

Scratch — Meet the Stage

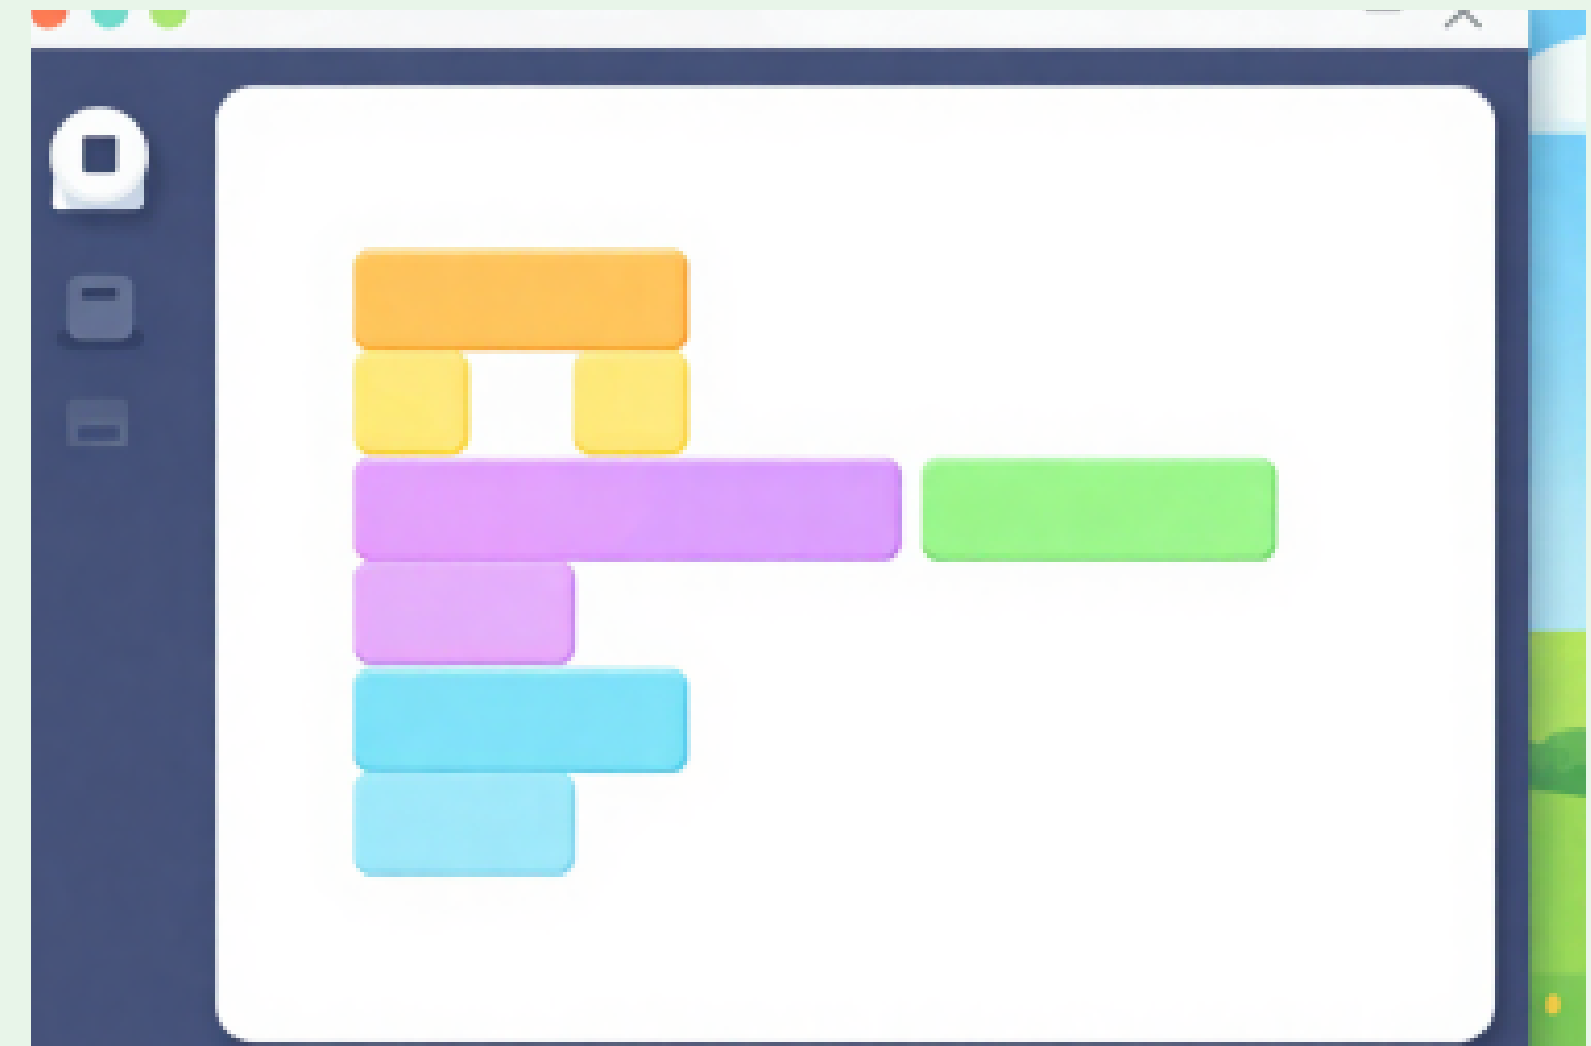

Grade 2 | Coding | Let's Explore!

What is Scratch?

Scratch is a free coding tool made just for kids!

You can make stories, games, and animations
by snapping colourful blocks together.

Let's Open Scratch!

Step 1: Open your browser

Step 2: Go to scratch.mit.edu

Step 3: Click 'Create'

Step 4: You're ready to code!

Meet the Stage!

The Stage is the white area where your sprites act, dance, and play!

It's like a TV screen for your code.

