

MAKE YOUR OWN PAPER!

A Journey into DIY & Sustainability

The 'Waste Paper' Story

Have you ever wondered what happens to your old school notebooks and newspapers? In India, we give this "Waste paper" to the **Kabadiwala!** [cite: 56] This is the first step in a magical cycle where old paper becomes new again. [cite: 56]

Why Do We Recycle?

Saving trees means saving our home! When we recycle, we help keep our Earth happy and protect nature. [cite: 55, 57, 100]

"Small hands can make a big difference!"

Let's Get Started!

1 The Big Tear

Before we can make new paper, we must break down the old! [cite: 62]

- Take your old newspapers and notebooks. [cite: 64]
- Use your fingers to tear the paper into **tiny pieces**. [cite: 63]
- Remember: The smaller, the better! Can you make them really tiny? [cite: 64, 65]

2 Making the Mush ('Doll')

Now it's time for some splashy science! [cite: 71]

- Add **warm water** to your bits of paper. [cite: 70]
- Use your hands to mix and mash "With force!" [cite: 71]
- Watch as the paper bits turn into a soft, squishy mush called '**Doll**'. [cite: 69, 72]

Transforming the Mush

3 The Press & Shape

This is where your paper takes its new form. [cite: 75]

- Place your squishy doll onto a strainer (channi) or a flat cloth. [cite: 77]
- Press the mush flat—press it down **"With force!"** using your hands. [cite: 76]
- Squeeze out all the excess water. Feel the texture of your new creation! [cite: 77, 78]

4 Drying & Cleanup

Patience is the secret ingredient! [cite: 82]

- Place your flat paper in a spot with plenty of **sunlight**. [cite: 84]
- Watch it dry like magic! [cite: 83]
- Don't worry about the mess—clean up your workspace so science stays fun for everyone. [cite: 84, 85]

WHY SAVE TREES?

The Indian Story

Protecting Our Heritage

In India, we have a beautiful history of loving nature. Have you heard of the **Chipko Movement**? [cite: 89]

The Chipko Movement

Brave people helped save many trees by **hugging them** to protect them from being cut down! [cite: 89]

Where Does Our Paper Come From?

Paper comes from trees ('Ped'), like those found in our magnificent **Western Ghats** and the **Himalayas**! [cite: 91, 94, 95]

- Recycling paper means fewer trees need to be cut down. [cite: 91]
- By saving trees, we save the beautiful forests and all the animals that live there. [cite: 99]

Fun Future Ideas!

Your handmade paper is ready for amazing creations! Let your imagination fly. [cite: 111, 112]

Art Time

Draw or paint a beautiful landscape on your textured paper. [cite: 104]

Gift a Card

Make colorful cards or bookmarks for your family and friends. [cite: 106]

The Rangoli Touch

Decorate your recycled paper with beautiful **Rangoli patterns** to make it extra special! [cite: 108]

What will you create next? Whatever you choose, it will be something beautiful to share! [cite: 111, 112]

YOU ARE A GREEN HERO!

Great Job!

You have successfully learned how to turn waste into something wonderful. [cite: 118] By making your own paper, you have taken a step toward protecting our Earth. [cite: 100]

Your Conservation Checklist:

- I can tear and mash paper to recycle it. [cite: 63, 71]
- I know that recycling saves trees in the Himalayas and Western Ghats. [cite: 91, 94, 95]
- I will share the story of the Chipko Movement with my friends. [cite: 89, 118]

Let's Save Trees Together! [cite: 117]

Show your family and friends your creation. Do you have any questions for your teacher?
[cite: 118]
