

**Magnet Explorer:
Discovering the
Magic of
Magnets!**

Arjun's Lost Pin

THE MAGNET MYSTERY!

Arjun lost his sewing pin on the floor. Oh no!
But clever Dadi had a magical idea – she
used a magnet to find it!

A magnet is a special object that has an invisible force called magnetic force. This invisible force can pull some things toward it like magic! You cannot see it, but you can feel it working!

Types of Magnets

BAR MAGNET

A long rectangular magnet you see in your classroom. Great for experiments!

HORSESHOE MAGNET

Shaped like a horseshoe! Very strong at picking up iron objects.

FRIDGE MAGNET

Fun magnets on your refrigerator door at home! They hold notes and pictures.

COMPASS NEEDLE

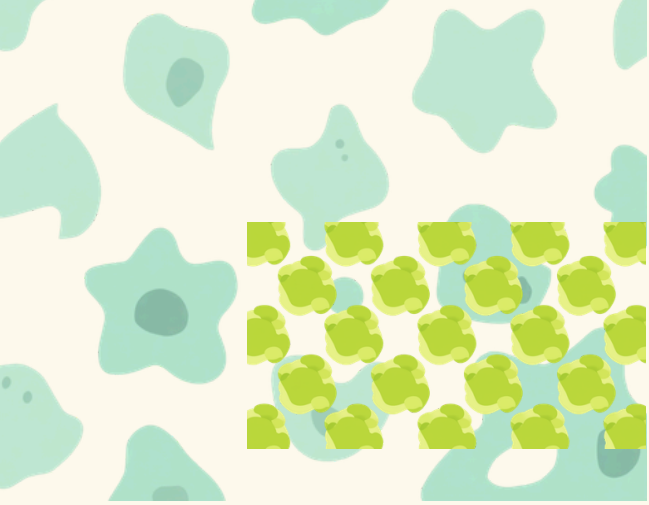

The tiny needle inside always points North to help us find direction!

What Do Magnets Attract?

- ✓ Iron – like safety pins and nails
- ✓ Steel – tiffin dabba lids
- ✓ Nickel – some jewelry and coins
- ✓ Cobalt – special metal tools
- ✗ NOT magnetic: aluminium, copper, gold

