

The background is a solid yellow color. Scattered around the central text box are various geometric shapes: a small blue triangle in the top left, a teal pentagon in the top left, a small white hexagon in the top center, a pink five-pointed star in the top right, a large teal five-pointed star on the right edge, a small white hexagon on the left edge, a large pink five-pointed star in the bottom left, a small blue triangle in the bottom left, a teal four-pointed star in the bottom center, a small white hexagon in the bottom center, a pink trapezoid in the bottom right, and a small blue triangle in the bottom right.

Geometry Art: Symmetry

What Do You See?

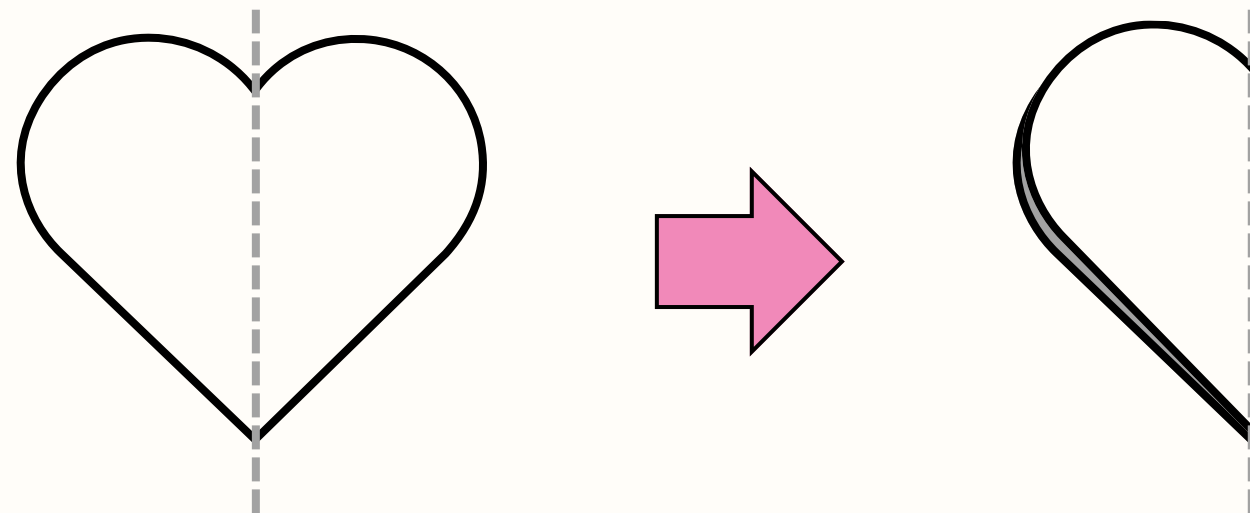

Look at these pictures: butterfly, diya, mango leaf, squiggly line, torn paper

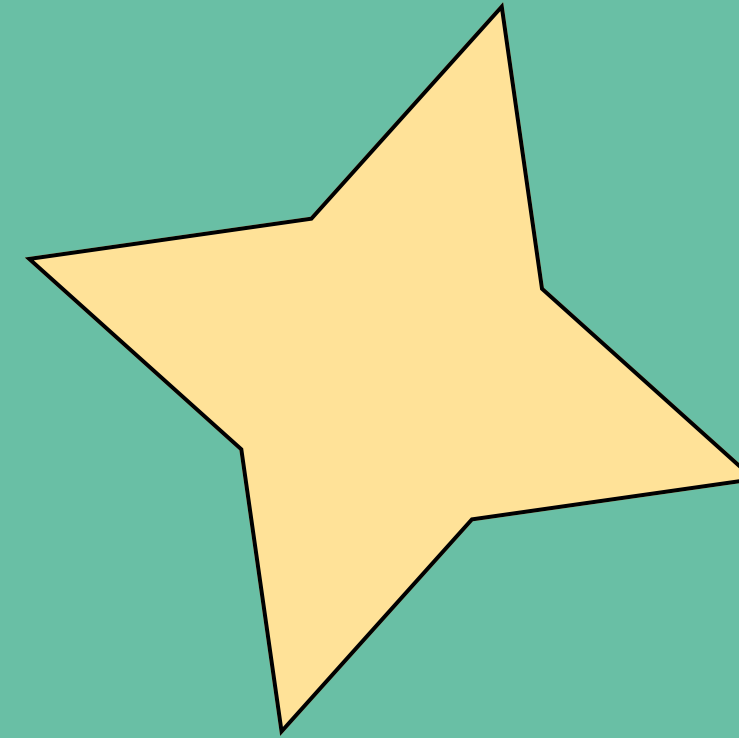

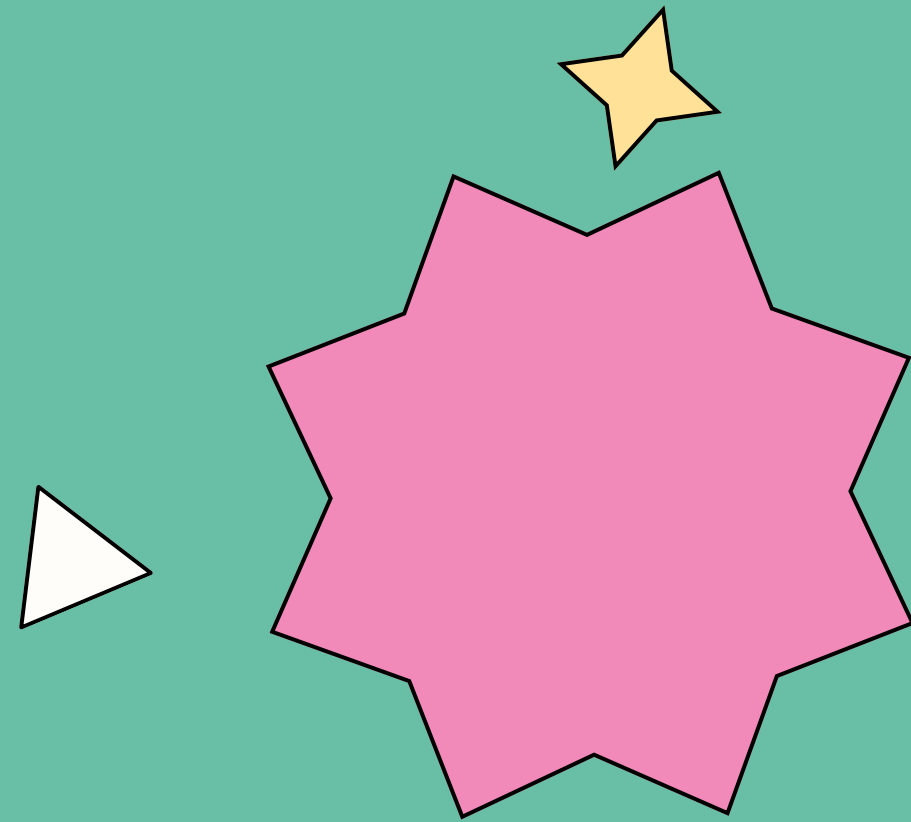

Which ones look the SAME on BOTH sides? 🤔

The Folding Secret

When you fold a shape in the middle and both sides match perfectly, it has symmetry.
Let's see the magic of folding!

Key Words

Symmetry
Both sides of a shape look the same after folding.

Half
One of two equal parts when you fold along the line of symmetry.

