

SCRATCH JR

Grade 1 Coding Adventures

My First Animated Jungle Story

Learn to code your own jungle cartoons!

WELCOME, YOUNG CODERS!

Want to Make Cartoons?

Today is a very special day because you are going to become an animator! Just like the cartoons you watch on TV, we are going to make characters move, jump, and dance using code.

What is Scratch Jr?

Scratch Jr is a magical language where you snap blocks together like Lego pieces to give instructions to your animal friends. These instructions are called **Code!**

Learning Goals for Today:

-  Explore the Stage (your animation playground).
-  Meet the Sprites (your animal actors).
-  Learn the Motion Blocks (your coding superpowers).

The Jungle Stage

This big screen is the **Stage**. This is where your story comes alive! Think of it as a theater where your characters will perform.

Meet the Sprites!

In Scratch Jr, we call our characters **Sprites**. You can choose many Indian animals from the library, like the Royal Bengal Tiger or the Indian Elephant!

How to add a friend:

Click the plus (+) button on the left to add a new character!

Fun Fact: Coding sprites is just like making Kathputli puppets come to life with invisible strings!

Set the Scene!

Every story needs a beautiful background. Let's place our Tiger in the middle of a lush Forest.

The Background Button:

Look for the picture icon at the top of the screen!

Step-by-Step:

- 1 Click the Background Button at the top of the stage.
- 2 Scroll through the library until you find the Forest or Jungle.
- 3 Tap the checkmark to set your scene!

***Pro Tip:** You can even use the "Paint" tool to add your own flowers or trees to the jungle!*

Coding Basics

To make the Tiger move, we use **Blocks**. Each color does something different.

Yellow Blocks These are "Start" blocks. They tell the code when to begin.

Blue Blocks These are "Motion" blocks. They move your friends!

The Magic Formula:

Snap the blocks together like a puzzle. If they are snapped together, the Tiger will follow the instructions in order!

Code = Instructions! Just like a recipe for a cake or instructions for a game.

Let's Code: The Pouncing Tiger

Follow these steps to make your Tiger walk and jump across the jungle.

1 Drag the Yellow Start Block (with the Green Flag) to the coding area.

2 Snap the Blue Move Right Block next to it.

3 Change the number "1" to "5" to make the Tiger walk further!

4 Snap the Jump Block at the end.

Run Your Code!

Click the Green Flag at the top of the screen.

"Arre waah!" Watch your Tiger move 5 steps and then leap into the air!

JUNGLE CHALLENGE!

Can you add more friends?

Now that Tiger is moving, can you code the Clever Monkey to jump too?

Checklist for Success:

- ✓ Did you pick a Jungle background?
- ✓ Is your Start block yellow?
- ✓ Are your Motion blocks blue?
- ✓ Did you snap them together tightly?

YOU DID IT!

You created your very first animation. You are officially a Junior Coder!