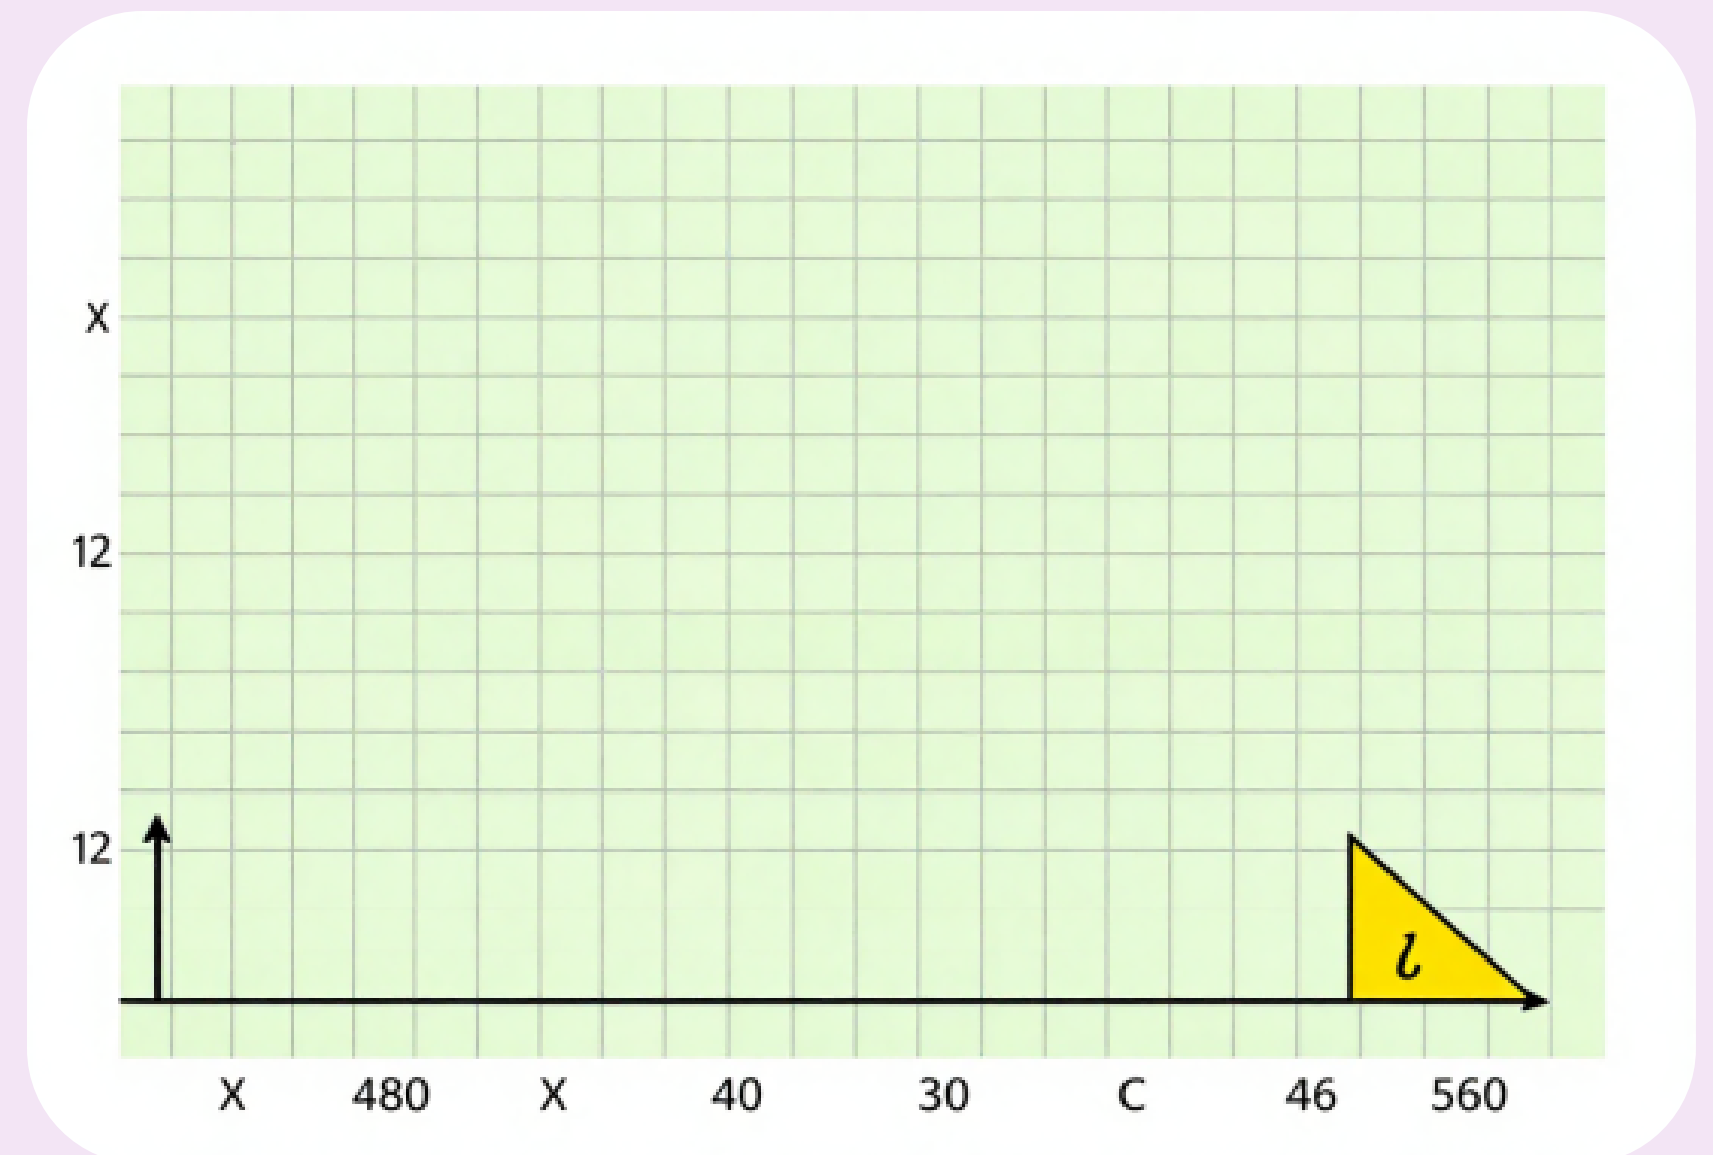

What is the Stage?

The Stage is 480 steps wide and 360 steps tall.