Magnetic vs Non-Magnetic Objects

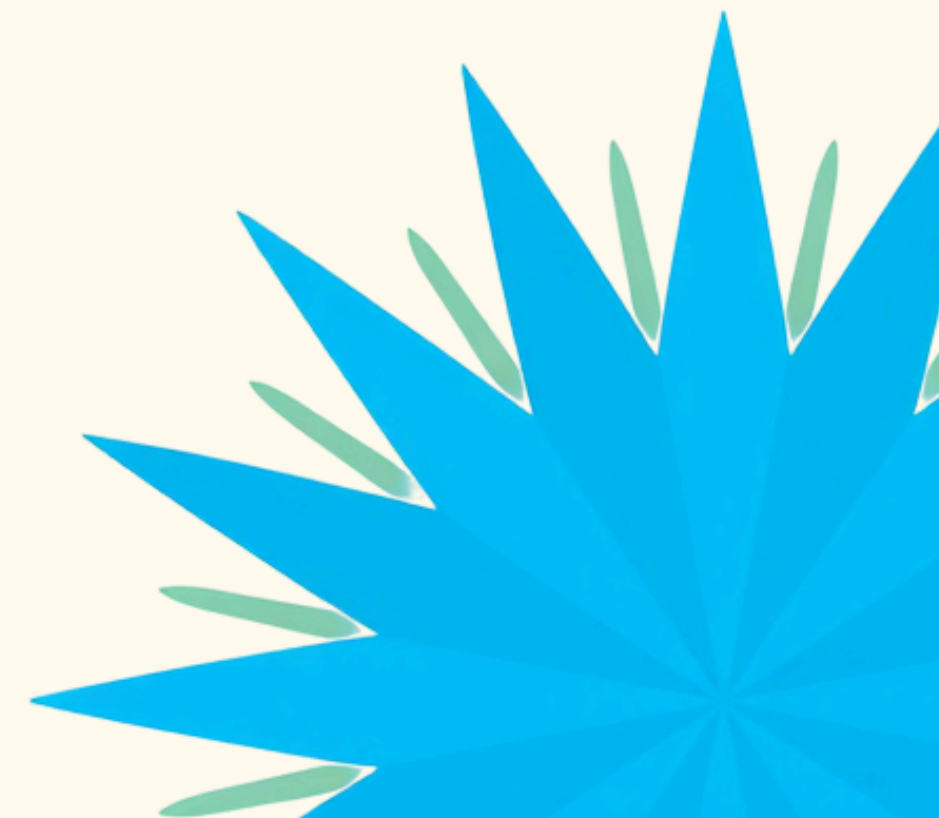

Let's sort objects into two groups - those that magnets can pull, and those they cannot!

MAGNETIC OBJECTS

- ✓ Pin
- ✓ Paper clip
- ✓ Steel scissors
- ✓ ₹5 coin

NON-MAGNETIC OBJECTS

- ✗ Paper sheet
- ✗ Rubber band
- ✗ Wooden pencil
- ✗ Eraser

Prediction Time!

Can you guess which objects a magnet will attract? Think carefully and make your predictions before we test!

Screwdriver Will it stick to a magnet?

My Guess:

Spoon Will it stick to a magnet?

My Guess:

Blanket Will it stick to a magnet?

My Guess:

