DATA & PICTOGRAPHS

Reading and Making Picture Graphs

Our Class Survey!

Who likes mango? Raise your hand!
Who likes banana? Raise your hand!
Who likes apple? Raise your hand!
Look at all this information we
collected — THIS is called DATA!

What is Data?

DATA = Information we collect about something!

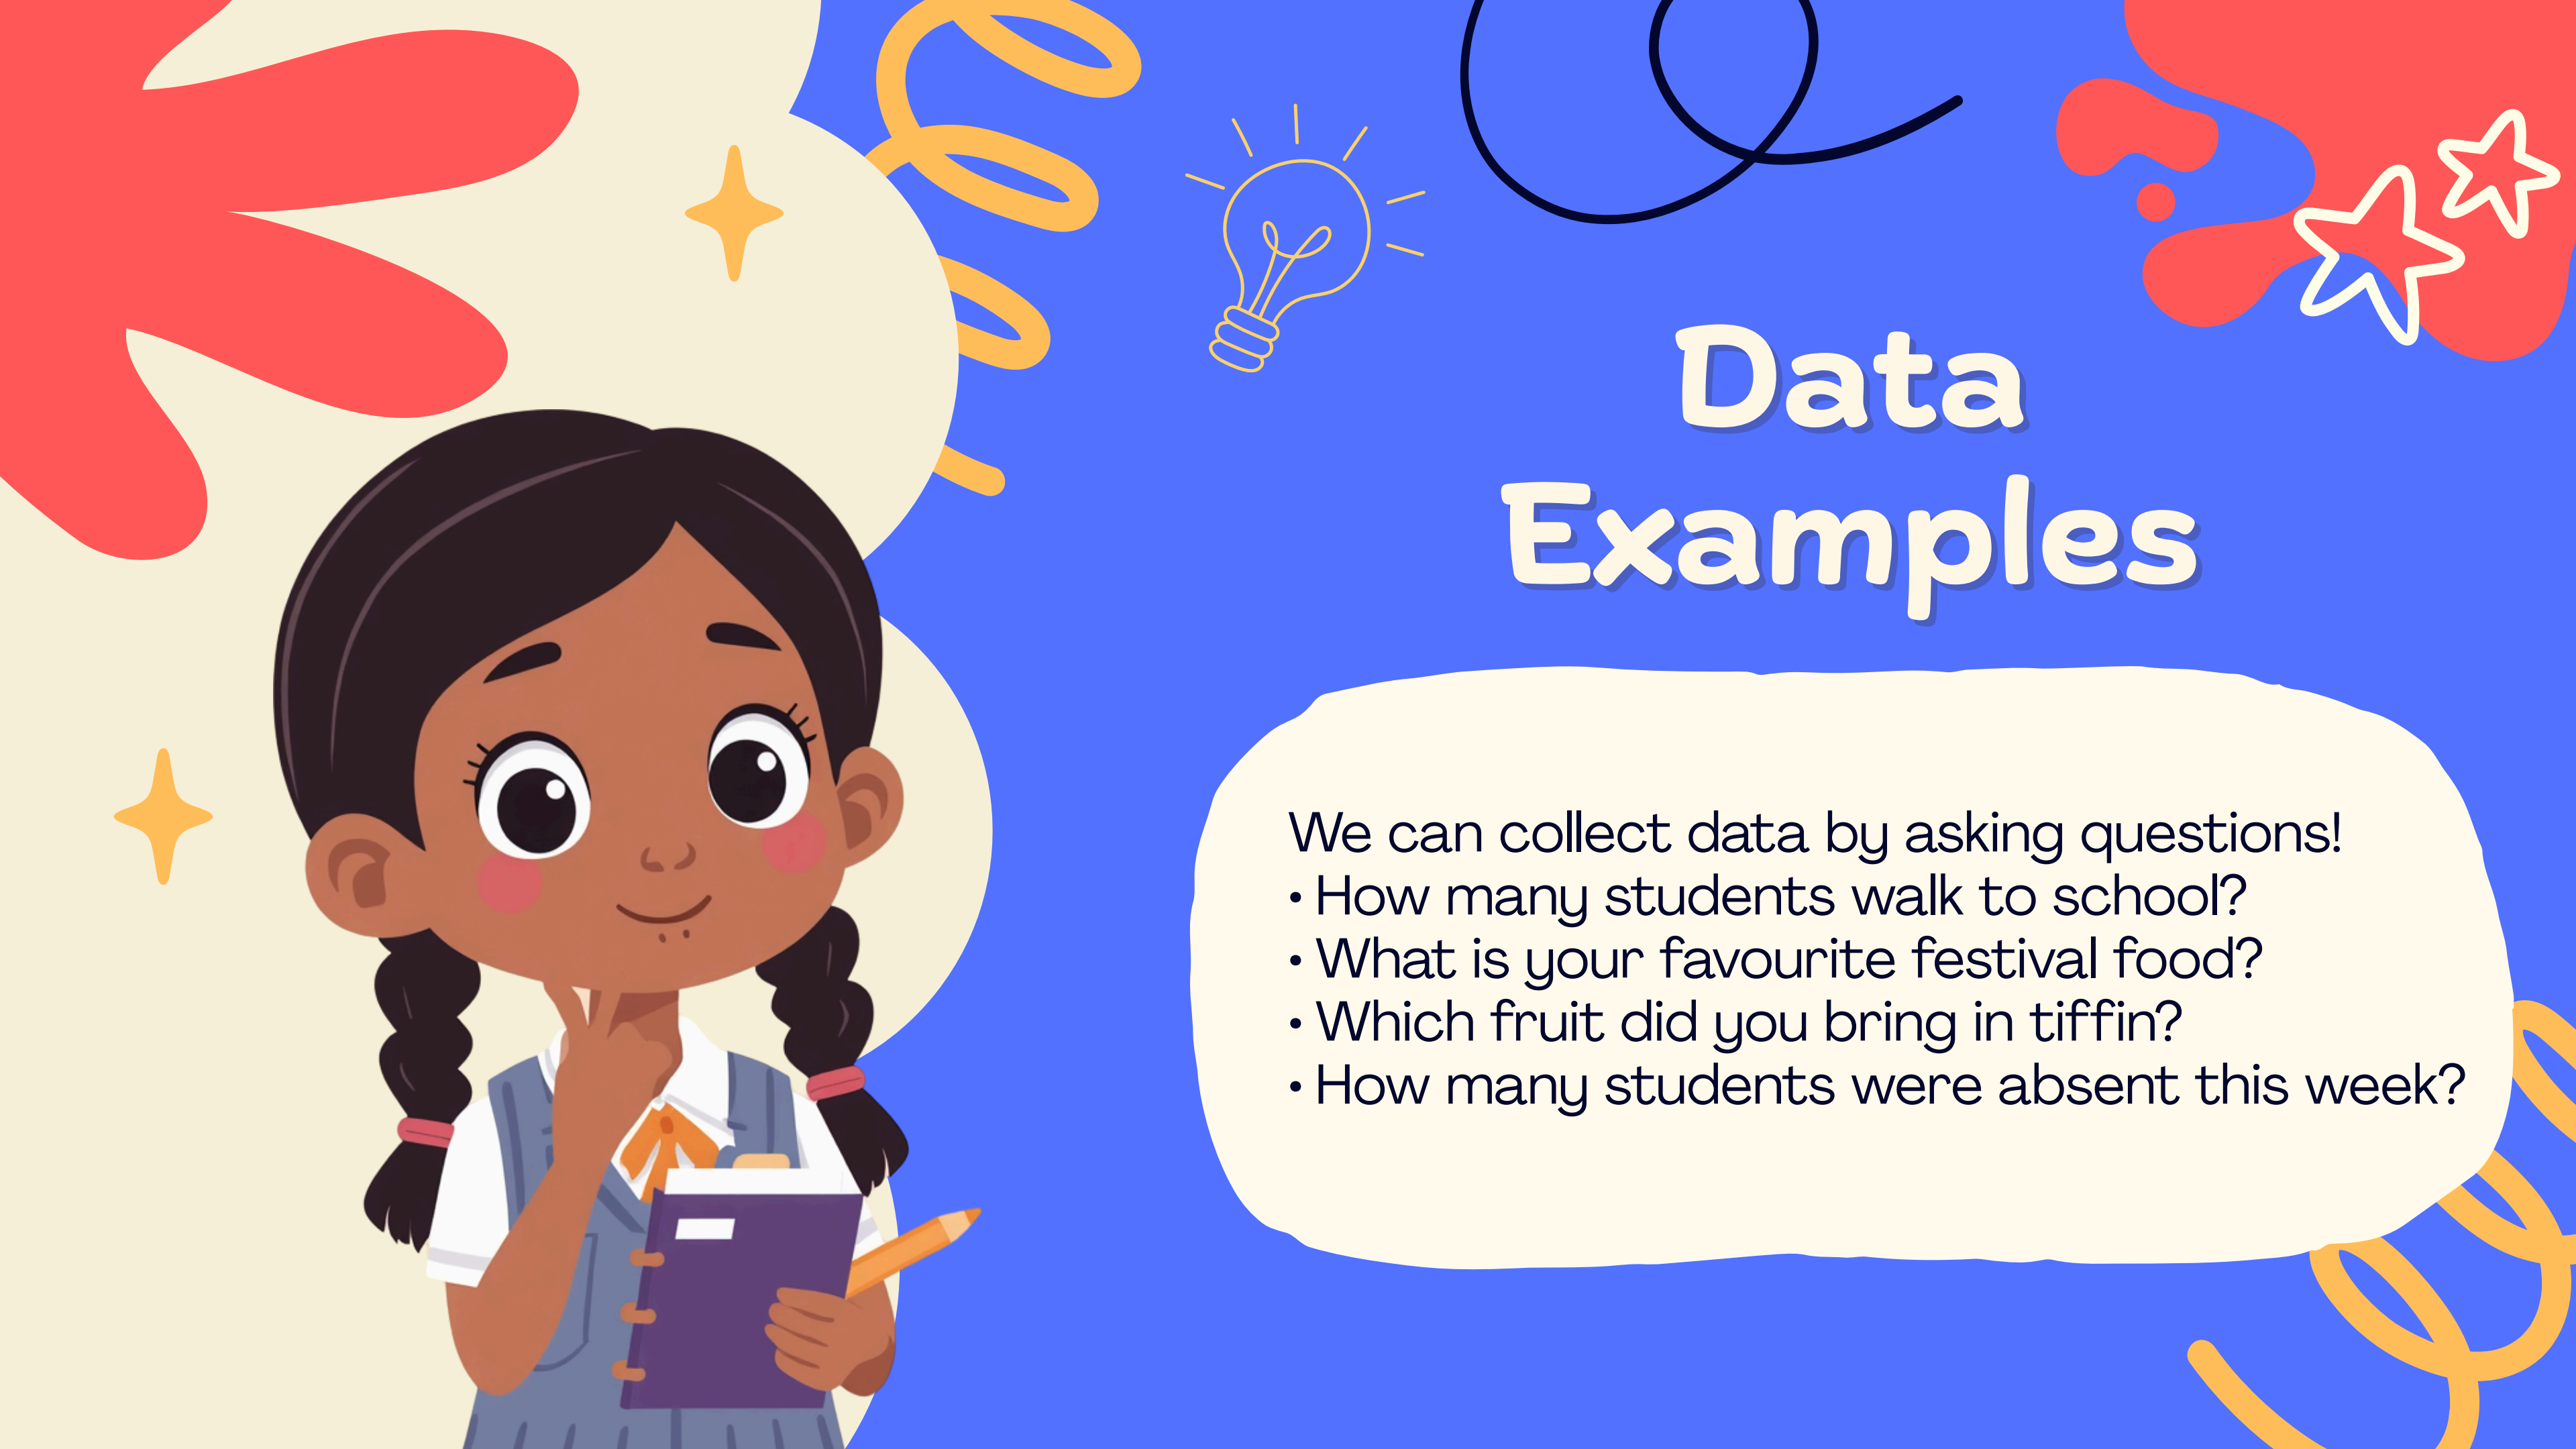

Teacher marking attendance in register

Shopkeeper counting vegetables at sabzi mandi

Child counting rotis made for dinner

Data is all around us!

