

A Fun Science Experiment!

WATER CYCLE IN A BAG

WONDER QUESTION

Riya saw puddles after rain.
Next morning, they were GONE!
Where did the water go?

WHAT WE WILL LEARN TODAY

Discover the water cycle
Do a fun experiment
See rain happen in a bag!

MEET BINDI THE WATER DROP

Once upon a time, a little water drop named Bindi lived in a big pond near a village.

EVAPORATION – WATER GOES UP!

When water gets warm,
it floats UP as invisible vapour!

CONDENSATION – TINY DROPS FORM

Water vapour meets cool air
and forms tiny drops!

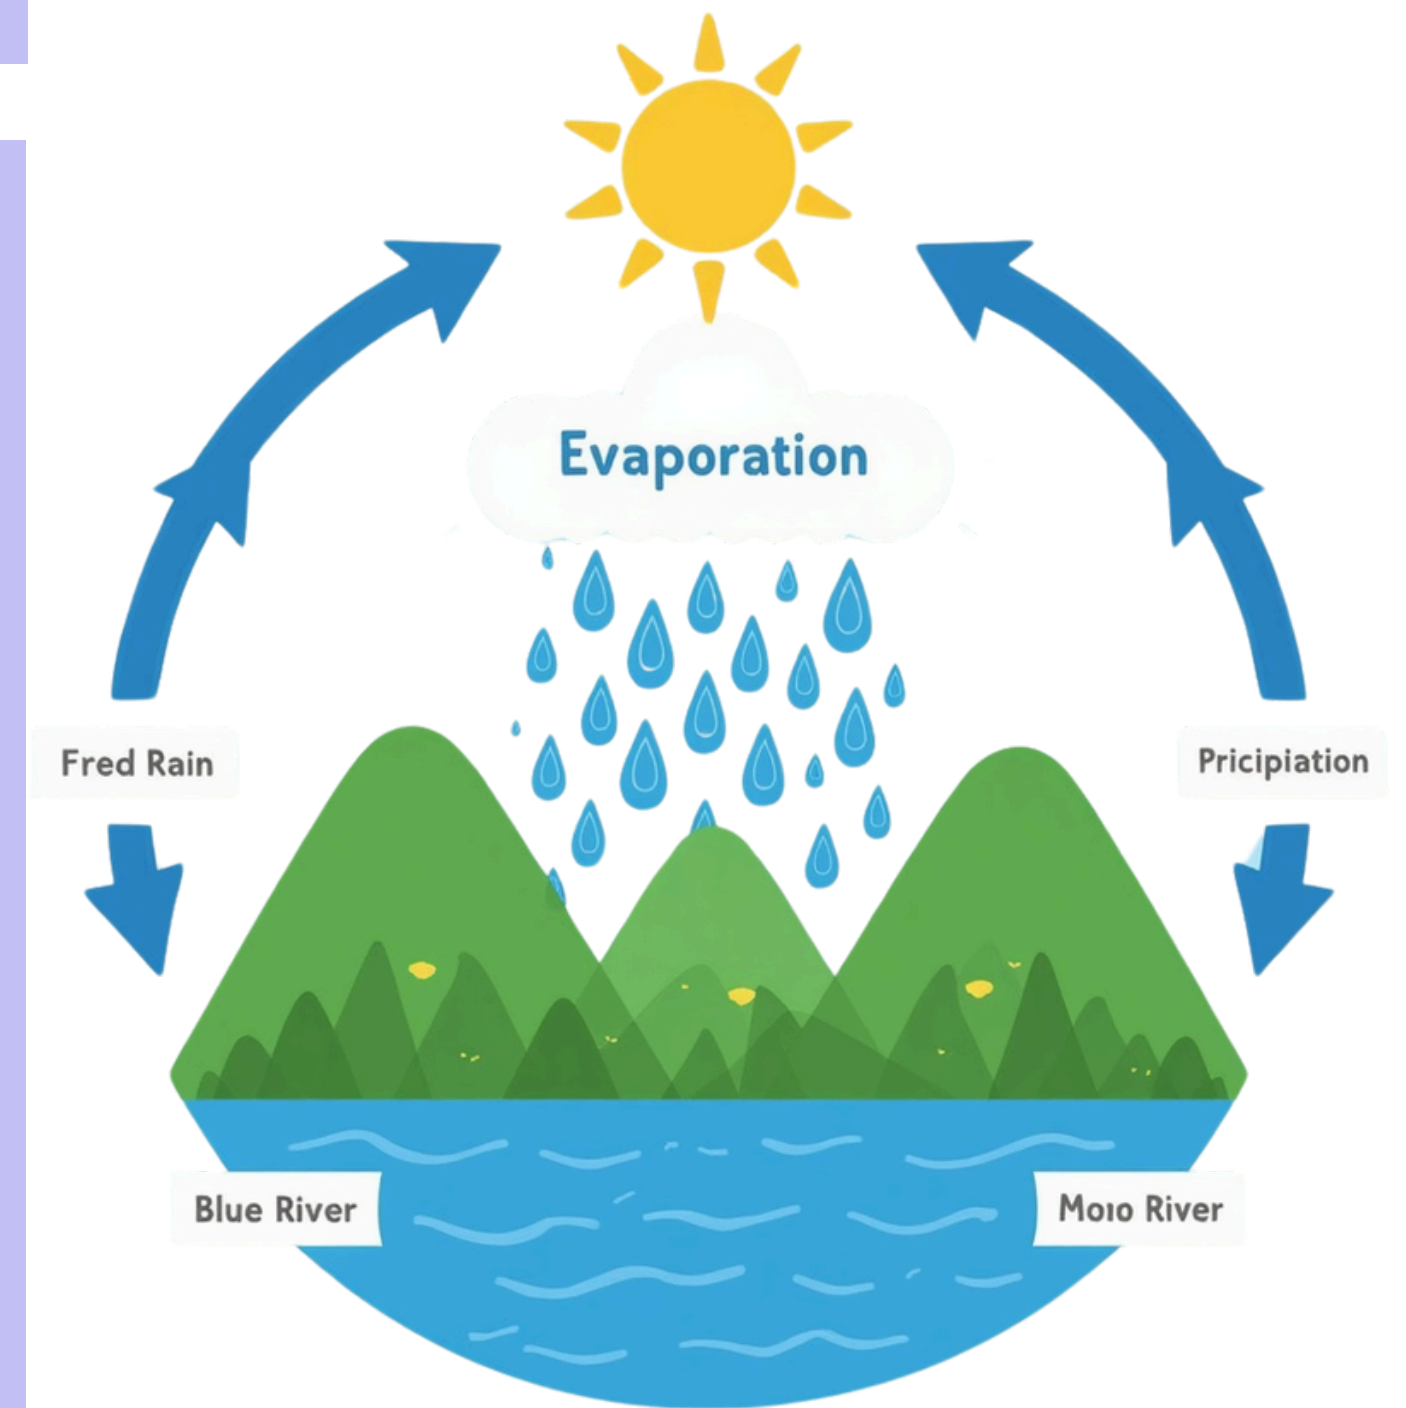

PRECIPITATION – RAIN FALLS DOWN!

When drops get heavy,
they fall as rain! (Barish/Varsha)

THE WATER CYCLE – ROUND AND ROUND!

Water goes round and round –
up as vapour, into clouds, then rain,
back to rivers!

WHAT WE NEED FOR OUR EXPERIMENT

1

Zip-lock / resealable plastic bag

2

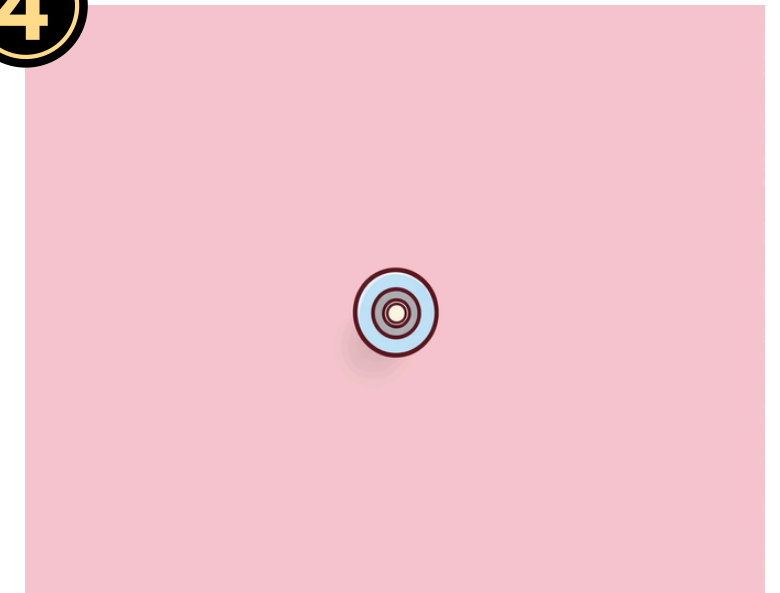

Water (approx. ½ cup)

