

SCRATCH JR

My First Animated Jungle Story

Grade 1 Coding Adventures

Learn to code your own jungle cartoons!

WELCOME, YOUNG CODERS!

Want to Make Cartoons?

Today is a very special day because **you** are going to become an animator! Just like the cartoons you watch on TV, we are going to make characters move, jump, and dance using code. [cite: 2, 3]

What is Scratch Jr?

Scratch Jr is a magical language where you snap blocks together like Lego pieces to give instructions to your animal friends. These instructions are called **Code**!

Learning Goals for Today:

- Explore the **Stage** (your animation playground). [cite: 8]
- Meet the **Sprites** (your animal actors). [cite: 10]
- Learn the **Motion Blocks** (your coding superpowers). [cite: 32]

The Jungle Stage

This big screen is the **Stage**. This is where your story comes alive! Think of it as a theater where your characters will perform. [cite: 4, 6, 9]

Meet the Sprites!

In Scratch Jr, we call our characters **Sprites**. You can choose many Indian animals from the library, like the **Royal Bengal Tiger** or the **Indian Elephant**! [cite: 10, 11, 12, 46]

How to add a friend:

Click the plus button on the left to add a new character! [cite: 14]

Fun Fact: Coding sprites is just like making *Kathputli* puppets come to life with invisible strings! [cite: 13]

Set the Scene!

Every story needs a beautiful background. Let's place our Tiger in the middle of a lush **Forest**. [cite: 19, 22]

The Background Button

Look for the picture icon at the top! [cite: 21]

Step-by-Step:

1. Click the **Background Button** at the top of the stage. [cite: 21]
2. Scroll through the library until you find the **Forest** or Jungle. [cite: 18, 19]
3. Tap the checkmark to set your scene!

Pro Tip: You can even use the "Paint" tool to add your own flowers or trees to the jungle! [cite: 15]

Coding Basics

To make the Tiger move, we use **Blocks**. Each color does something different. [cite: 23]

Yellow Blocks: These are "Start" blocks. They tell the code when to begin. [cite: 34]

Blue Blocks: These are "Motion" blocks. They move your friends! [cite: 28, 32]

The Magic Formula:

Snap the blocks together like a puzzle. If they are snapped together, the Tiger will follow the instructions in order! [cite: 36]

Code = Instructions! Just like a recipe for a cake or instructions for a game. [cite: 47]

Let's Code: The Pouncing Tiger

Follow these steps to make your Tiger walk and jump across the jungle. [cite: 33, 37]

- 1 Drag the **Yellow Start Block** (with the Green Flag) to the coding area. [cite: 34, 47]
- 2 Snap the **Blue Move Right Block** next to it. [cite: 35]
- 3 Change the number "1" to "**5**" to make the Tiger walk further! [cite: 30, 35]
- 4 Snap the **Jump Block** at the end. [cite: 40, 45]

Run Your Code!

Click the **Green Flag** at the top of the screen. [cite: 41]

"Arre waah!" Watch your Tiger move 5 steps and then leap into the air! [cite: 42]

JUNGLE CHALLENGE!

Can you add more friends?

Now that Tiger is moving, can you code the **Clever Monkey** to jump too? [cite: 46]

Checklist for Success:

- Did you pick a Jungle background? [cite: 19]
- Is your Start block yellow? [cite: 34]
- Are your Motion blocks blue? [cite: 32]
- Did you snap them together tightly? [cite: 36]

You created your very first animation. You are officially a Junior Coder!