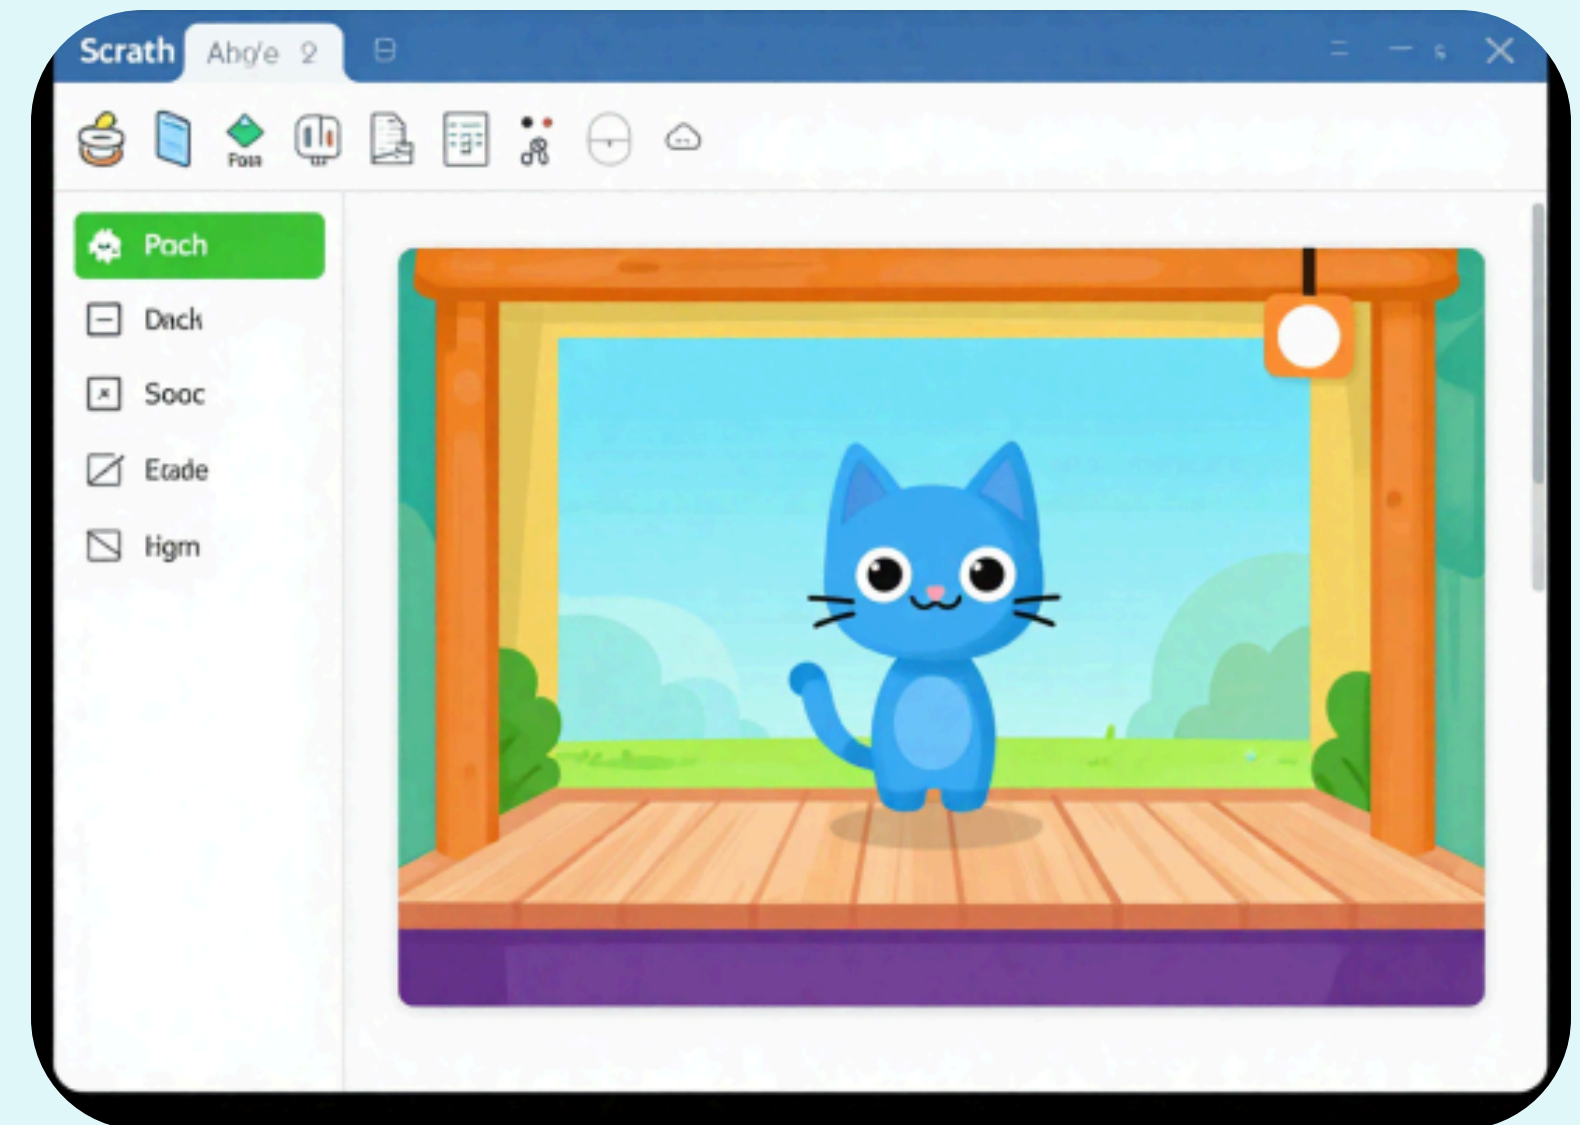

It is where everything you create appears!

Sprites move, talk, and dance here.

The Stage is Like a...

- 🎬 A movie screen – sprites are the actors!
- 🎨 A canvas – you paint with code!
- 🏟️ A playground – sprites run and jump here!

Stage Coordinates

The stage uses X and Y to find positions.

X = left or right (like a number line)

Y = up or down (like a ladder)