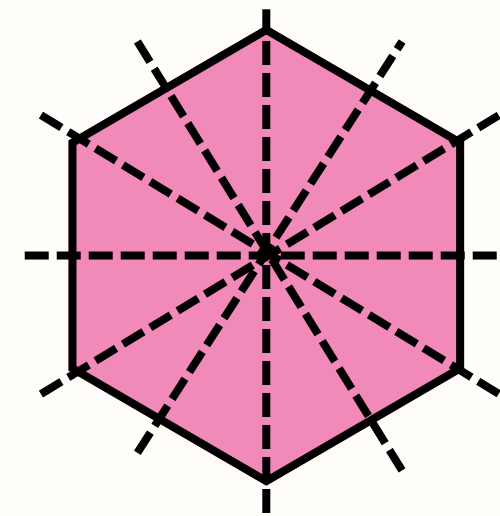

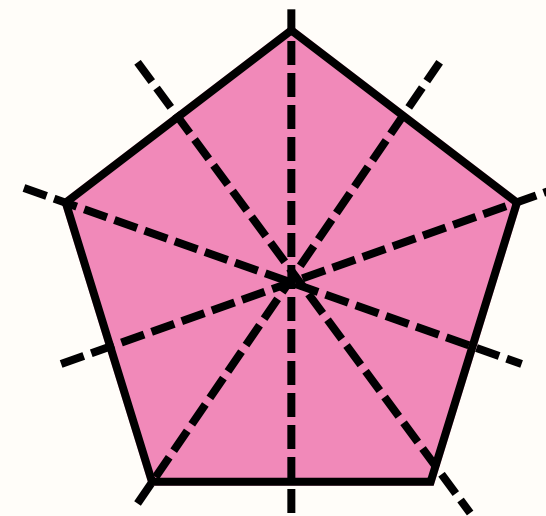

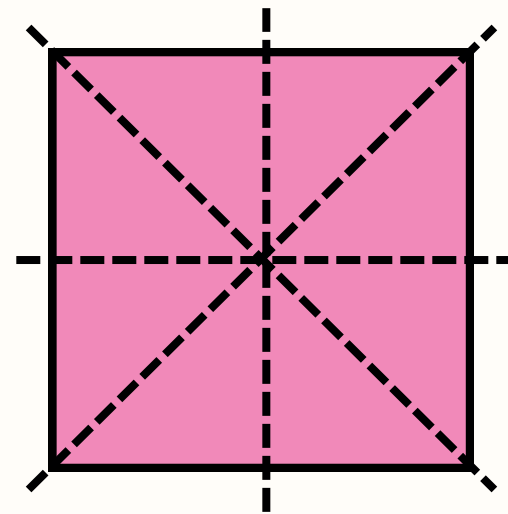

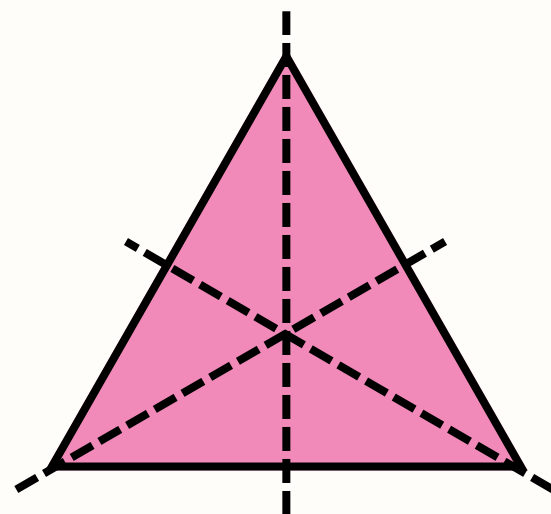

Line of Symmetry
The imaginary line where you fold a shape so both halves match.

