

ETHICAL HACKING

The Digital Watchman

Protecting the **Digital House**

Planrs Academy | Grade 6 Session 1

THE VANISHING ACCOUNT

A Digital Mystery

Imagine waking up and finding your favorite game or social media account is gone! No matter how many times you try to log in, it says "Incorrect Password."

This happened to a student who used "**123456**" as their password. A sneaky hacker guessed it in seconds! This is why being **Chaukas** (Alert) is our first line of defense.

The Big Question: If there are people out there trying to steal data, who is there to stop them? We need heroes who think like hackers but act like protectors.

MEET THE THREE HATS

Who is Who in Hacking?

In the world of cybersecurity, we categorize hackers by the "Hats" they wear. This tells us about their intent—why they are hacking.

Black Hat The Digital Thief: Breaks into systems to steal or cause harm. Never be this!	Grey Hat The Explorer: Finds weaknesses but might not always follow all the rules.	White Hat The Ethical Hacker: Uses their skills to protect. A true Digital Watchman!
---	--	--

THE ETHICAL LOCKSMITH

Hacking for Good

To understand a White Hat hacker, think of a professional **Locksmith** in your neighborhood.

- **The Thief:** Breaks your door lock at night to steal your TV. (Black Hat)
- **The Locksmith:** You hire them to come to your house and see if your locks are strong enough. They might "break" the lock, but only to show you how to fix it! (White Hat)

Just like a locksmith, an ethical hacker tests systems to find **Vulnerabilities** before the bad guys do.

SPOTTING THE WEAKNESS

What is a Vulnerability?

A **Vulnerability** is a "Kamzori" (weakness) in a digital system. It's like a flaw in a shield or a crack in a wall.

The Open Window Analogy:

Imagine a big bungalow with a high-tech laser security gate and a massive wall. It looks perfectly safe! But... someone left a small bathroom window open in the back.

That open window is a **Vulnerability**. An ethical hacker's job is to find that window and tell the owner to lock it!

THE RULE OF PERMISSION

The "Ijazat" Rule

What is the biggest difference between a hero and a villain? **Permission (Ijazat)**.

The Cricket Stadium Example:

If you jump over the wall of a cricket stadium at night just to explore, you are **Trespassing** (Illegal).

But if the stadium manager hires you as a security expert to see if the walls are too easy to climb, you are a **Hero**! You have a badge and a job to keep everyone safe.

Rule #1 of Ethical Hacking: Never test a system unless you have written permission first!

THE ETHICAL HACKER'S CODE

Rules to Live By

To be a Digital Watchman, you must follow a strict set of rules. This is your "Code of Honor":

1. **Get Permission:** Always have a clear agreement before you start.
2. **Respect Privacy:** If you see personal data while testing, don't look at it or share it.
3. **Report Everything:** Tell the owner exactly what you found so they can fix it.
4. **Stay Legal:** Never use your skills to hurt someone or break the law.

Staying Chaukas (Alert)

You don't need to be a pro hacker to stay safe. Most "hacks" happen because people forget **Digital Hygiene**.

Basic Safety Checklist:

- **Strong Passwords:** Don't use "123456" or your name. Use a mix of symbols and numbers!
- **Safe Clicking:** Never click on weird links in SMS or Emails (Phishing).
- **Updates:** When your phone asks to "Update," do it! Updates often fix those "open windows" (vulnerabilities).

THE DIGITAL WATCHMAN

Protecting the Future

As we use more apps for school, banking, and talking to friends, the world needs more White Hat hackers. They protect our **Digital Homes** and keep our information private.

Success Criteria

Can you explain why a White Hat needs permission? Can you spot one "Vulnerability" in your own online habits? If yes, you are thinking like a Digital Watchman!

FINAL MISSION

Your Responsibility

Before you log off today, think about this:

*"If you found a way to see everyone's grades in the school computer, what would be the **Ethical** thing to do?"*

Remember: Hacking without permission is illegal. Use your curiosity to build and protect, never to destroy.