Data Examples

- We can collect data by asking questions!
- How many students walk to school?
 - What is your favourite festival food?
 - Which fruit did you bring in tiffin?
 - How many students were absent this week?

Organizing Data

We can sort data into CATEGORIES!

Languages: Hindi, Tamil, Telugu, Marathi, Bengali

Diwali Sweets: Ladoo, Barfi, Chakli, Jalebi

Transport to School: Auto-rickshaw, Bus, Walking,
Car, Cycle

Animals: Cow, Goat, Buffalo, Hen, Dog

What is a Pictograph?

A PICTOGRAPH uses pictures to show data! Instead of writing numbers, we draw pictures. Each picture stands for a certain number of things.

Key Parts: TITLE, CATEGORIES, PICTURES, KEY

Building a Pictograph Step-by-Step

Step 1: Add TITLE

(What is your pictograph about?)

Step 2: Add CATEGORIES

(Groups we are comparing)

Step 3: Add PICTURES

(Each picture = one unit)

Step 4: Add KEY

(Tells what one picture means)

Example 1: Favourite Fruits

Favourite Fruits of Class 2A

Mango = 5 students

Banana = 3 students

Apple = 4 students

Guava = 2 students

Key: Each picture = 1 student

Q1: Which fruit is liked the most?

→ Mango (5 students)

Q2: Which fruit is liked the least?

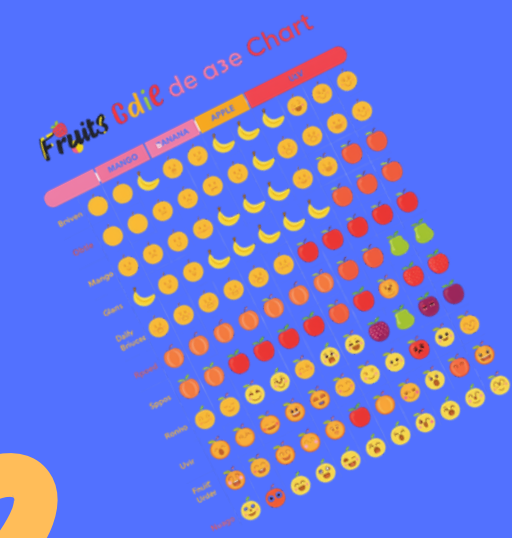

→ Guava (2 students)

Q3: How many students like Apple?

→ 4 students

Q4: How many MORE students like
Mango than Guava?