X	2	3	5	0	4	7	8	X
				0				
								X

X and Y on the Stage

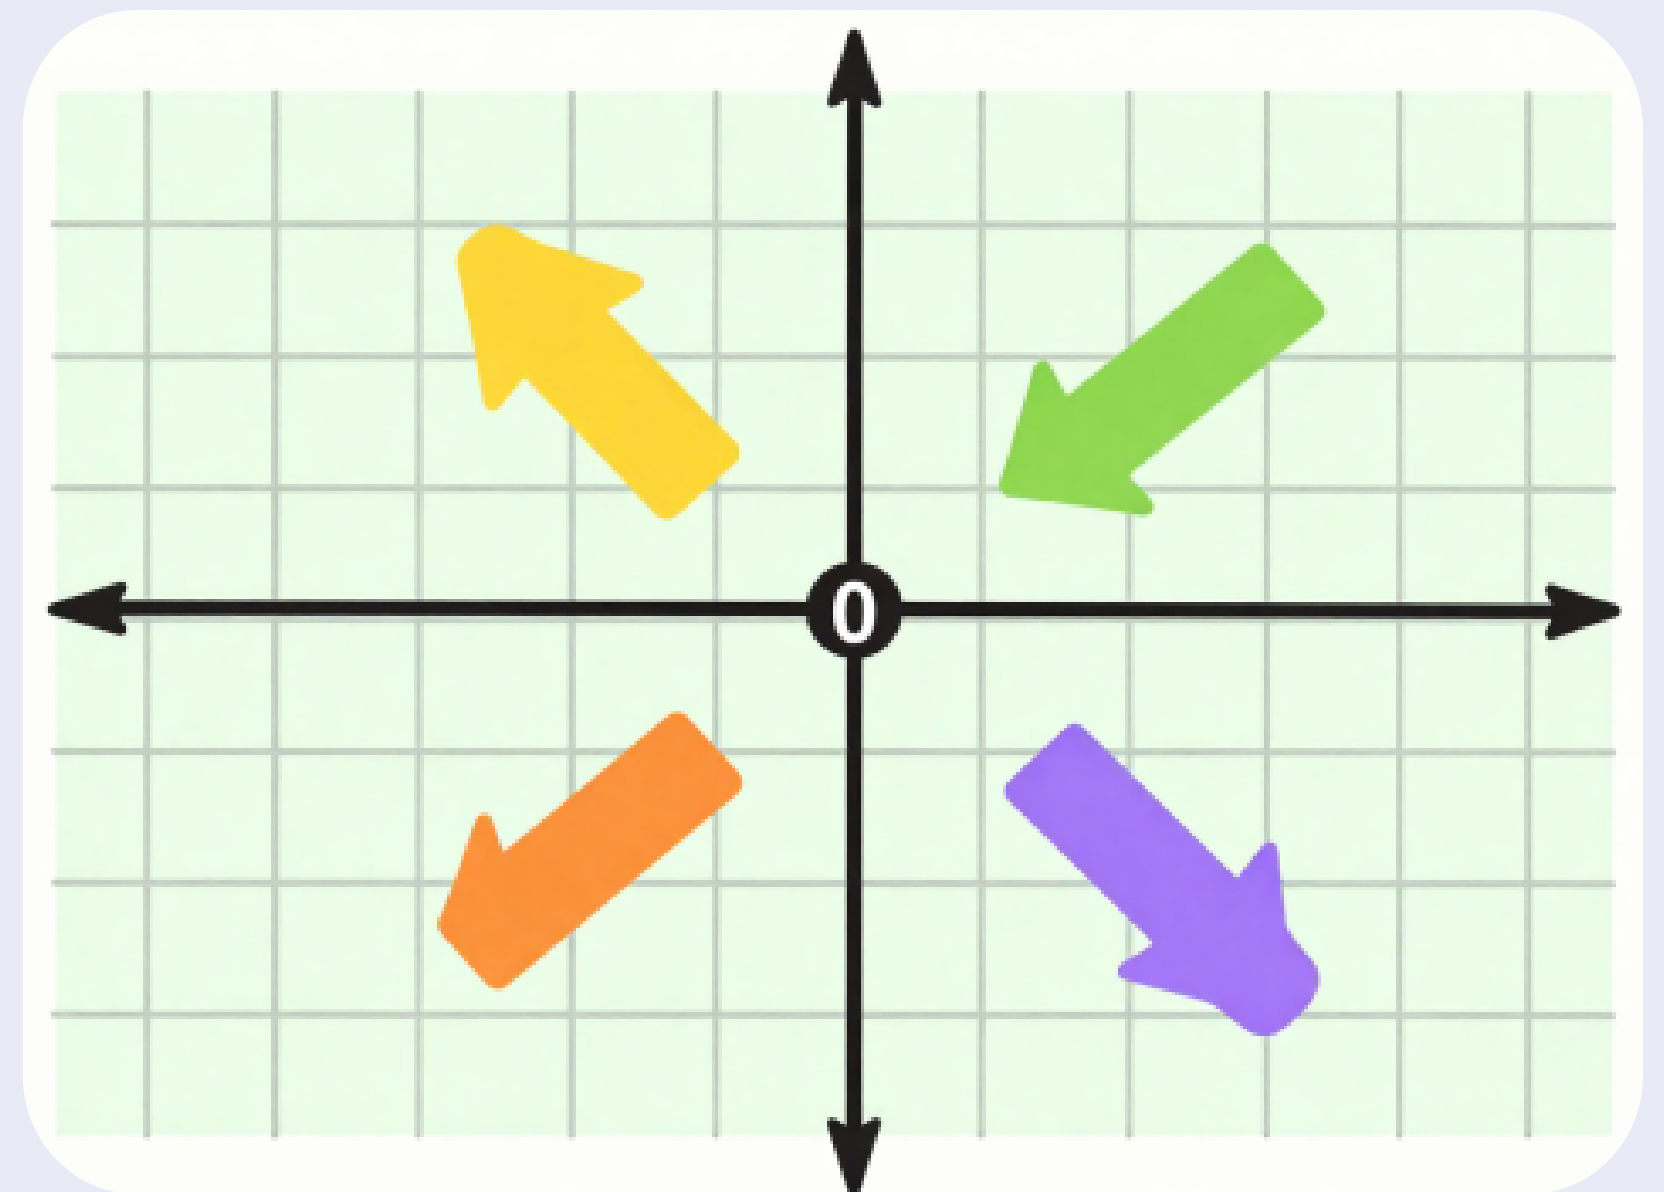

Centre of the stage = X: 0, Y: 0

Move right = X gets bigger (up to 240)

Move left = X gets smaller (down to -240)

Move up = Y gets bigger (up to 180)

Move down = Y gets smaller (down to -180)

