

Rainbow in a Glass Experiment

What is a Rainbow?

A rainbow is colors in the sky after rain. It has many beautiful colors — red, orange, yellow, green, blue, and purple!

Why Make a Rainbow in a Glass?

Let's make a rainbow in a glass to
see colors up close!

Materials You Need!

Gather these things:

water

sugar

spoon

food coloring

clear glass

measuring cup

Step 1 – Sugar Water!

Mix sugar with water in different amounts to make heavy and light liquids. Use more sugar for heavy water and less sugar for light water!

Step 2 – Add Colors!

Add different food colors to each sugar water bowl. Use red, orange, yellow, green, blue, and purple!

Step 3 – Pour First!

Pour the heaviest (most sugar) colored liquid into the glass first. Pour it slowly and carefully!

Step 4 – Layer the Colors!

Slowly pour the other colors one by one on top. Pour gently over a spoon so the layers don't mix. Watch the rainbow form!

Look! Your rainbow in a glass is ready!

You made a beautiful rainbow using colored sugar water!

What Happened?

Sugar makes water heavy. Heavier liquid sinks to the bottom. Lighter liquid floats on top. That is why we see beautiful layers!

Colors of the Rainbow

Red, Orange, Yellow, Green,
Blue, Purple

These are the beautiful colors
we see in our rainbow glass!

☆ Fun Facts About Rainbows! ☆

Rainbows are made by sunlight and rain.

You can't touch a real rainbow!

Rainbows have 7 colors, but we see 6 in this experiment.

Safety Tips

Adult help is important. Don't drink the colored water!

Clean up spills quickly and wash your hands after!

Recap: Rainbow in a Glass!

Let's remember how we made our rainbow in a glass. You did great, scientists!

🌈 Make sugar water with different amounts.

🎨 Add food colors to each bowl.

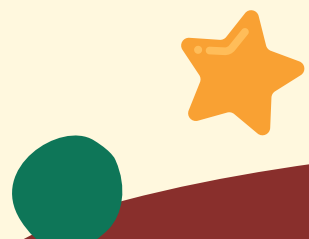

⬇️ Pour liquids slowly — heaviest first!

✨ Watch the colours layer up!

Try It Yourself!

You can make your own rainbow in a glass! Ask an adult to help you at home or school. It's fun and easy!