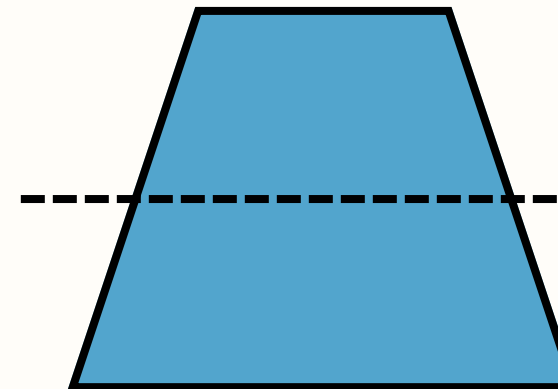

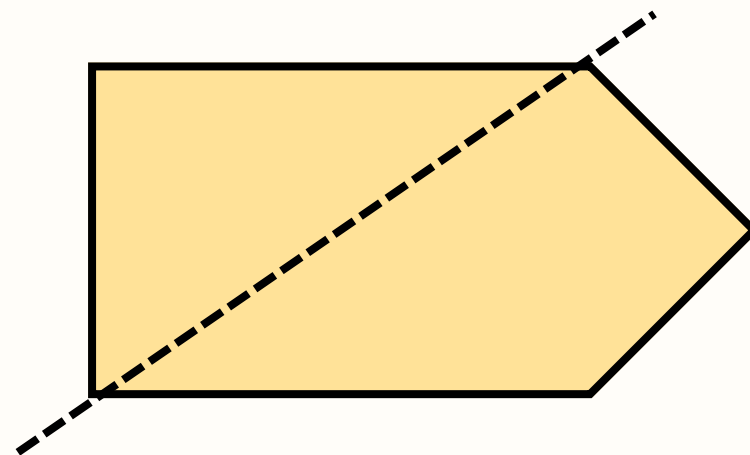

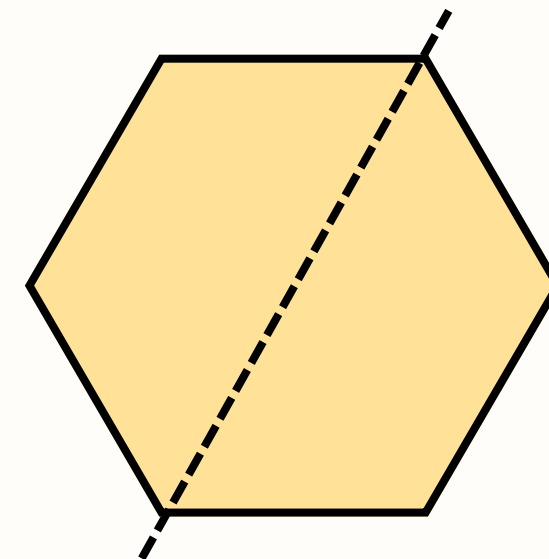

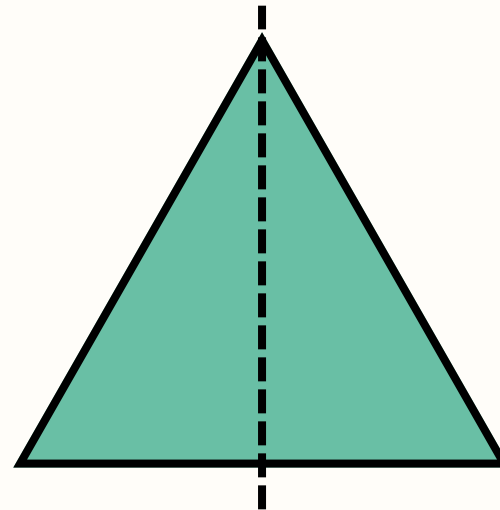

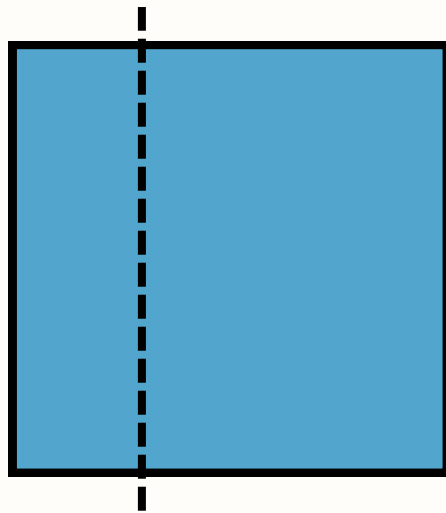

Symmetric and Asymmetric Examples

Some shapes look the same on both sides. Some do not!