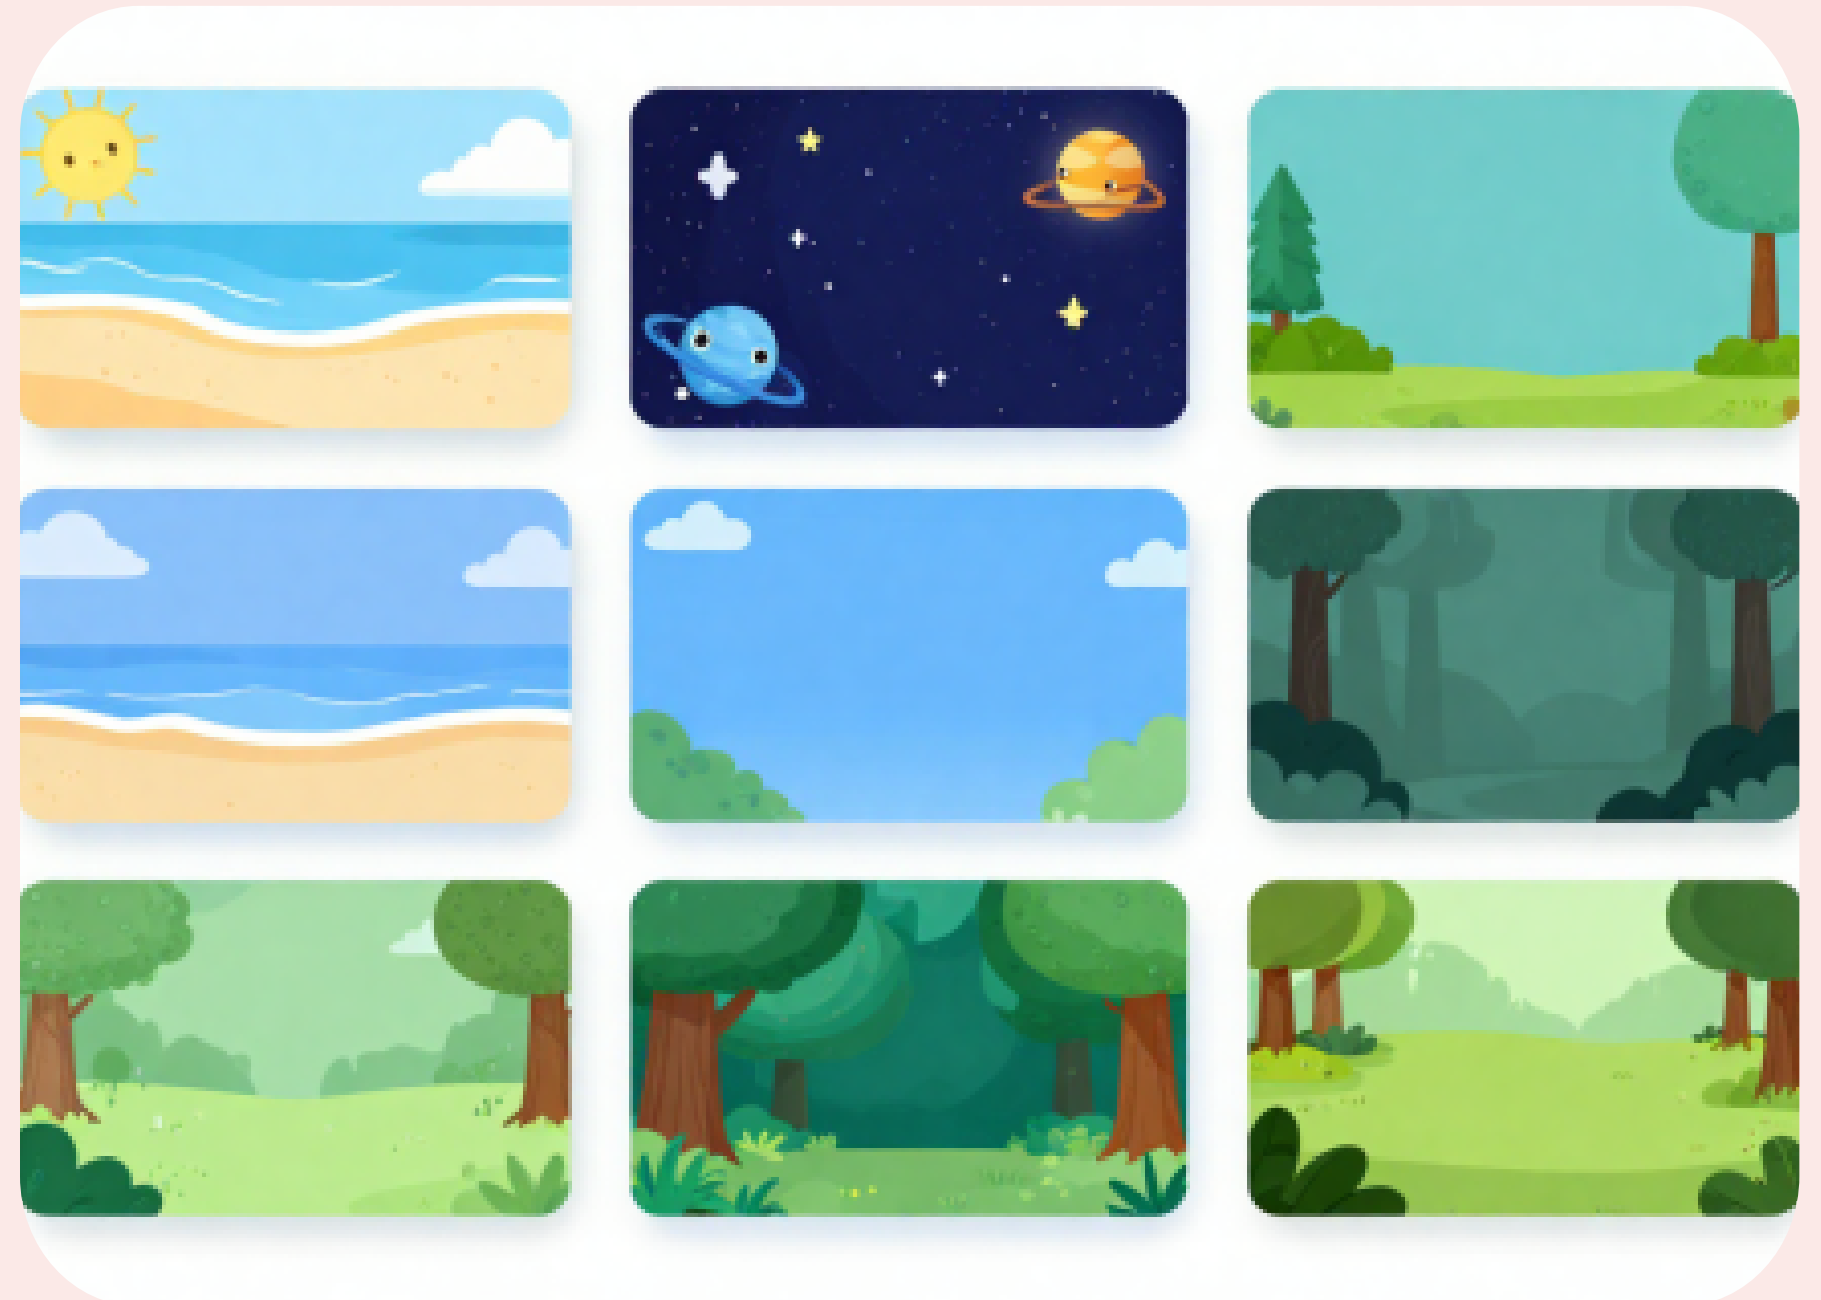

Backdrops — Dress the Stage!

A Backdrop is the background picture of the Stage.

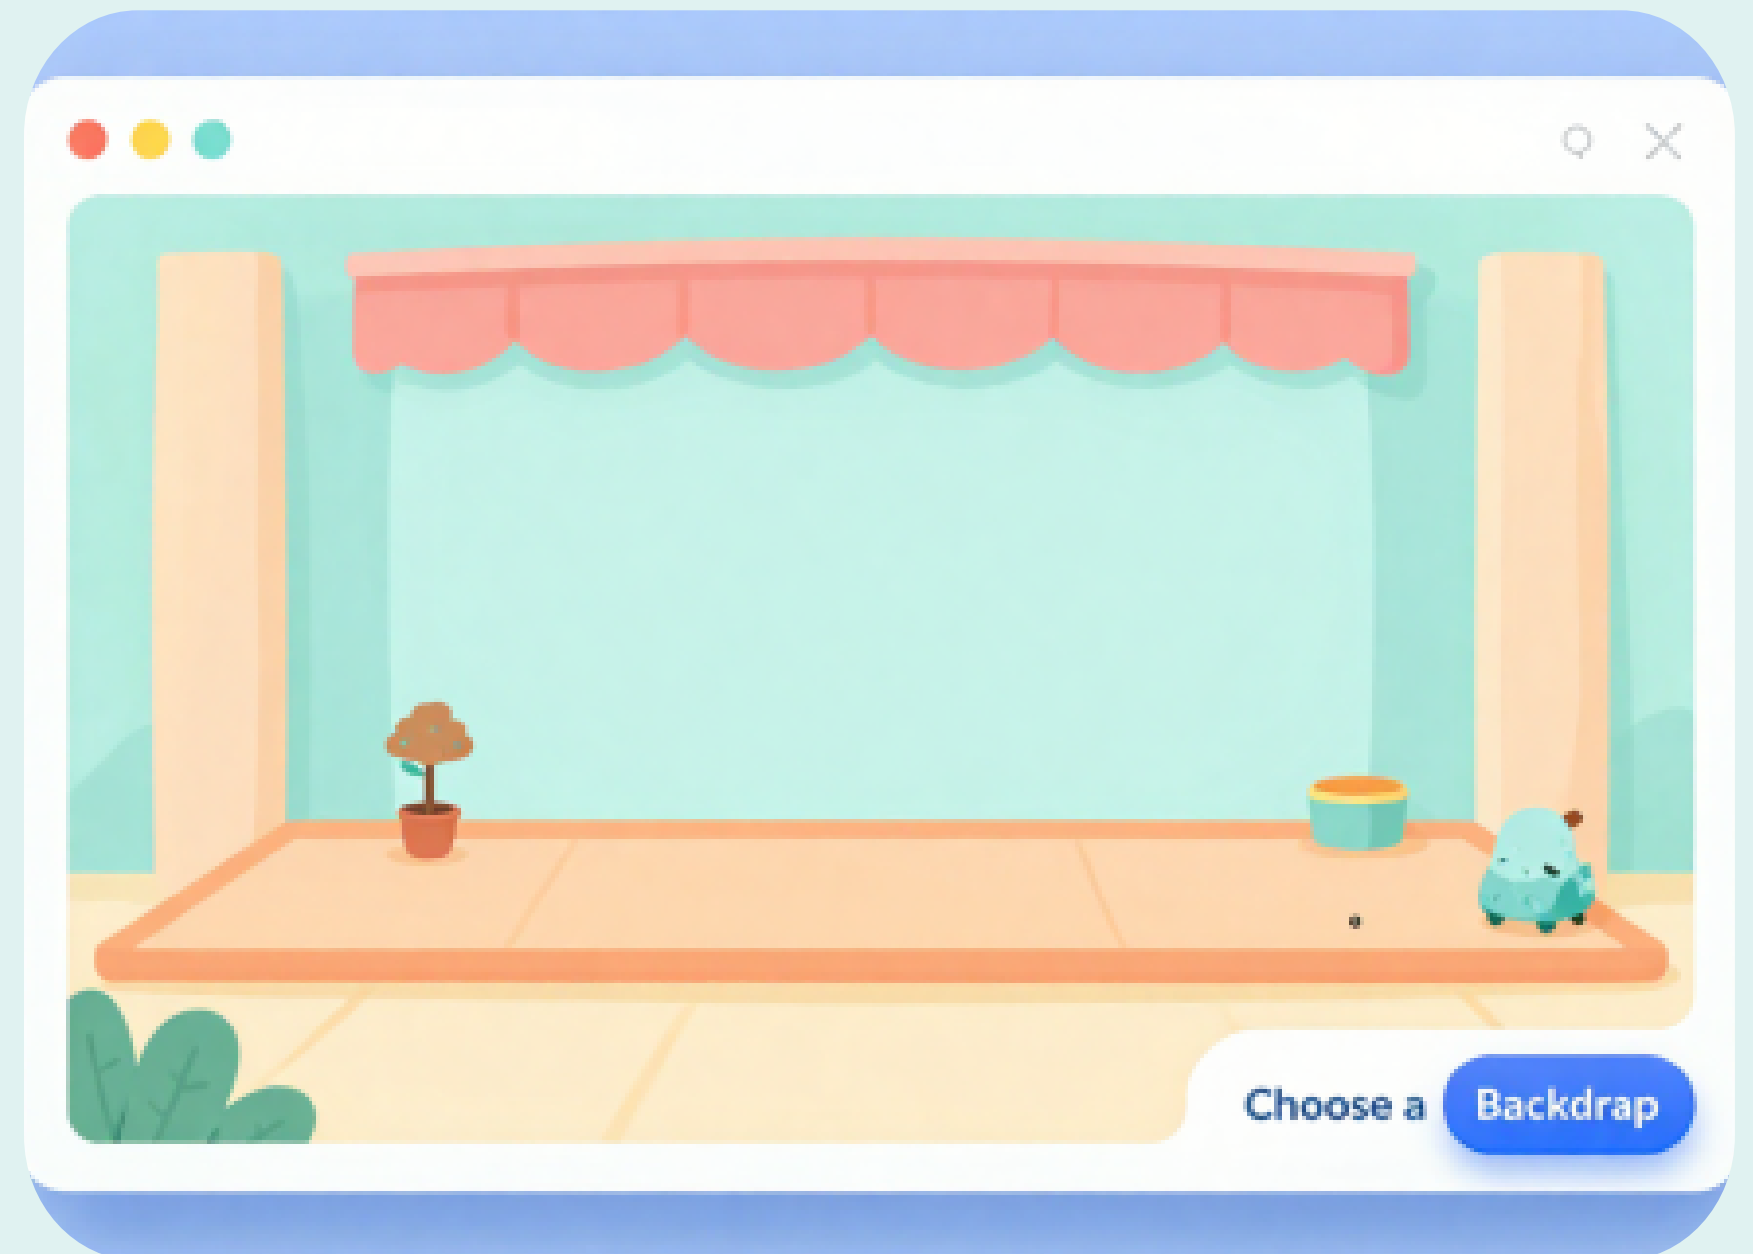

You can pick from the Scratch library:
beach, space, forest, city, and more!

