objects vibrate (shake back and forth really fast), they make sound.

When they STOP shaking, the sound STOPS too!

Fun Bilingual Word Box

English Word	Sounds Like...	What does it mean?
Sound	Dhwani / Thonni	Anything you can hear with your ears!
Vibration	Kampan	Shaking back and forth very, very fast!
Object	Vastu	Any real thing (like a drum, a cup, or a ruler).

Let's Try 4 Super Fun Experiments!

Exp 1: The Buzzing Rubber Band

What you need: A steel tiffin box (Dabbaa) and a rubber band.

Steps:

1. Stretch the rubber band around the open tiffin box.
2. Pluck the rubber band with your finger like a guitar!

What happens? You will see the rubber band blur because it is **vibrating**, and you will hear a cool buzzing sound!

Exp 2: Dancing Salt Grains

What you need: A steel dinner plate (Thali) and some salt.

Steps:

1. Sprinkle a little bit of salt on the plate.
2. Tap the edge of the plate hard, or lean in close and sing a loud **"AHHH!"**.

What happens? The salt grains will start jumping and dancing! The plate's vibrations push the salt into the air.

Exp 3: The Magic Springy Ruler

What you need: A plastic or wooden ruler and a table.

Steps:

1. Hold half of the ruler flat on the table, letting the other half stick out into the air.
2. Push the free end down and let go quickly!

What happens? The ruler goes up and down making a loud *BOINGGG* sound. If you make the overhang shorter, it shakes faster and sounds higher!

Exp 4: Feel Your Voice Box

What you need: Just your own voice!

Steps:

1. Put your fingers gently on your throat.
2. Hum a long song like "**Mmmmm**" or "**Ommm**".

What happens? Your throat feels tickly! That's your voice box vibrating to create your voice.

My Sound Journal

Draw one thing from your house or classroom that makes a sound when it shakes (like a school bell, a phone, or a kitchen mixer!).

Finish this sentence:

The _____ makes sound because it
_____.

Quick Pop Quiz!

1. What is the science word for shaking back and forth super fast?

Answer: _____

2. What happens to the sound when a guitar string stops shaking?

Answer: _____

3. Can you feel sound vibrations with your fingers? (Yes or No?)

Answer: _____

Home Sound Hunt!

Find one vibrating sound-maker at home tonight. Touch it carefully while it makes sound (like a washing machine, a doorbell, or a running water pipe) and tell us about it tomorrow!