→ 3 more students

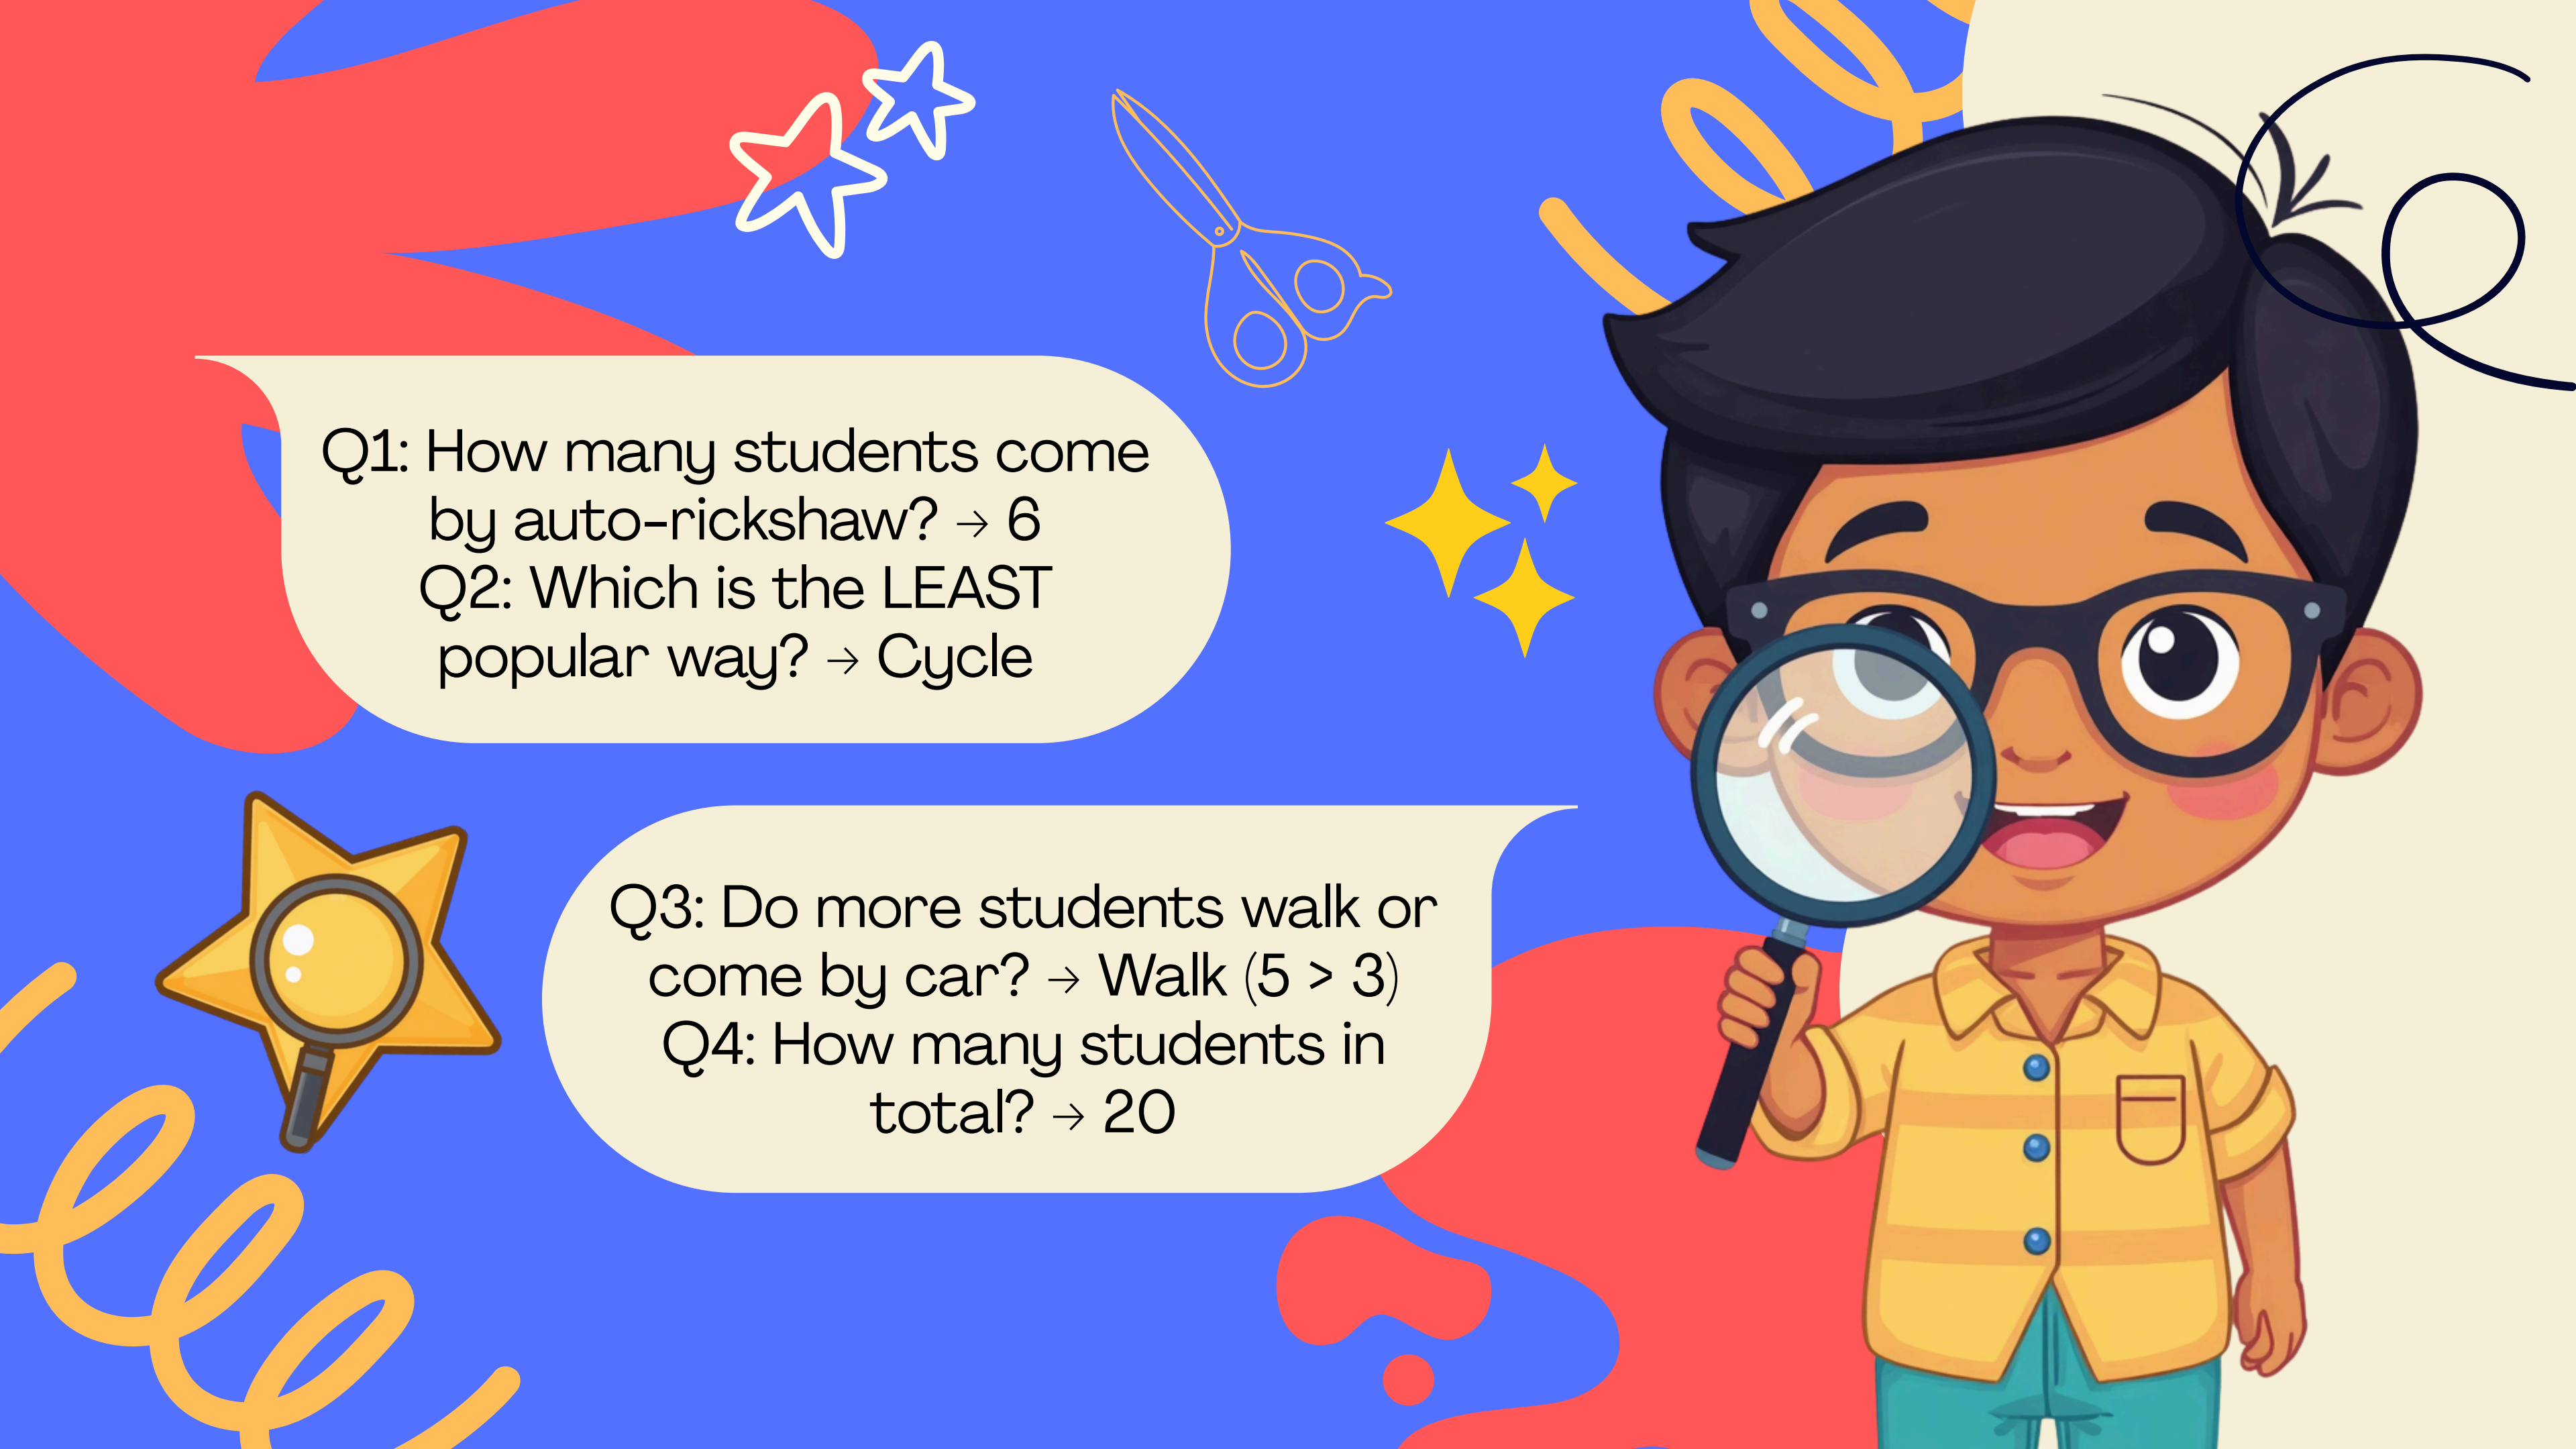

Example 2: How We Come to School

Auto-rickshaw: (6 students)
School Bus: (4 students)
Walking: (5 students)
Car: (3 students)
Cycle: (2 students)
Key: Each picture = 1 student

