

**LET'S BUILD A MAP
QUIZ**

WITH JAVASCRIPT!

SEE THE MAGIC! OUR FINISHED QUIZ

Interactive Map Quiz Demo

Click Any State to Play!

Click a state to answer the quiz — just like KBC! Are you ready to create this magic?

WHAT IS JAVASCRIPT?

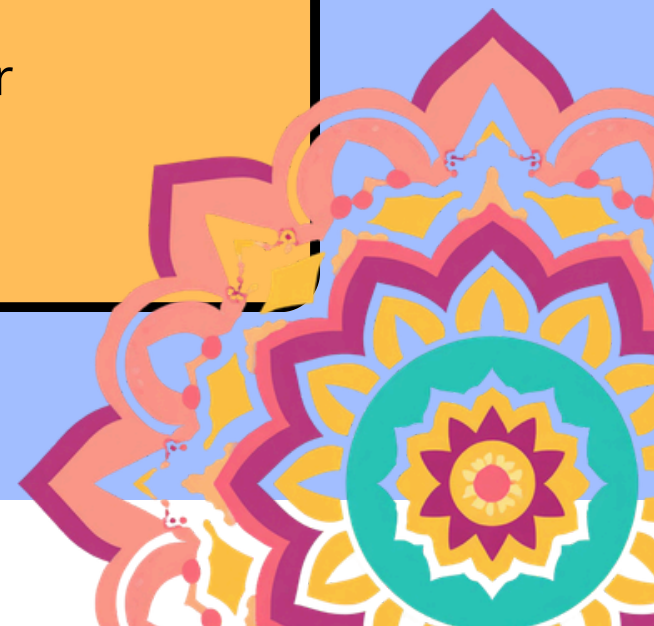

The Magic Behind Interactive Webpages!

HTML is the shape. CSS adds colors. JavaScript is the Diya that lights it up! Think of it like making a beautiful Rangoli.

JS Makes Webpages Come Alive!

JavaScript responds to YOU — when you click, type, or move your mouse, JS makes the magic happen on the screen!

OUR THREE BUILDING BLOCKS

Variables (Dabba)