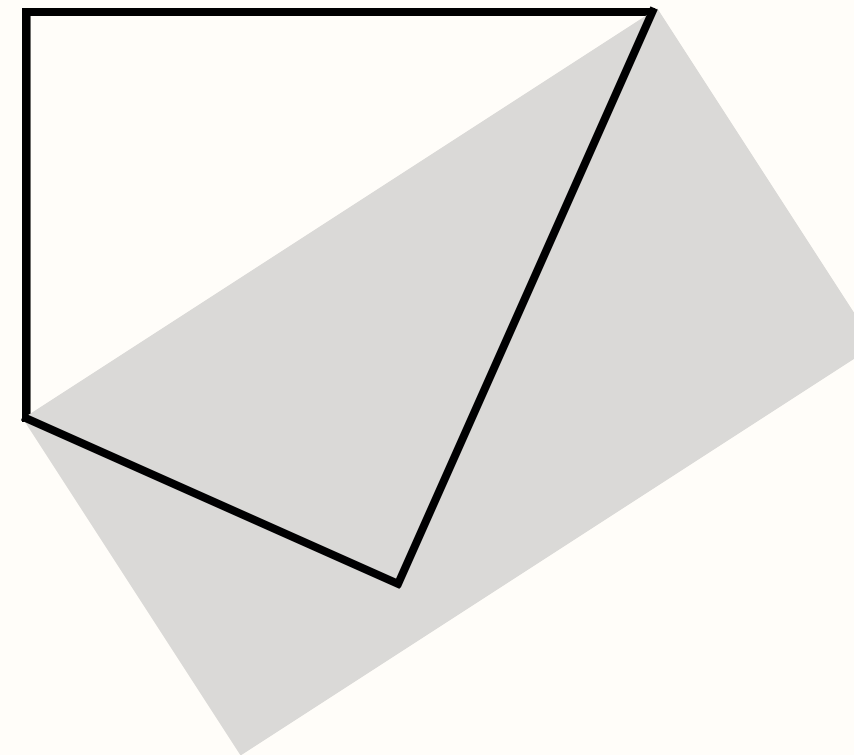

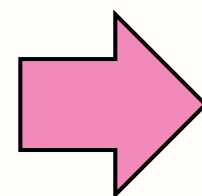

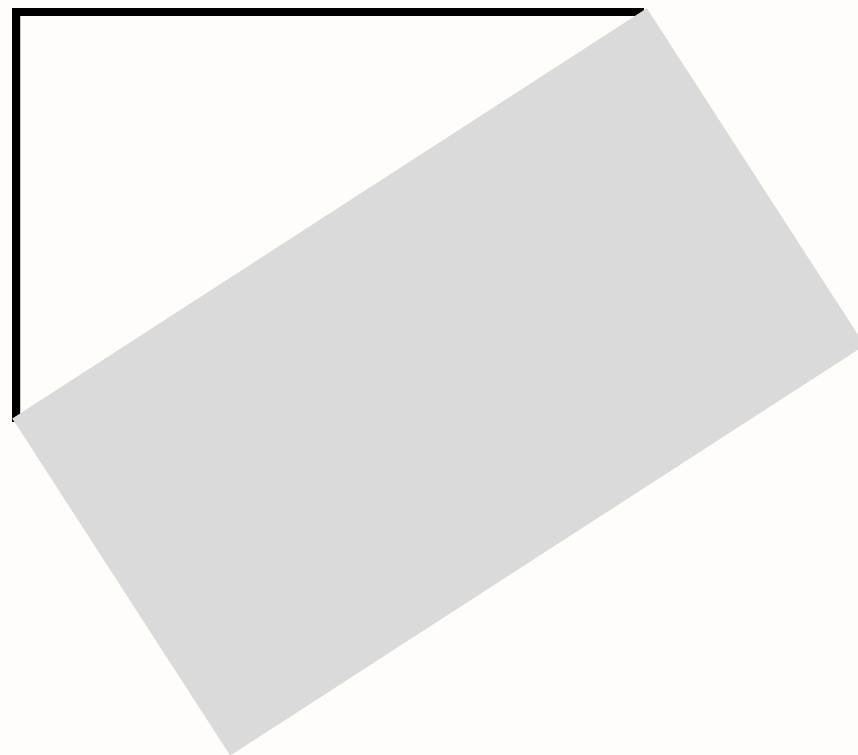

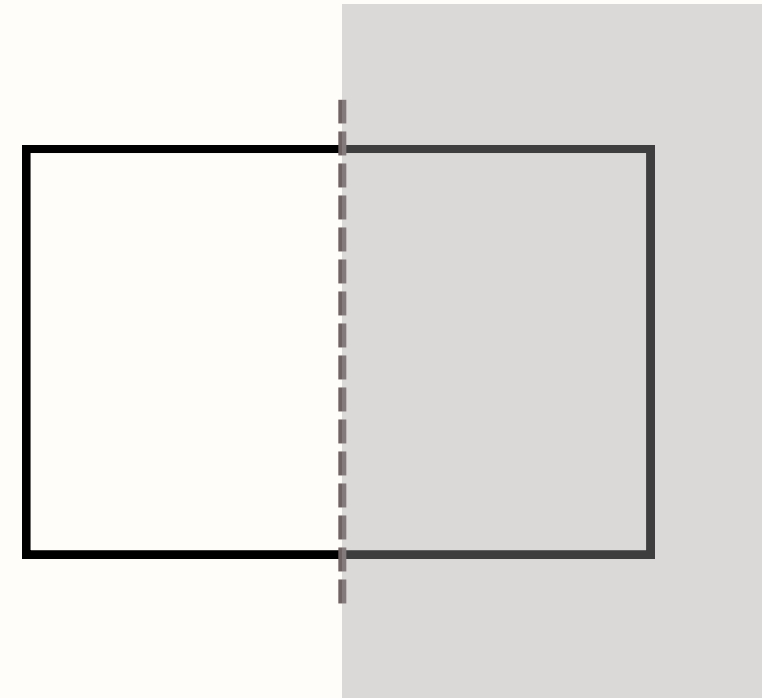

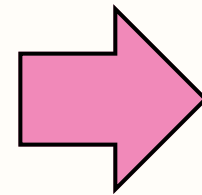

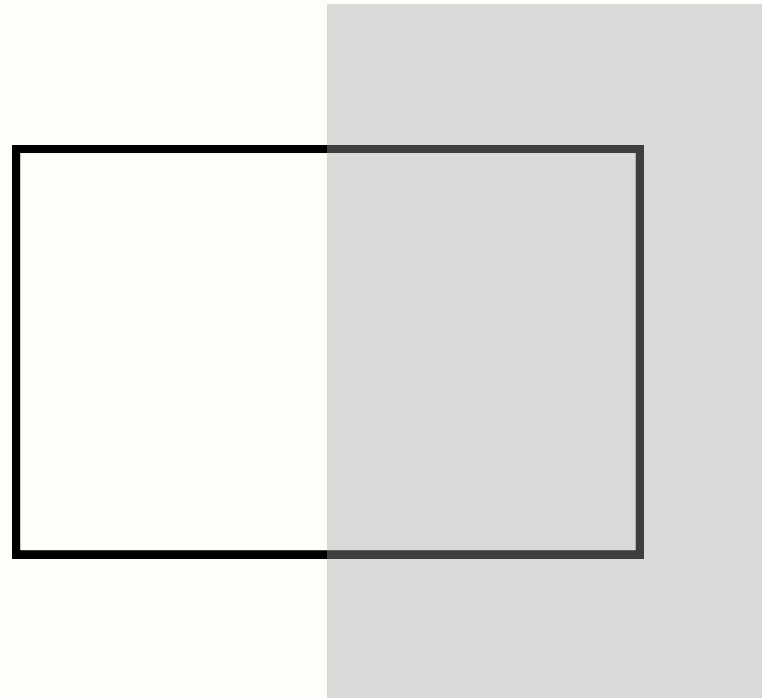

Look at the dotted lines! These show where the shape can fold to match perfectly.

Spot the Symmetry! Which shapes have symmetry?
Say "Symmetry!" or "No symmetry!" aloud:

Can you draw the line of symmetry on these shapes?

