

Maths of Cryptography — Caesar & RSA Preview

What is Cryptography?

Cryptocurrency is a digital currency that uses blockchain technology to securely store and verify transactions.

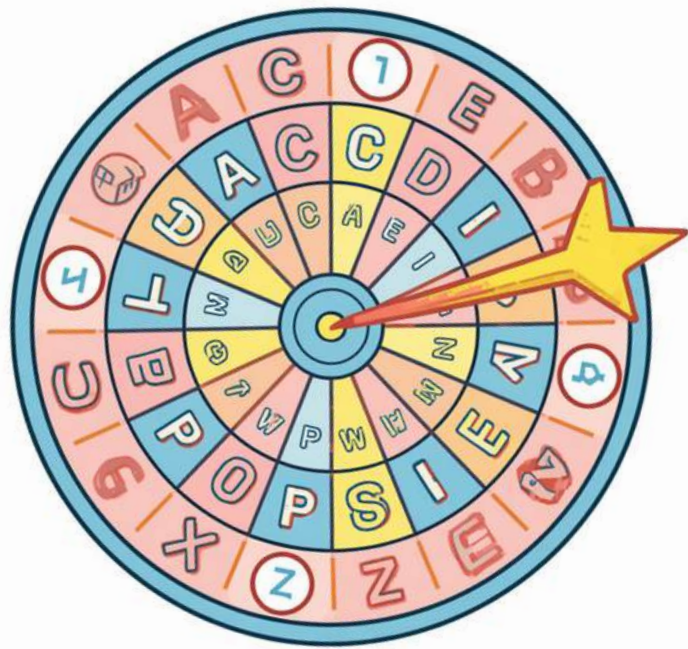

It is decentralized, meaning it operates without the control of any bank or government.

Caesar Cipher: Shift the Alphabet!

"A Caesar cipher shifts each letter by a fixed number.

Example: CAT → FDW with a shift of 3."

CAT → FDW

Shift by 3!

Wrap-Around Like a Clock!

Z → A, O → P (Shift by 1)

"When you reach the end, start again from the beginning—just like the numbers on a clock."

Example: On a clock, after 12 comes 1, not 13. This is called wrap-around.

Caesar's Secret is Not So Secret!

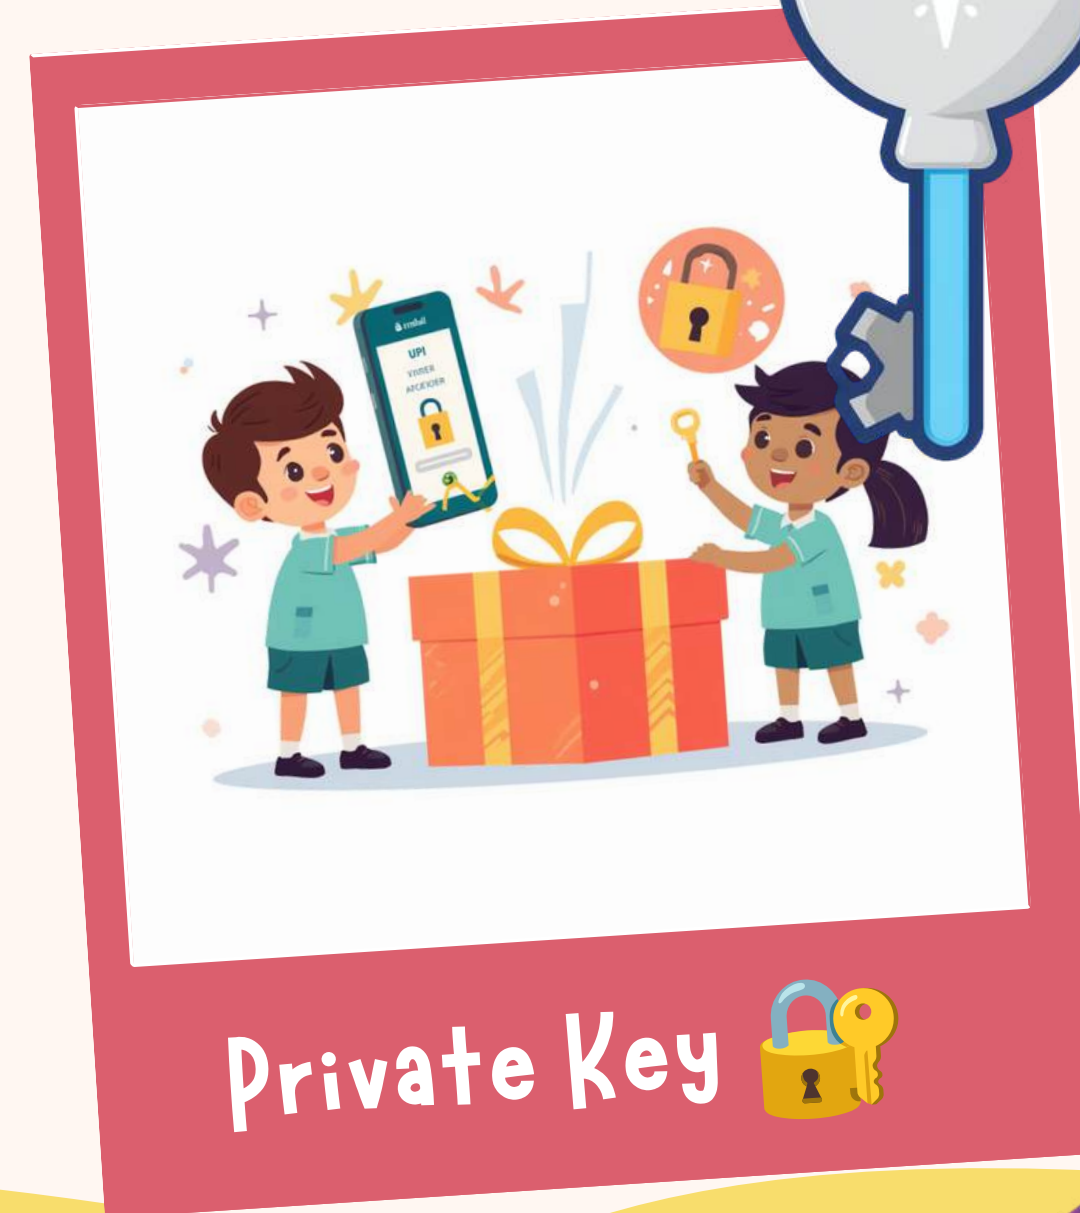

Only 25 Shifts – Spies Can Guess!

"With only 25 possible shifts, a Caesar cipher is easy for spies to crack!"

Meet RSA and the Magic Padlock!

"RSA uses a public key  to lock messages and a private key  to unlock them securely."

Cadet Challenge! Decode the Secret!

"Become a cadet and crack the
secret coded message using your
decoding skills!"

Great Job, Cadets! 🎓