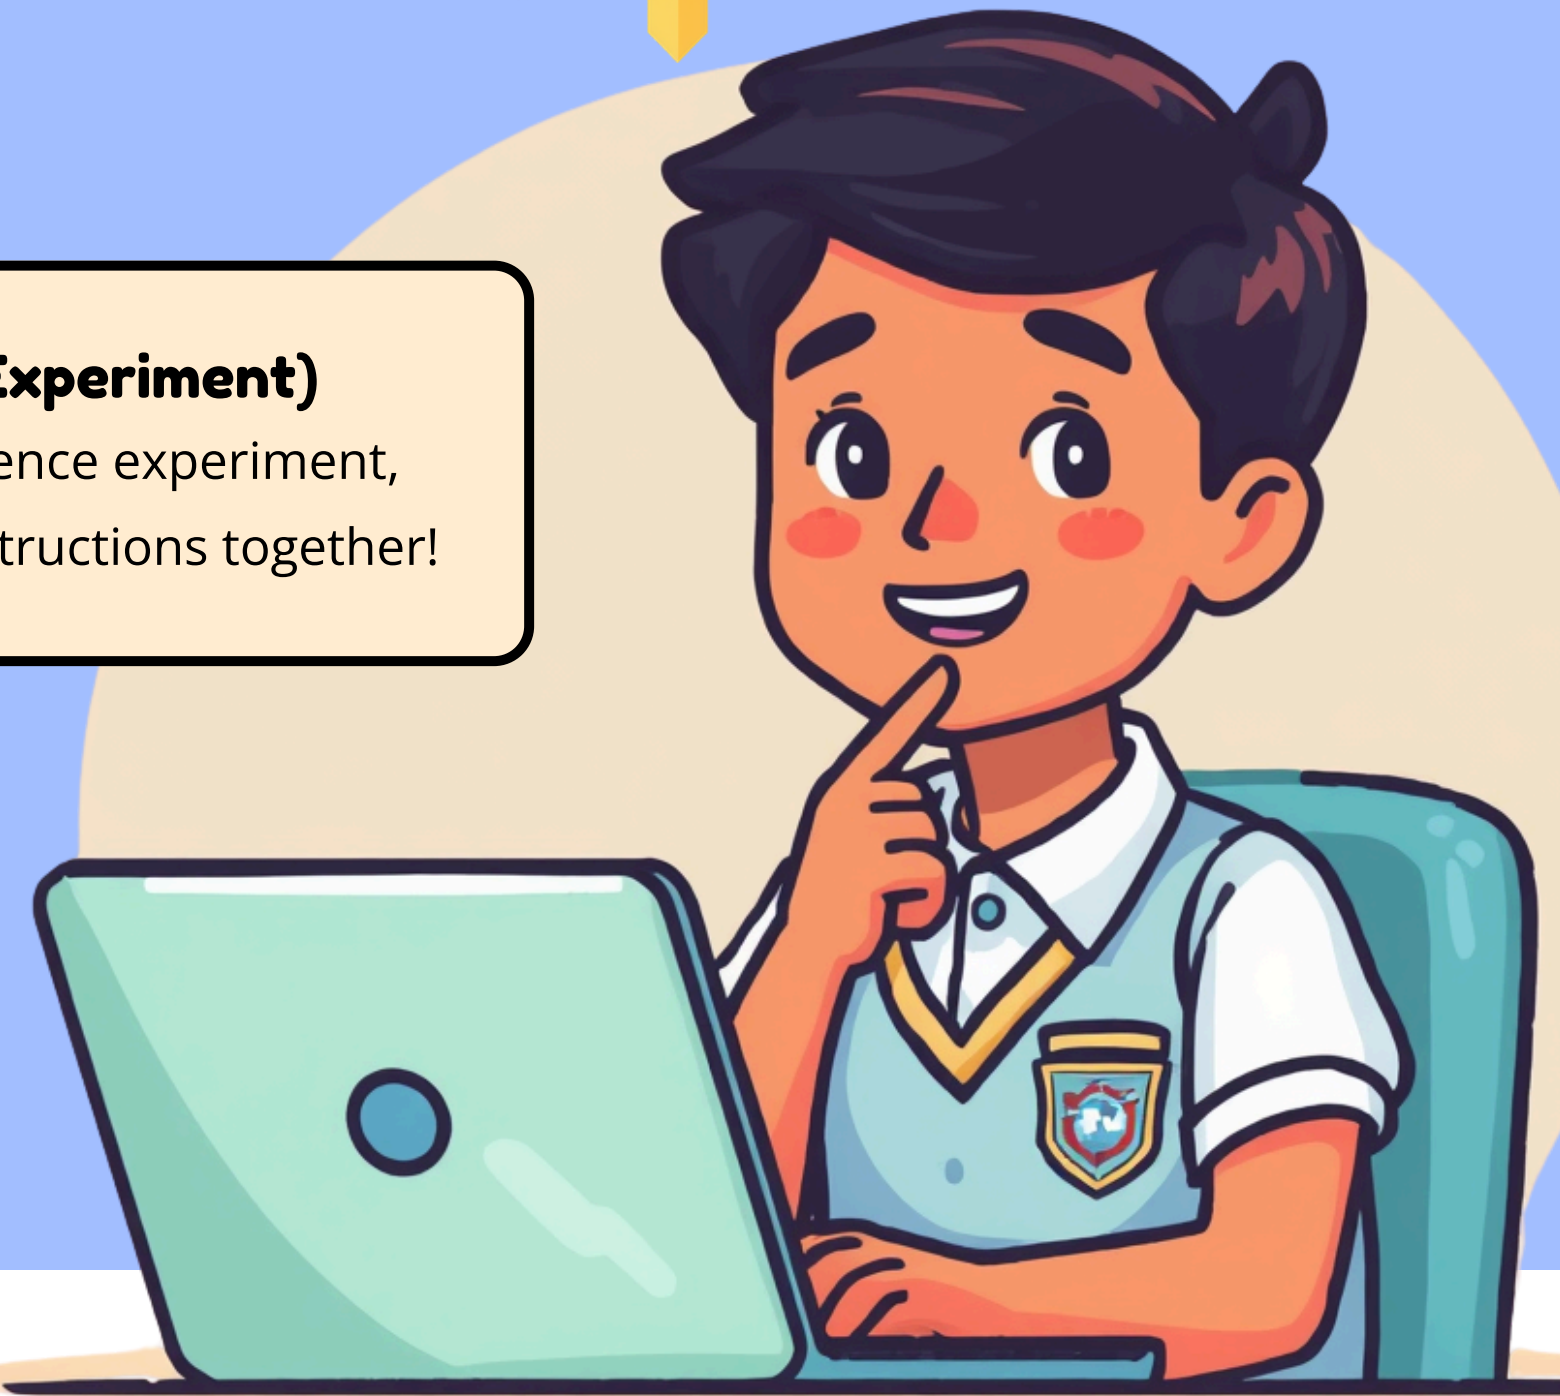

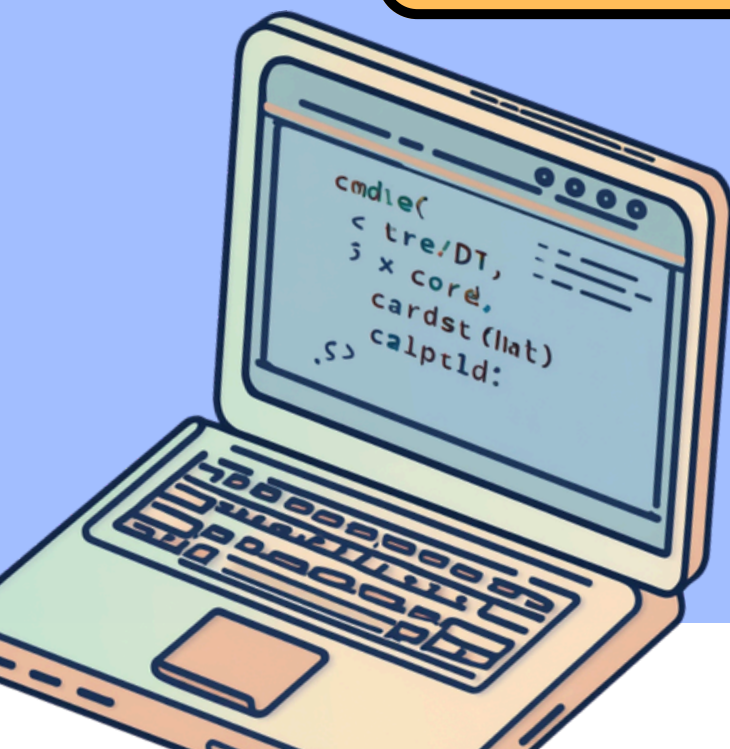

Like a tiffin box that stores your food, variables store values in code!

Functions (Experiment)

Like steps in a science experiment, functions group instructions together!

If-Else (Umpire)

Like a cricket umpire deciding out or not out, if-else makes decisions!

VARIABLES – THE DABBA FOR DATA

What is a Variable?

Variables store information like your dabba holds food! Just like you label your tiffin box, we label our variables with names.

Code Example

```
let myAnswer = 'Rajasthan';
```

This creates a variable named myAnswer and stores the word Rajasthan inside it!

FUNCTIONS – SCHOOL EXPERIMENT STEPS

What Are Functions?

Functions group steps we want to do again and again. Just like following a science experiment, we write the steps once and use them whenever needed!