It makes your story look real and fun.

How to Change a Backdrop

1. Click the Stage area (bottom right)
2. Click 'Choose a Backdrop'
3. Pick any backdrop you like!
4. Your Stage now has a new look!

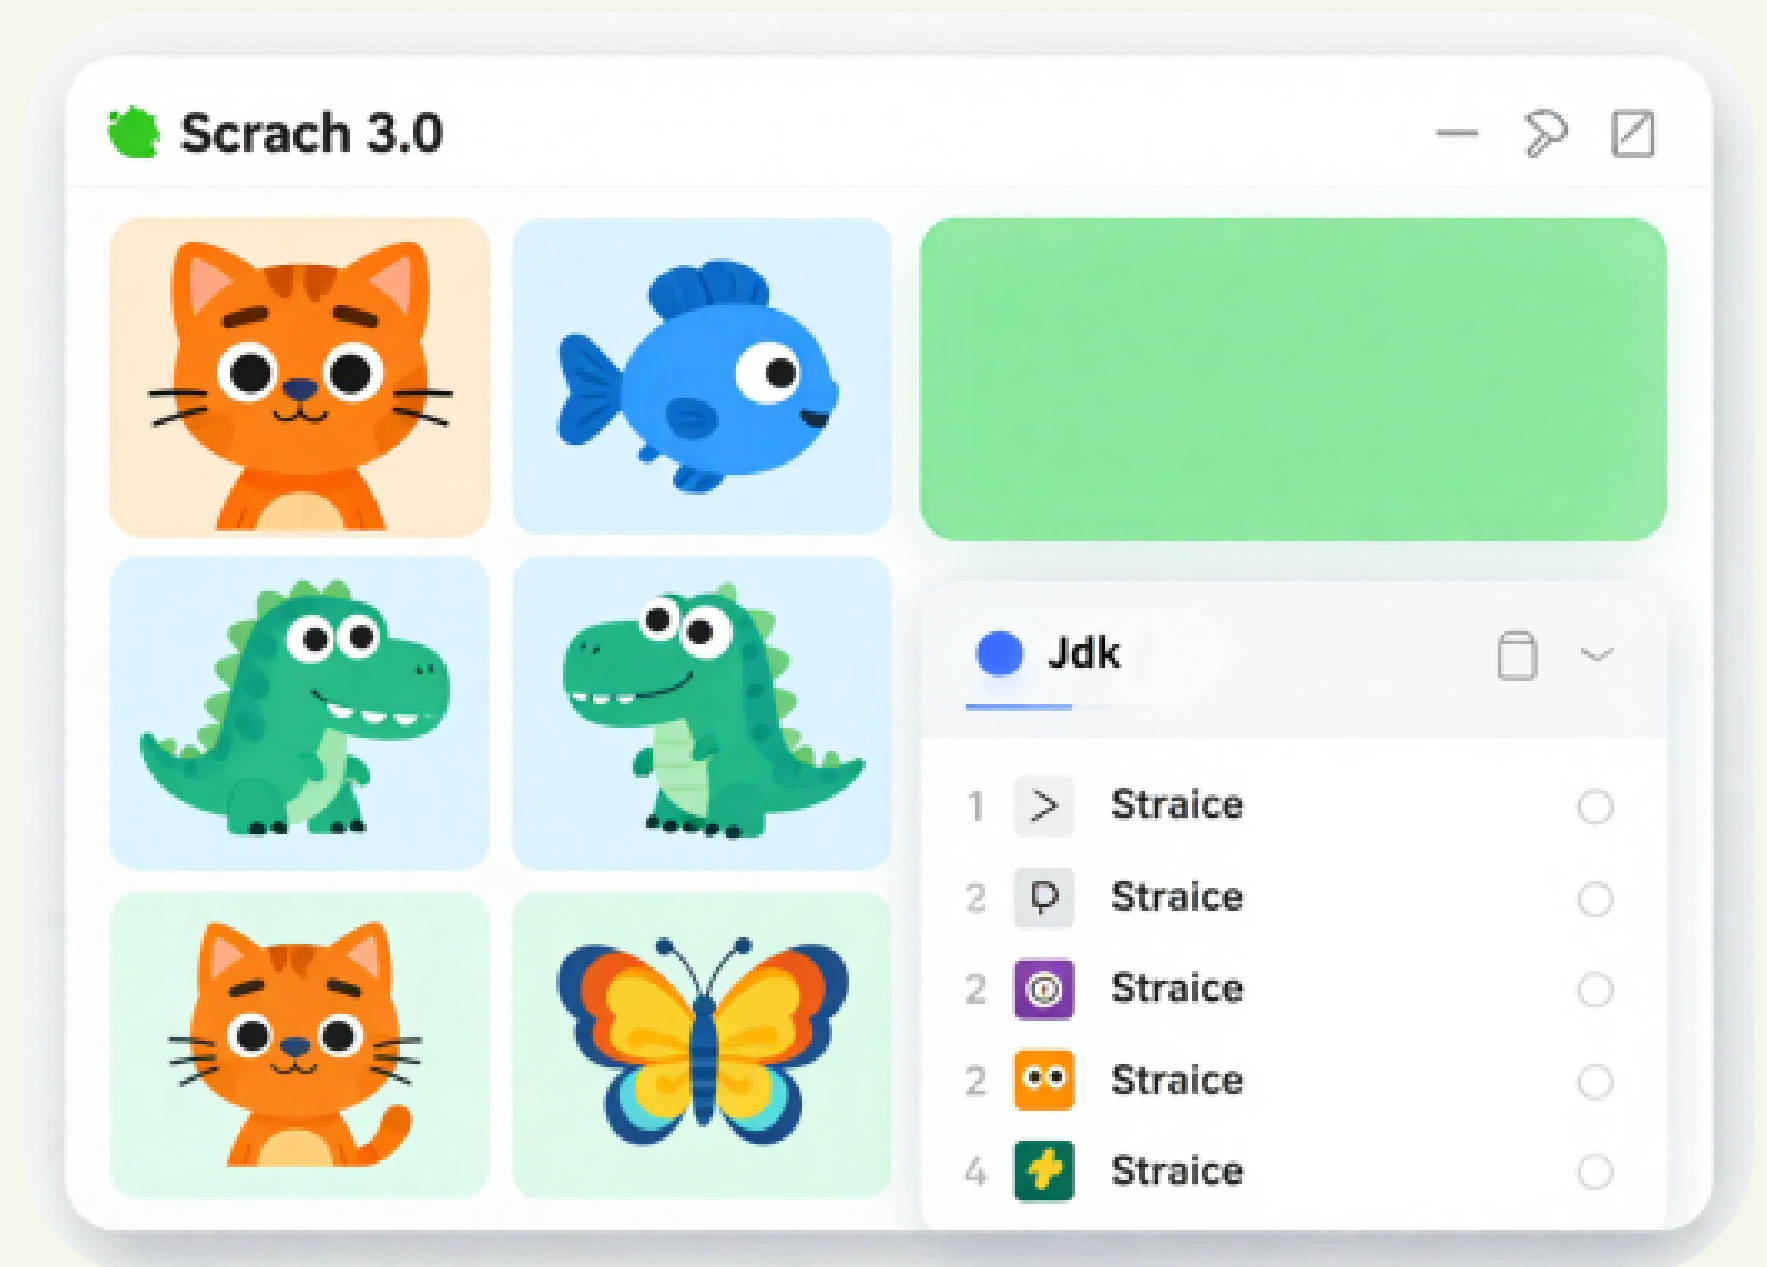

Sprites on the Stage

Sprites are the characters on your Stage.