Q1: How many students come
by auto-rickshaw? → 6
Q2: Which is the LEAST
popular way? → Cycle

Q3: Do more students walk or
come by car? → Walk ($5 > 3$)
Q4: How many students in
total? → 20

Example 3: Diwali Sweets

Favourite Diwali Sweets of Class 2C:

Ladoo: ●●●●●●● (7 students)

Barfi: ■■■■■ (5 students)

Jalebi: ~~~~ (4 students)

Crunchy spiral snacki: @@@ (3 students)

Key: Each picture = 1 student

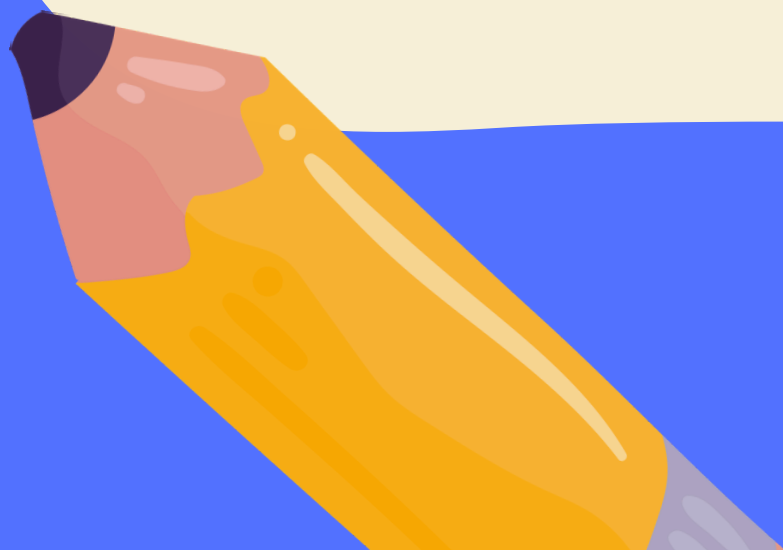

Did You Know?