Code Example

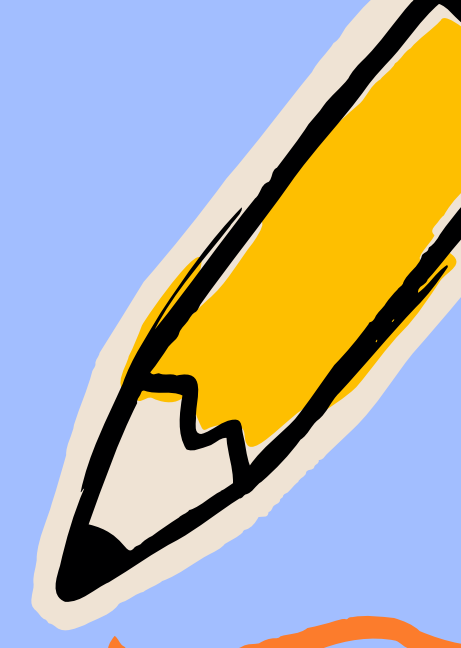

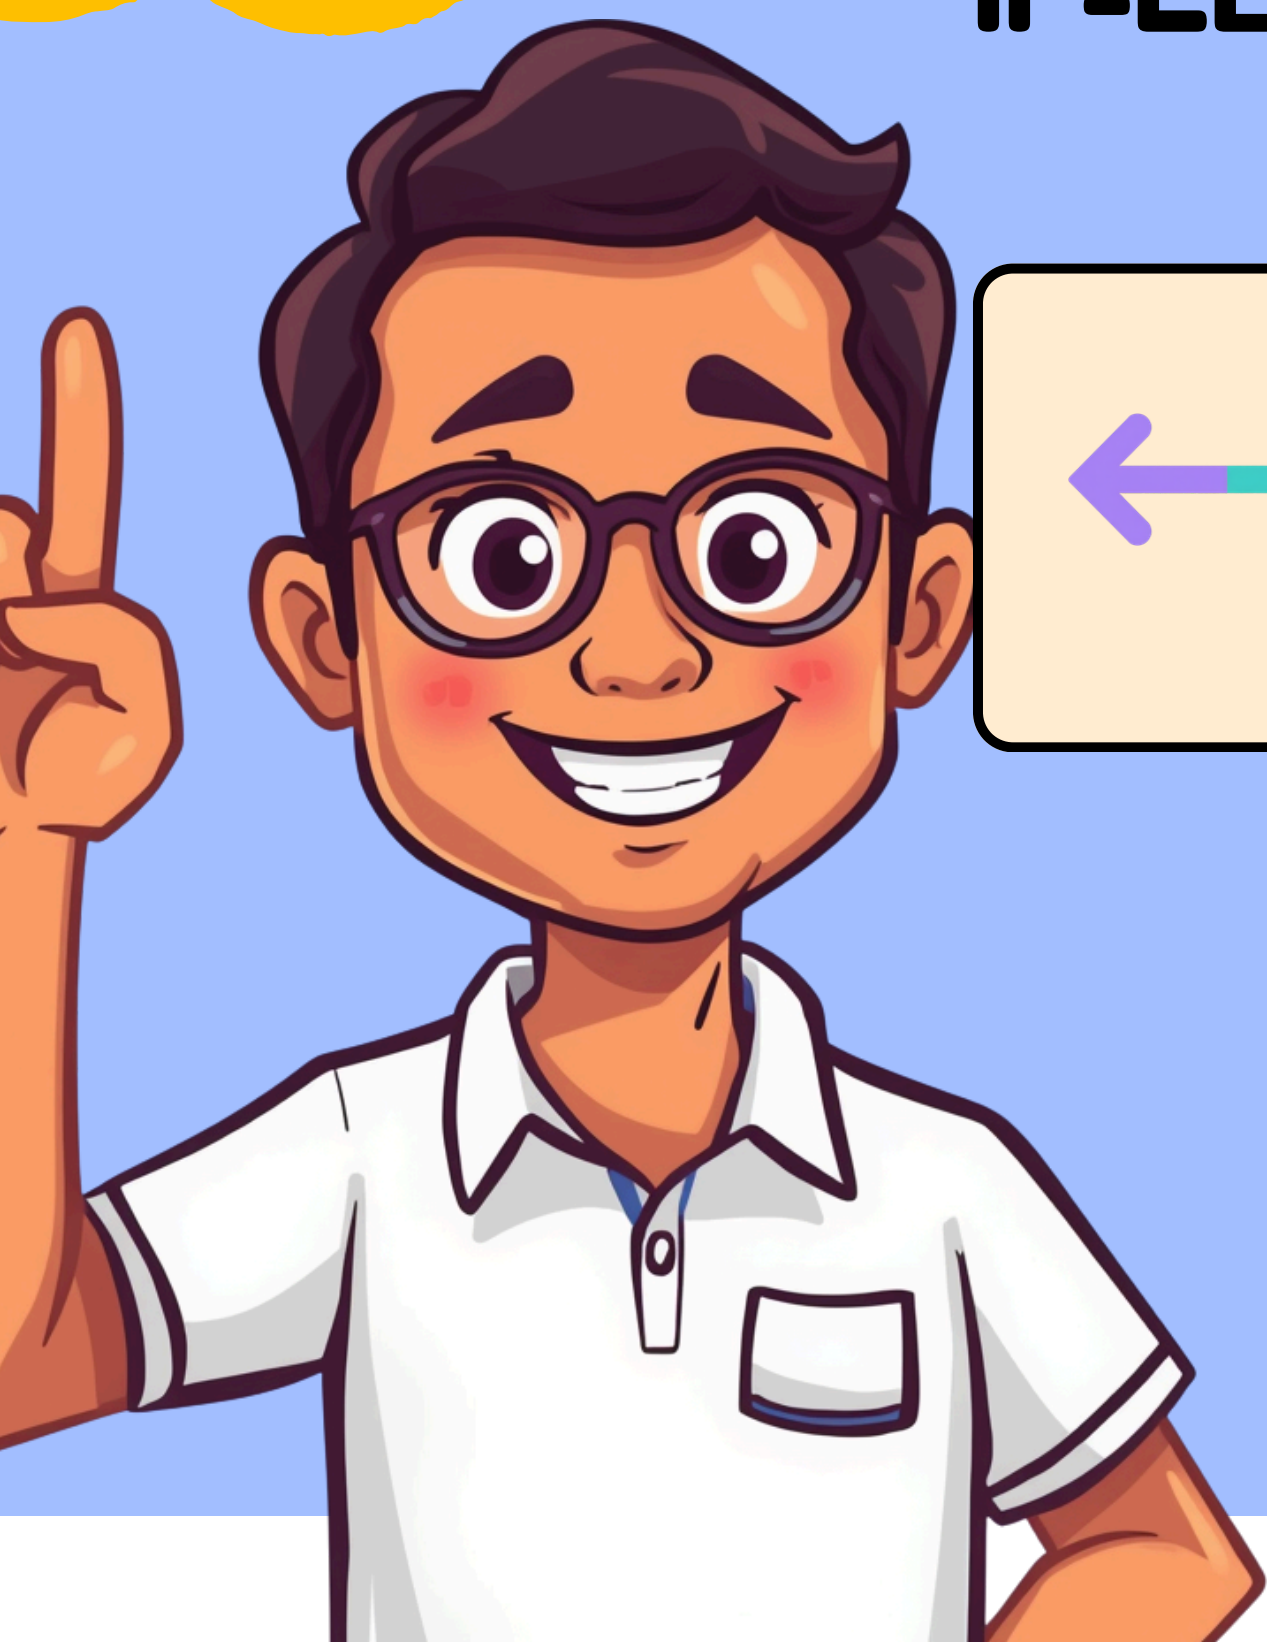

```
function checkAnswer() {  
  /* steps go here */  
}
```