The cat (Scratch Cat) is the default sprite.

You can add more sprites:
animals, people, objects, letters!

Moving Sprites Around

You can drag sprites with your mouse.

Or use code blocks:

'Go to x: __ y: __'

'Glide to x: __ y: __'

Try moving the cat to different spots!

Go to x **y**

Glide **x** **y**

Glide to **y**

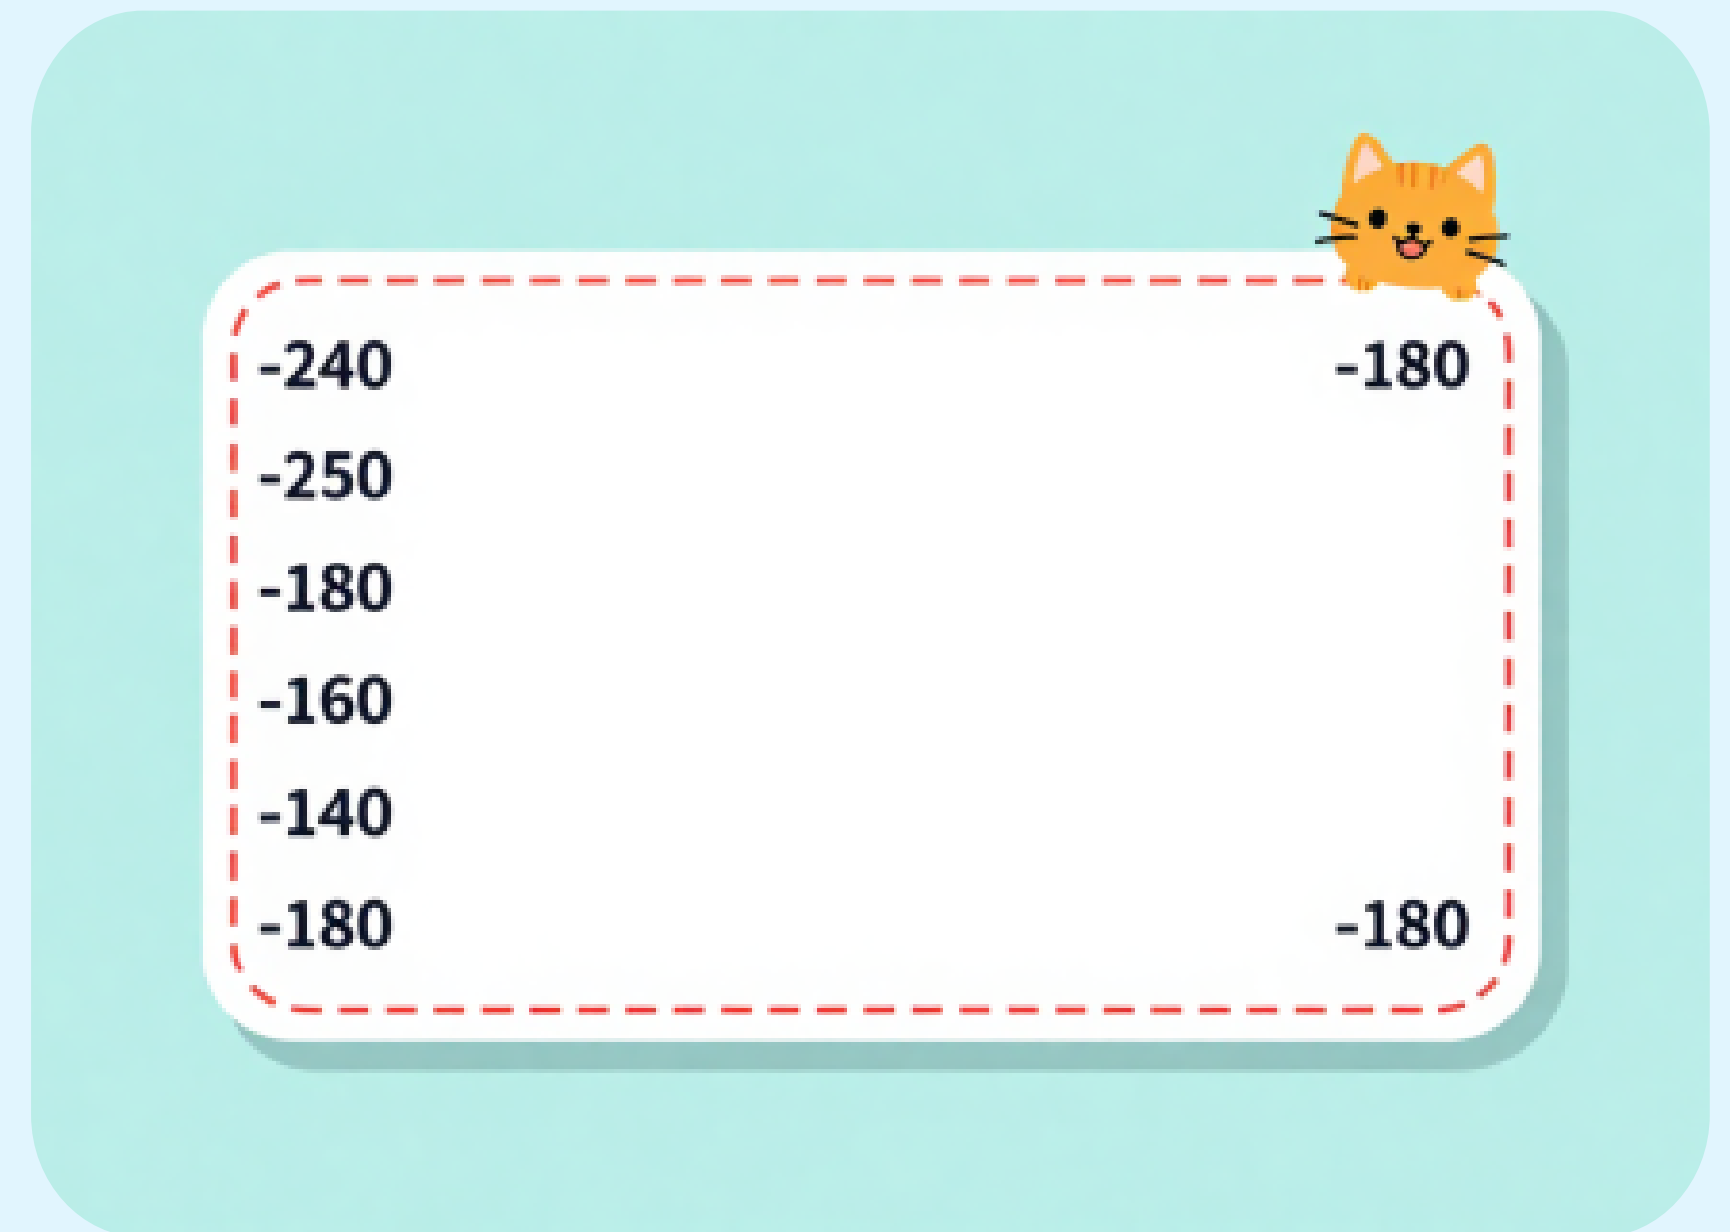

Stage Size & Boundaries

The Stage has edges – sprites can't go past them!