3

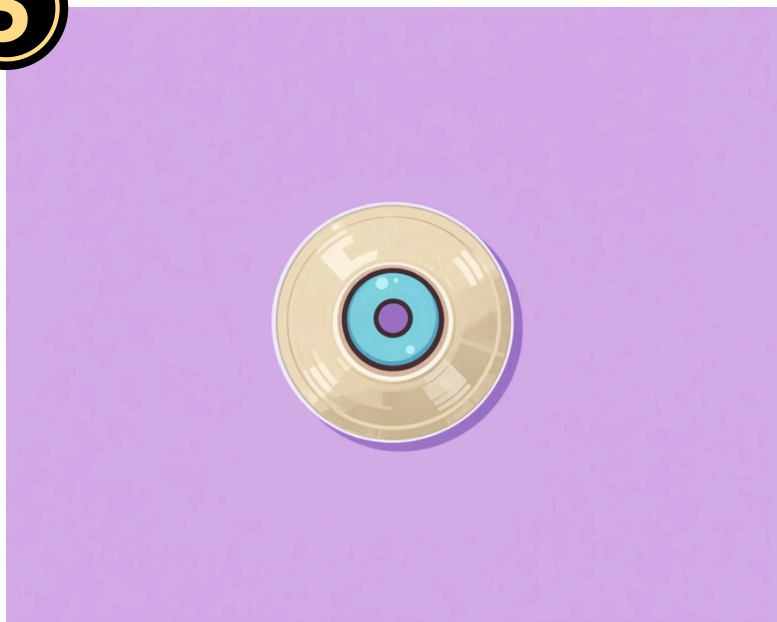

Blue food colouring (a few drops)

4

Permanent marker / sketch pen

5

Clear adhesive tape

6

A sunny window or lamp

STEP 1

“Pour about 1½ cup of water into the zip-lock bag. Add 2-3 drops of blue food and mix.”

STEPS 2 & 3

“Seal the zip-lock back firmly
and then tape the bag to a
window.”