*Draw a line down
the middle!*

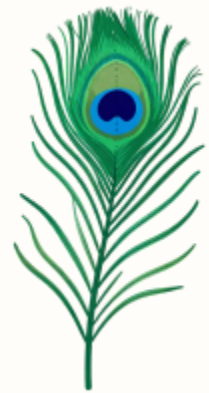

Find Symmetric Things at Home

Look around your home! Can you find 2 or more things that look the same on both sides?

These everyday things have symmetry! Both sides match when you draw a line down the middle.

Sharing Our Artwork

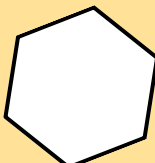

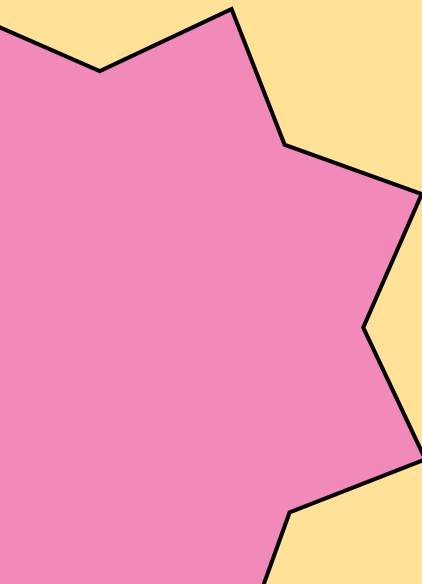

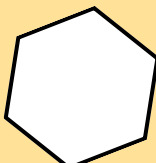