Width: 480 steps (-240 to 240)

Height: 360 steps (-180 to 180)

If a sprite hits the edge, it stops.

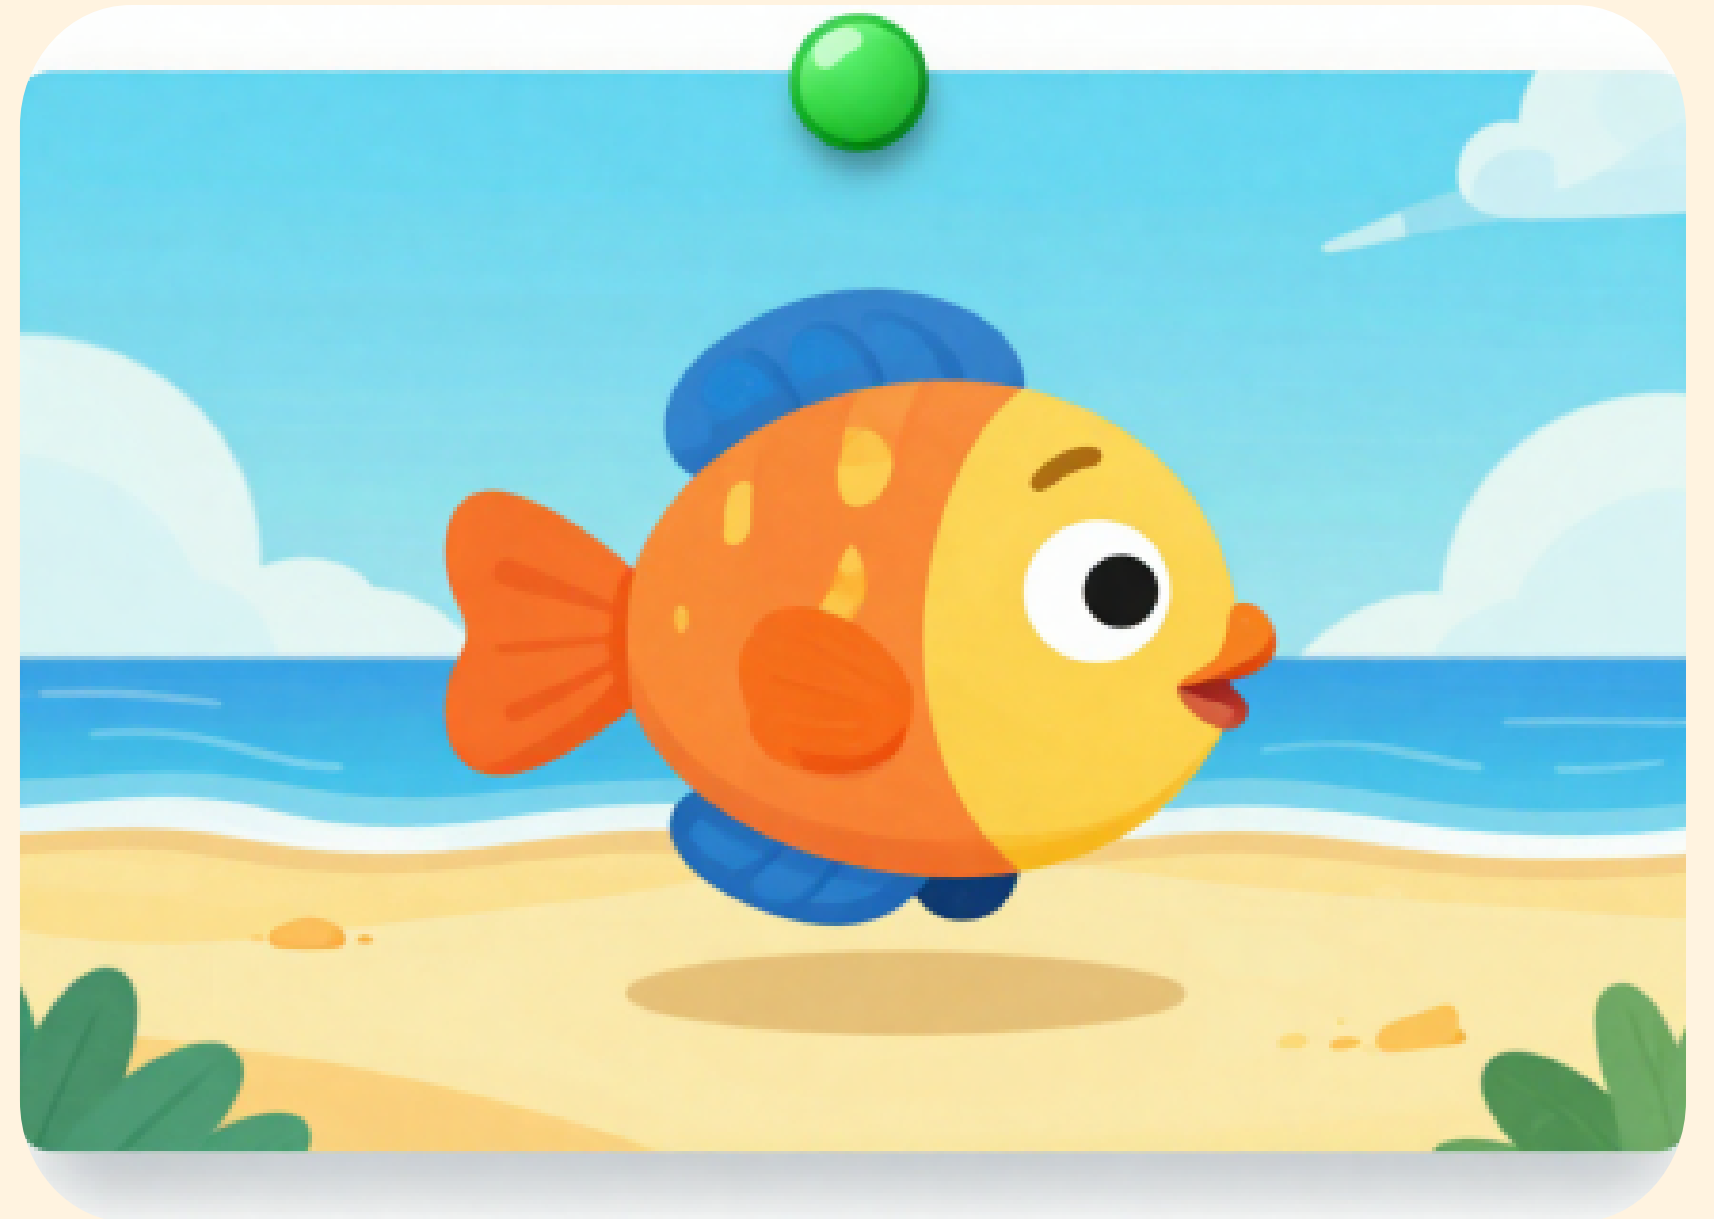

Let's Try It! — Activity

Open Scratch and do these:

1. Change the backdrop to 'Beach'
2. Add a new sprite (a fish or crab)
3. Drag the sprite to X: 100, Y: -50
4. Click the Green Flag – what happens?

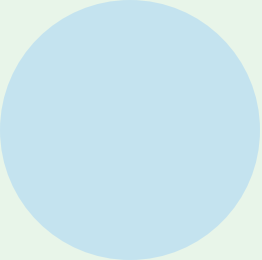

Have fun exploring the Stage!

Quick Quiz!

1. What is the Stage in Scratch?
2. What is the centre of the Stage? (X: ?, Y: ?)
3. What is a Backdrop?
4. Can a sprite go past the edge of the Stage?

Great Job! — Summary

Today we learned:

- * The Stage is where everything happens
 - * It has X and Y coordinates
 - * Backdrops make the Stage look cool
 - * Sprites live and move on the Stage
-
