

Scratch — Make a Character Talk!

Let's bring characters to life!

Grade 2

Scratch Coding

45 Minutes

1. What is Coding?

Coding is like giving step-by-step instructions to a computer. Just like you follow rules in a game, computers follow instructions called **code**. Anyone can learn to code — even you!

Coding helps us make fun games!

Coding helps us create stories and animations!

2. Meet Scratch!

Scratch is a fun place to learn coding by making stories and games. It uses colourful **drag-and-drop blocks** — no typing needed! Just snap blocks together to create your own animations and adventures.

Stage

Sprites

Blocks Palette

The background where your story plays out. Characters that move and talk on the stage. A collection of blocks to help you create your story.

3. Today's Goal: Make a Character Talk!

We will learn how to make our character say something using the **"say" block** in Scratch. Get ready to bring your character to life! What will *your* character say? Think of something fun, funny, or kind — anything you like!

4. The Blocks Palette — Where Magic Happens!

Blocks are the instructions we snap together to make things happen! Find the colourful blocks on the left side of Scratch. Click **"Looks"** to find the special **"say"** blocks that make your character talk!

5. The "Say" Block

The **"say"** block is found in the **Looks** section of Scratch.

When you snap it into your scripts area and click the **green flag**, your character will show a **speech bubble** with your message!

You can change what it says and for how long. Try making your character say something fun!

Key Facts:

- Makes your character talk with a speech bubble.
- Found under the **Looks** category.
- You control the message AND the duration.

Example: say "Hi, friend!" for 2 seconds

6. How to Add a "Say" Block — Step by Step

Open your Scratch project and click on your sprite. Then follow these easy steps:

Step 1	Click "Looks" in the Blocks Palette
Step 2	Drag "Say Hello! for 2 seconds" to the Scripts Area
Step 3	Change the text to what your character will say!

7. Adding Sound to Your Character

Go to the **Sound blocks** (pink blocks) in Scratch. Find the **"play sound"** block and drag it to your scripts area. Now your character can make sounds while it talks!

Try it: Use the **"play sound Meow"** block! Snap it together with your **"say"** block. Add fun sounds to make your character come alive!

Putting it All Together! Snap your "say" block and "play sound" block together — your character will talk, then make a sound. That's 2 blocks working as one!

8. Practice Activity!

Open Scratch and try each challenge below. Drag your 'say' block and type something fun. You can do it — give it a go!

■ Challenge 1

Make your character say
YOUR NAME!

■ Challenge 2

Make your character say a
joke or funny sentence!

■ Challenge 3

Add a sound to your talking
character!

9. Tips for Success!

■ Take Your Time

Go slowly when dragging blocks to the scripts area. It's okay to try again if a block does not snap into place. Practice makes perfect!

⇒ Change the Text

Click on the words in the say block and type your own message. You can type anything you like!

■ Ask for Help

If you get stuck, ask your teacher or a friend. Working together makes coding even more fun!

10. What Did We Learn Today?

Coding = Instructions

Scratch Uses Colourful
Blocks

"Say" Block Makes
Characters Talk!

Coding means giving instructions to a computer. Scratch uses colourful blocks to make coding easy and fun for everyone! The **"say" block** makes your character talk. Adding sounds makes your stories even more exciting and creative!

11. Keep Exploring Scratch!

- **Move Block:** Use the "move" block to make your sprite walk across the stage. Every new block you try is a new superpower!
- **Jump / Spin:** Explore blocks like "jump", "spin", or "change colour"! Drag them into your scripts area and see what happens.

Great job, coders! You learned how to make characters talk using Scratch.

Keep exploring and have fun coding!