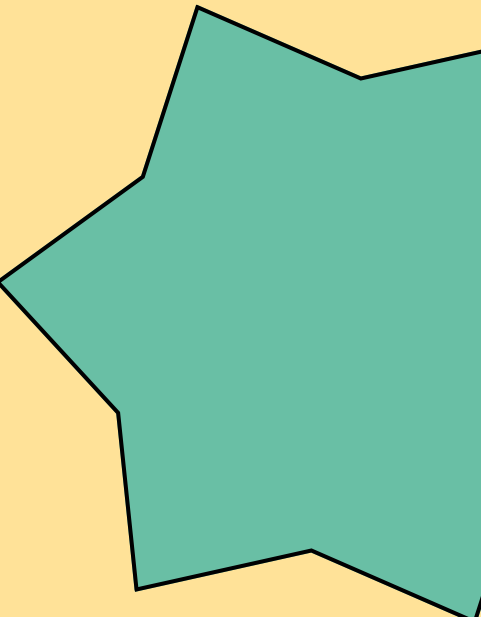

Let's show and tell! What did you create? Every artwork is special and beautiful. We celebrate every attempt!

Exit Ticket: What Did You Learn?

Think about what you learned today! Can you answer these questions?

1. Name one symmetric thing you know.
2. Name one thing that is NOT symmetric.
3. Where do you draw the line of symmetry on a triangle?
4. True or false : Squiggly line has symmetry.

Thank You & See You Next Time!