This function bundles our quiz-checking steps together!

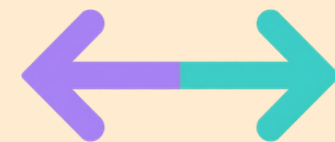

1

2

3

IF-ELSE – CRICKET UMPIRE DECISIONS

Making Decisions Like an Umpire!

```
if (answer === correct) { showWin(); } else { tryAgain(); }
```

Just like an umpire decides OUT or NOT OUT!

Code Example: The Decision Maker

If-Else helps us choose what to do next. When something is true, do one thing. When it's false, do something else!

CLICK EVENTS – THE DOORBELL RINGS!

When You Click, JS Listens!

When you click a button on a webpage, it's like pressing a doorbell. JavaScript is always listening, waiting to respond to your actions!

Just Like Ringing a Doorbell

Every click, tap, or keypress is an 'event'. JS hears it and runs your code — that's how our map quiz will know when you pick a state!

TIME TO BUILD: OUR MAP QUIZ!

Click on States to Test Your Knowledge

Interactive Map Coming to Life!

Let's add code step-by-step to create our quiz. Watch how variables, functions, and if-else work together!

LIVE CODE REVEAL: MAP QUIZ CORE

Variable (Dabba)

```
let correctState = 'Rajasthan';
```

If-Else (Umpire)