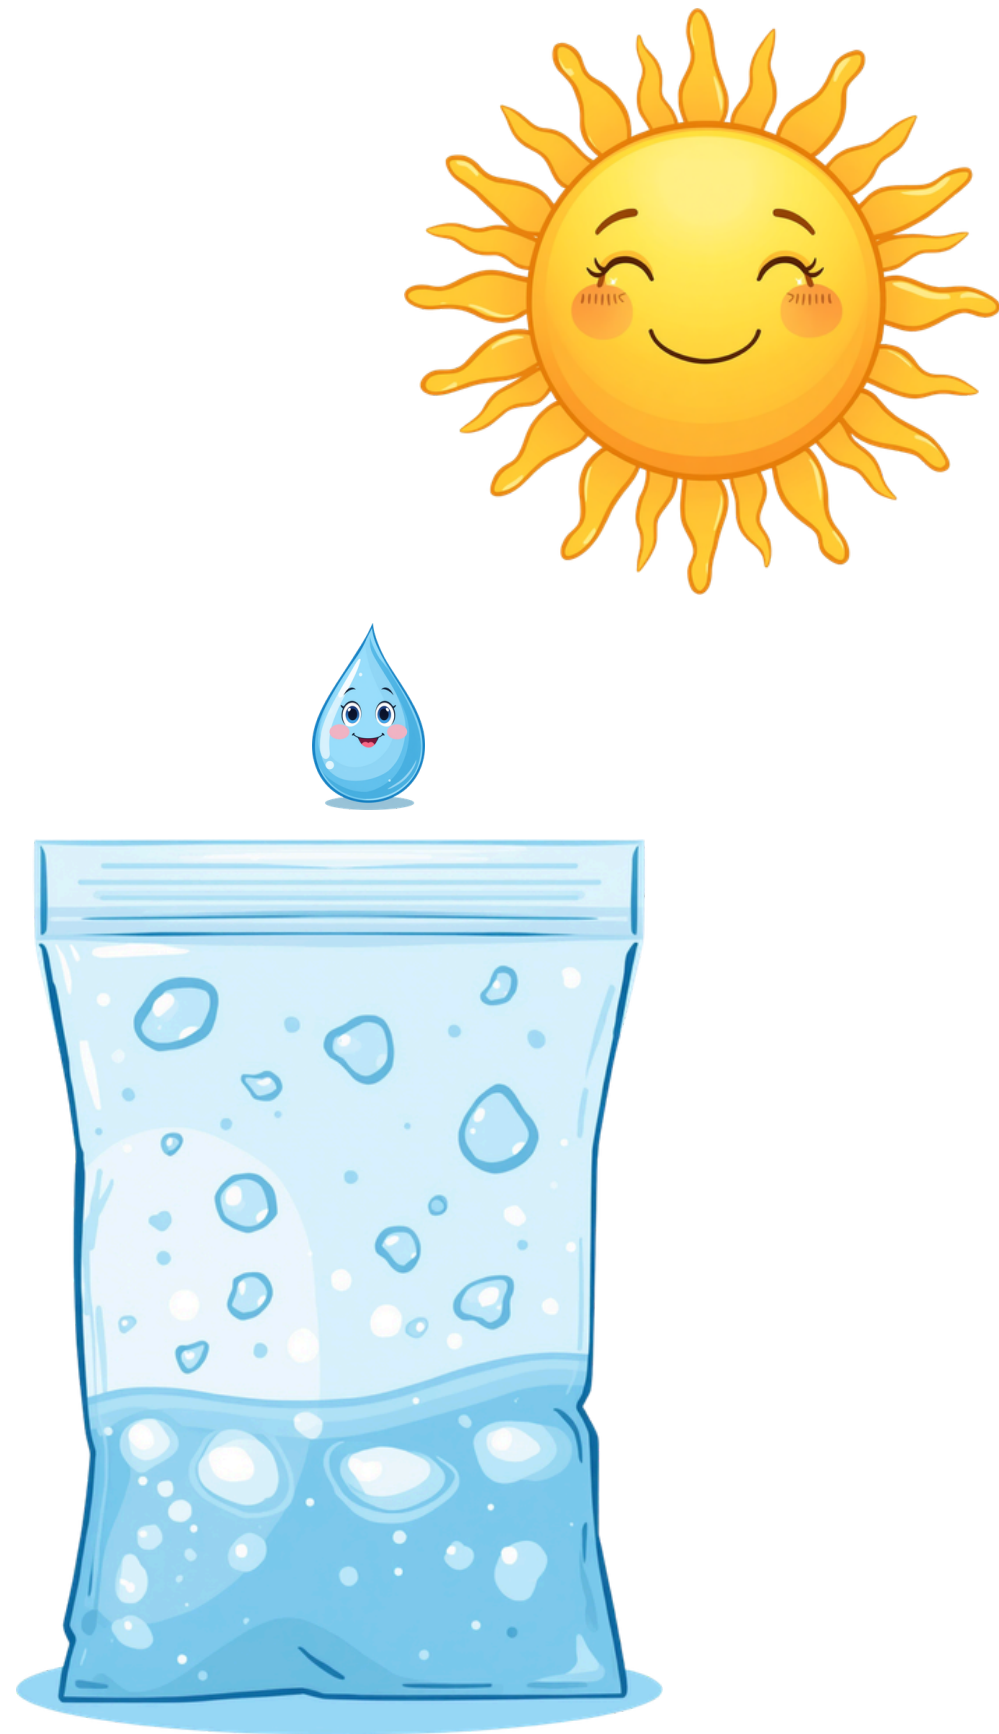

Step-by Step

OBSERVE LIKE A SCIENTIST!

- What do you see inside?
- Where are drops forming?
- Is water going up or down?

WHAT WILL HAPPEN?

Bag fogs up, drops form on top, then drip down – water cycle magic!

CLASS CHANT & WRAP-UP

EVAPORATION – UP!
CONDENSATION – COOL!
PRECIPITATION – DOWN!
WATER CYCLE – ALL AROUND!

THANK YOU!

Ask questions,
share observations,
show your bag to
family!
