

Cybersecurity

Phishing & Social Engineering

Stay Safe Online!

Grade 3 Lesson • Digital Literacy

■ Learning Objectives

- ✓ Understand what cybersecurity, phishing, and social engineering mean.
- ✓ Recognise the common tricks used by online attackers.
- ✓ Know the steps to take when something online feels wrong.
- ✓ Become a smart, safe digital citizen!

Section 1: What is Cybersecurity?

Cybersecurity means **keeping your computer and personal information safe** from bad people online. Think of it like a lock on your house — but for your computer! It keeps your private things protected.

■ The House Lock Analogy

Just like a lock keeps strangers out of your home, **cybersecurity keeps strangers out of your computer**. Your passwords are the keys — only YOU should have them!

Section 2: What is Phishing?

Phishing is when someone tries to **trick you online** to steal your personal information. Imagine a stranger sending you an email pretending to be your friend and asking for your password — that's phishing!

How Phishing Happens

■ The Trick

You get an email that looks like it's from your friend — but it's not!

■■ Watch Out

The email might say 'Click here for a surprise!' — it's really a trap.

■ Remember!

Always check who sent the message **BEFORE** clicking anything!

Common Tricks Used by Phishers

■ Pretending

Acting like your friend or teacher online.

■ Scary Messages

'Your account will be closed!' — to panic you.

■ Asking Secrets

Asking for passwords or secret codes.

■ Fake Prizes

'You won a gift!' — but it's a lie!

Section 3: What is Social Engineering?

Social engineering is when people trick you by **pretending to be someone you trust** — like your teacher, parent, or school principal — to get your secret information.

■ Real-Life Example: The Fake Principal

- A stranger calls pretending to be your school principal.
- They sound friendly and say it's urgent.
- They ask for your secret code or password.
- REMEMBER: Real principals NEVER ask for your password!

How Social Engineering Works

■ The Story

They claim to be someone important you should trust.

■ The Urgency

They say it's an emergency to rush your decision.

■ The Ask

They request your secret code, password, or personal info.

Section 4: How to Spot Phishing & Stay Safe

Spotting Phishing Emails

■ Check Sender

Look carefully — is it really from who it claims?

⇒ ■ Spelling Errors

Fake emails often have spelling mistakes.

■ Strange Links

Never click links from people you don't know!

Your Online Safety Rules

■ Keep Passwords Secret

Never share your password with ANYONE — not even friends!

■ Only Talk to People You Know

Don't chat with strangers online.

■ Don't Click Strange Links

Avoid pop-ups and unknown links.

■ Tell a Trusted Adult

If something feels wrong, ask for help straight away.

■ What To Do When You're Unsure

- STOP & THINK — before clicking or replying, pause and think carefully.
- ASK FOR HELP — talk to a parent, teacher, or trusted adult.
- KEEP SECRETS SAFE — never share your password or personal info with anyone.
- Remember: It is always okay to ask for help!

Section 5: Why Does Cybersecurity Matter?

■■ Protect Your Info

Cybersecurity keeps personal details safe from tricksters.

■■■■■ Keep Family Safe

When YOU stay safe online, you help protect your whole family!

■ Be a Smart Citizen

Learning cybersecurity helps you make good choices every day.

■■ Did you know? **Millions of people** get tricked online every year and lose their personal information. You can help stop this by being careful!

Quick Recap

Term	Meaning	What to Do
■ Cybersecurity	Keeping devices & info safe from bad people.	Use strong passwords; keep devices updated.
■ Phishing	Fake messages that try to steal your info.	Check sender; never click strange links.
■ Social Engineering	People pretending to be someone you trust.	Never share secrets; ask a trusted adult.

Section 6: Fun Quiz — Are You a Cybersecurity Hero? ■

Circle the best answer for each question.

1. What should you do if someone asks for your password?

- (A) Tell them right away.
- (B) Never share it and tell a trusted adult.
- (C) Write it down for them.

2. How can you tell a phishing email?

- (A) It has spelling mistakes and asks for personal info.
- (B) It comes from your best friend.
- (C) It has pretty pictures.

3. A stranger online says you have won a prize. What do you do?

- (A) Click the link to claim your prize!
- (B) Ignore it and tell a trusted adult.
- (C) Share it with all your friends.

4. Someone calls saying they are from your school and needs your secret code. What do you do?

- (A) Give it to them — they sound official.
- (B) Hang up and tell a parent or teacher immediately.
- (C) Ask them to call back later.

■ Answer Key: 1 → B 2 → A 3 → B 4 → B

Discussion Questions & Class Activity

- 1. Can you think of a time you received a suspicious message? What did you do?
- 2. What information should you NEVER share online? Make a list!
- 3. How would you explain phishing to a younger student?
- 4. Role-play: One student is a phisher, the other practises saying NO and telling a trusted adult.

■ My Cybersecurity Hero Pledge

I, _____, promise to:

- Keep my passwords secret and not share them with anyone.
- Not click on strange links or messages.
- Tell a trusted adult if something online feels wrong.
- Be a smart and kind digital citizen every day!

Signature: _____ Date: _____

■ Remember: You are a Cybersecurity Hero! Stay curious, stay safe, and always ask for help.