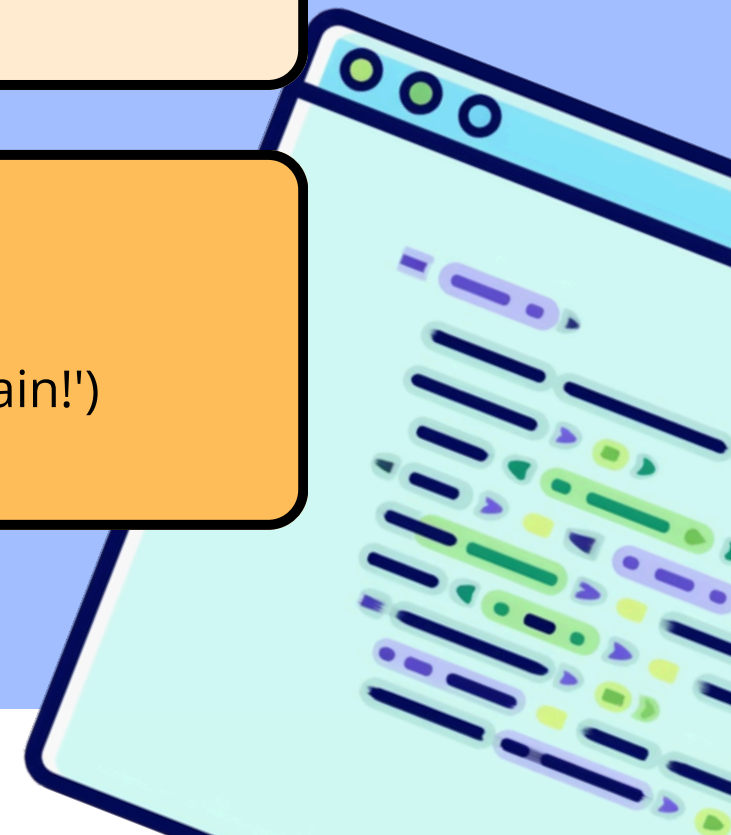

```
if (clicked === correctState)
```

Function (Steps)

```
function checkAnswer(clicked) { }
```

Alert (Response)

```
alert('You win!') or alert('Try again!')
```

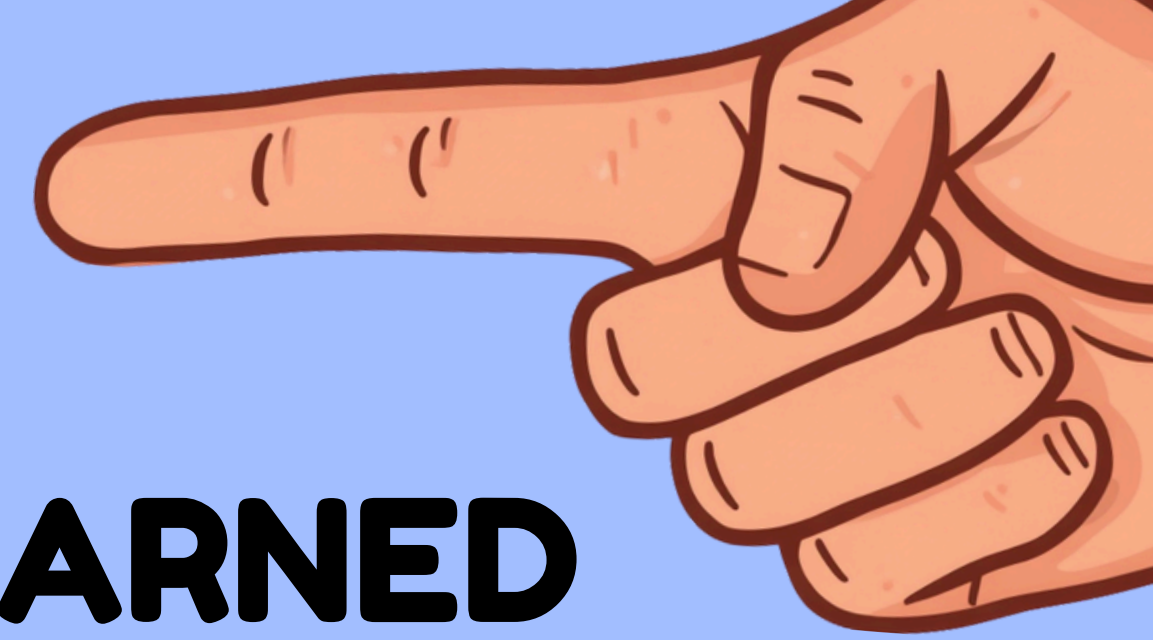

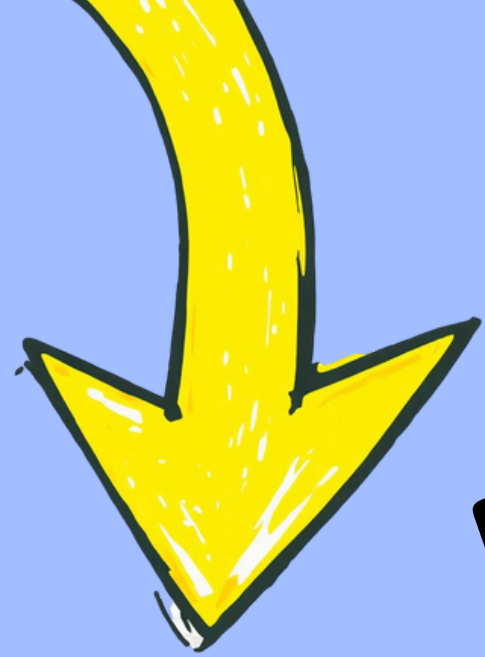

YOUR TURN! MODIFY THE QUIZ

What state will you pick?

Can you change the alert message?

Change ONE thing in the code. Try a new correctState or message!
What will you create?

WRAP-UP & WHAT WE LEARNED

**JavaScript lights up webpages
(Diya analogy)**

Variables store info (Dabba)