PICTOGRAPH = PICTO (picture) + GRAPH (chart)
So a pictograph is literally a PICTURE CHART!

Memory Tip – Check 3 Things:

- TITLE — What is it about?
- PICTURES — How many in each row?
- KEY — What does one picture mean?

India Connection: Election results and
weather forecasts use graphs!

Let's Make One!

Create your own pictograph!

Data: Favourite Diwali Sweets

- Ladoo → 5 students
- Barfi → 3 students
- Jalebi → 4 students
- Crunchy spiral snack → 2 students

Steps: Write TITLE, categories,
draw pictures, add KEY!

Q1: Which sweet is the most popular?
Answer: Ladoo (5 students)

Q2: Which sweet has the least votes?
Answer: Crunchy spiral snack (2 students)

What We Learned Today

DATA is information we collect

A PICTOGRAPH uses pictures to show data

A pictograph has 4 parts: TITLE, CATEGORIES, PICTURES, KEY

We can READ a pictograph to answer questions

We can MAKE a pictograph using our own data

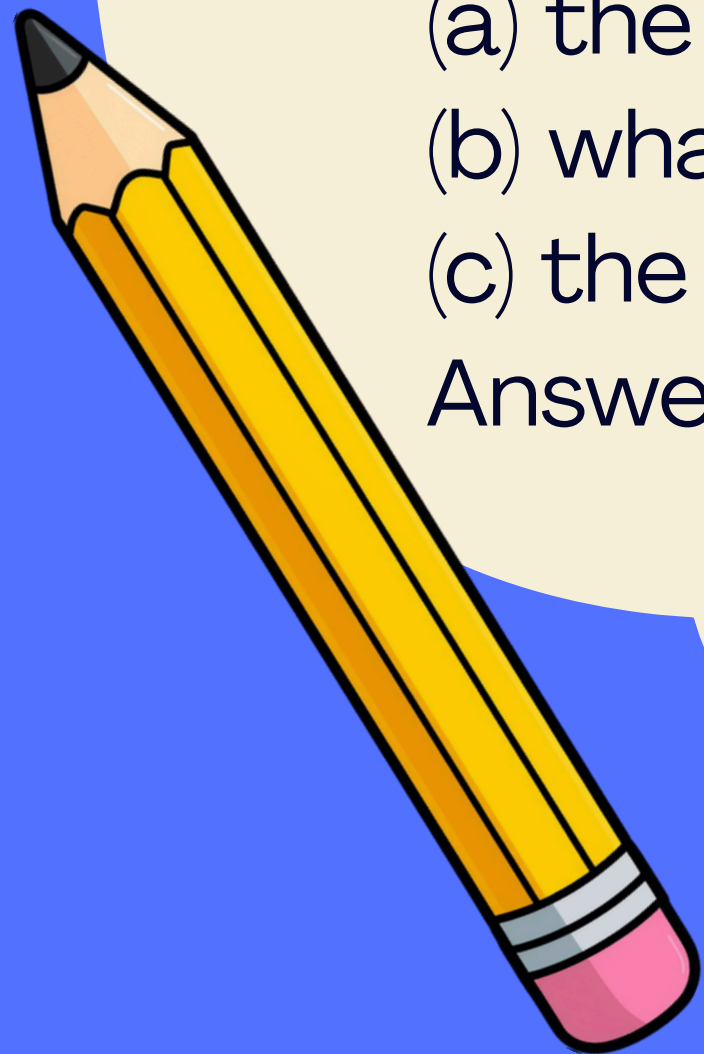

Exit Ticket

Q1: Look at this mini pictograph –
Which category has the most?

Q2: In a pictograph, the KEY tells us:

- (a) the title
- (b) what one picture means ✓
- (c) the categories

Answer: (b) what one picture means!

Great work today, Class!

**YOU'RE A DATA
STAR!**