**Functions group steps
(Experiment)**

**If-Else decides (Cricket
umpire)**

**Great job today! You built
your first interactive quiz.**

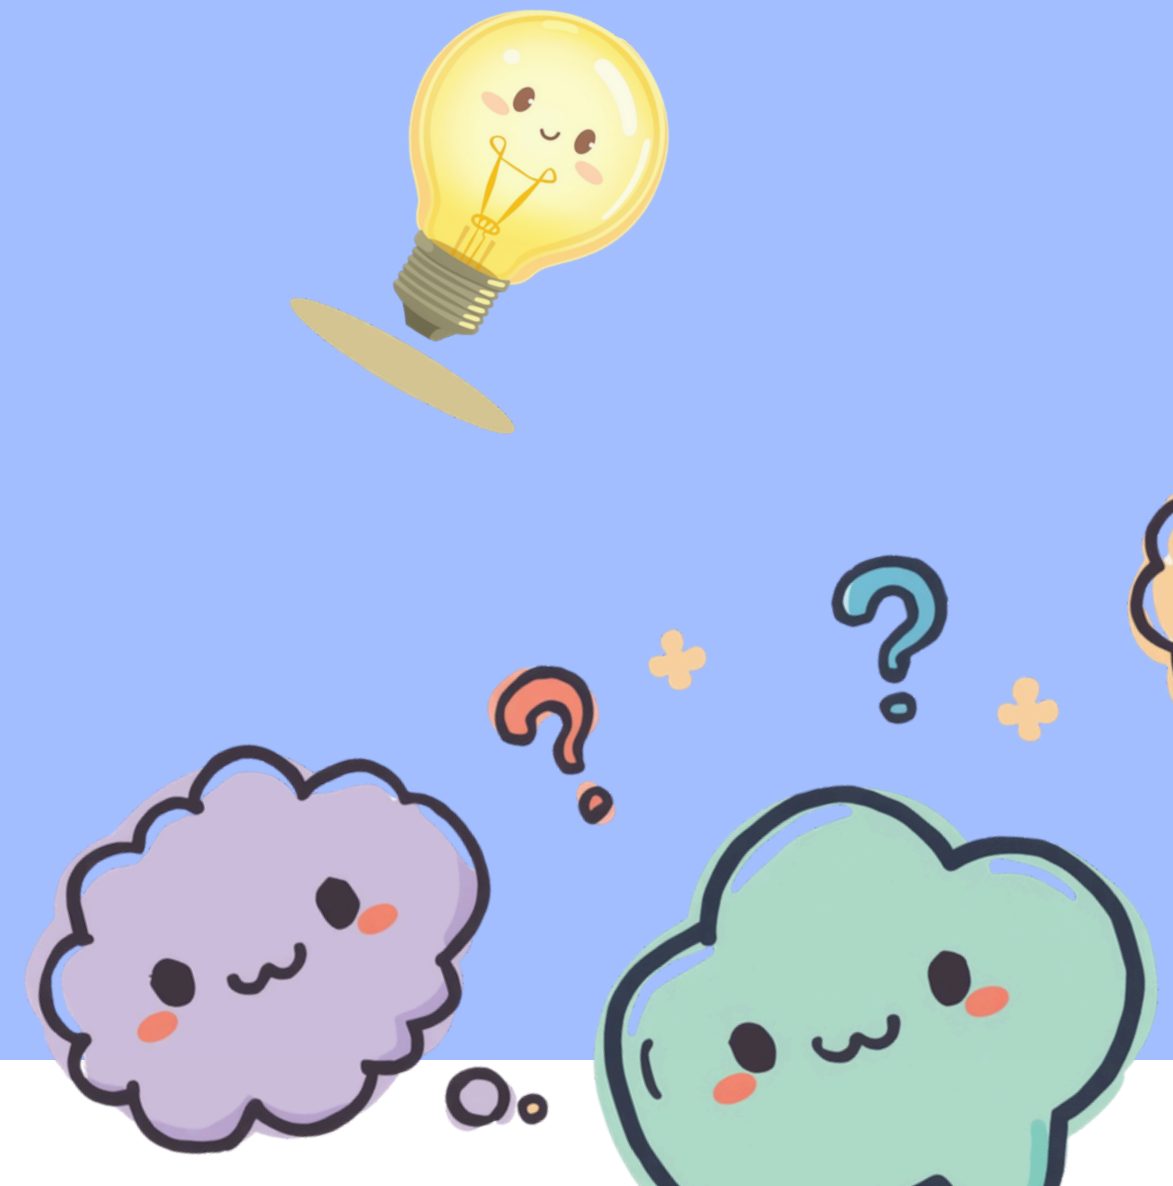

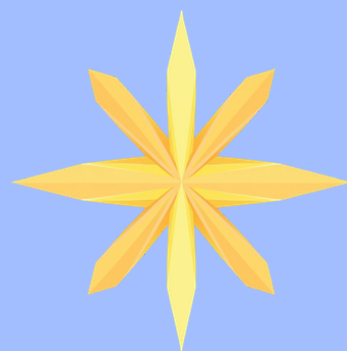

EXIT TICKET: WHAT IS AN INTERACTIVE WEBPAGE?

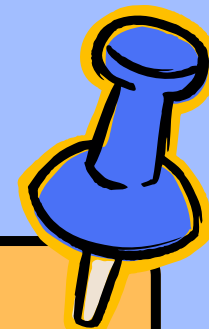

**In your words, what does 'interactive
webpage' mean?**

Think about everything we learned
today. Share your thoughts with the
class or write them down!

THANK YOU & KEEP CREATING!

SEE YOU NEXT SESSION!