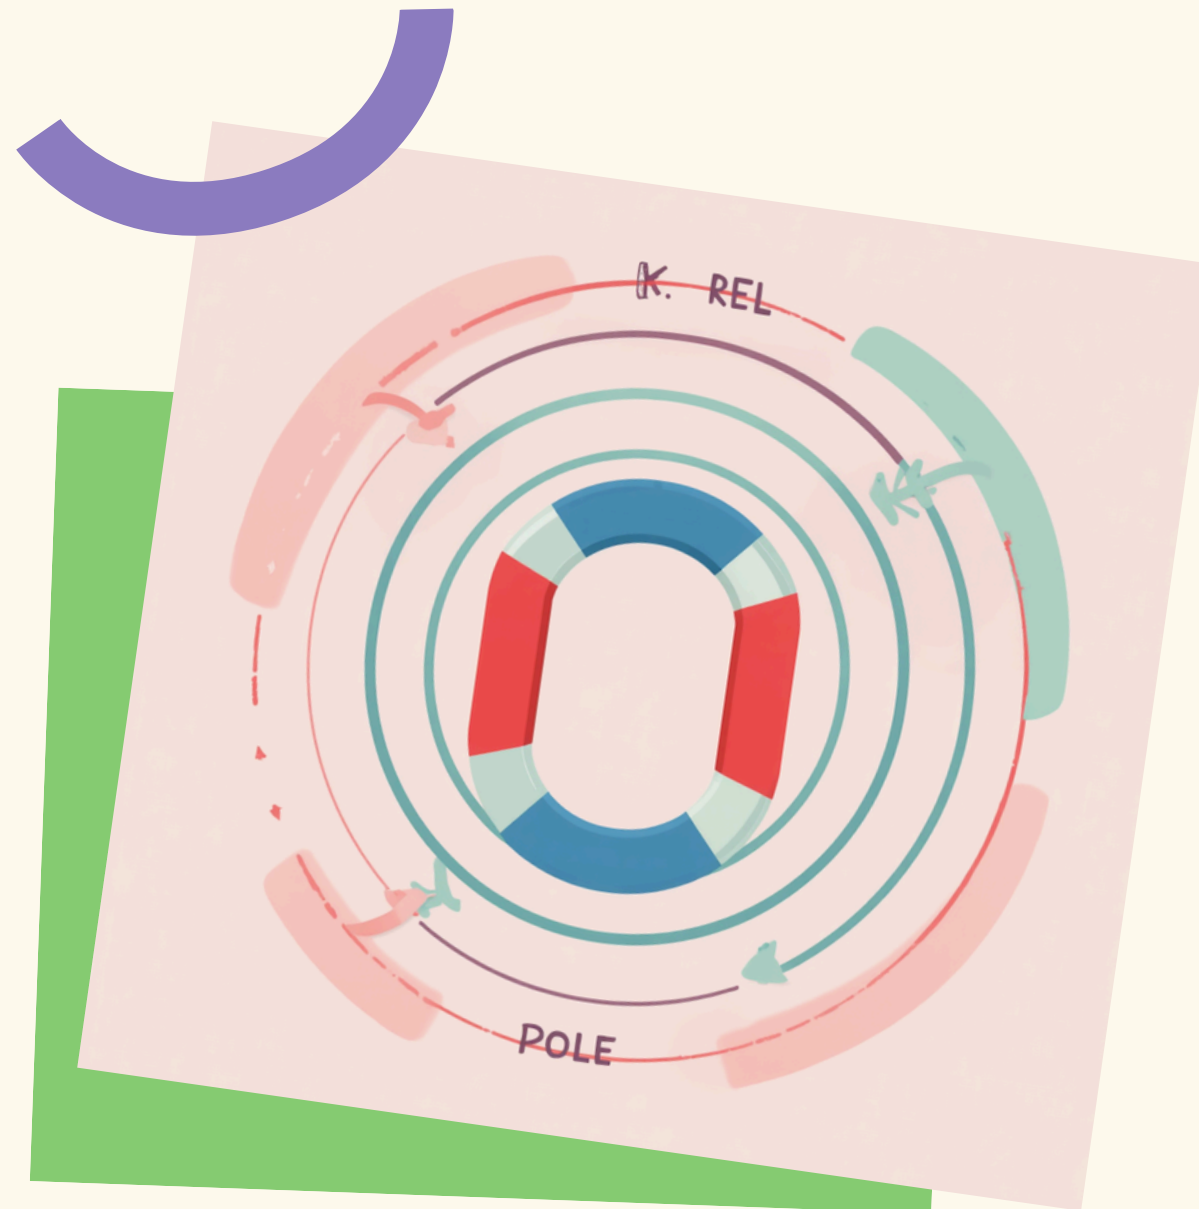

LET'S TEST OUR PREDICTIONS!

Watch carefully as the magnet pulls some objects closer! Notice which things stick and which don't move at all. Write down your observations like a real scientist!

Magnetic Poles

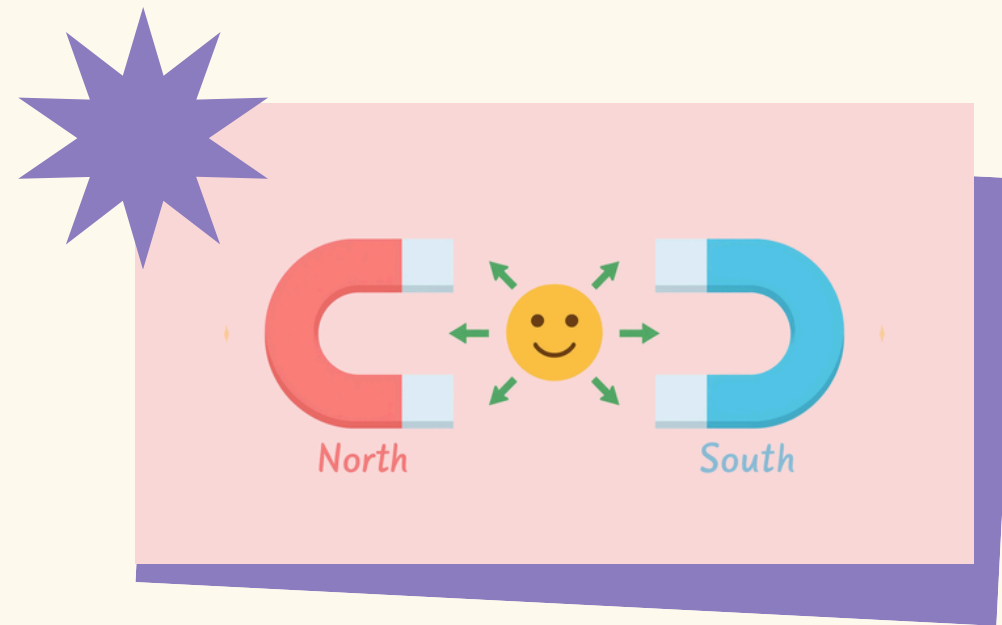

NORTH AND SOUTH

Every magnet has two ends called poles: North and South. Opposite poles attract, same poles repel!

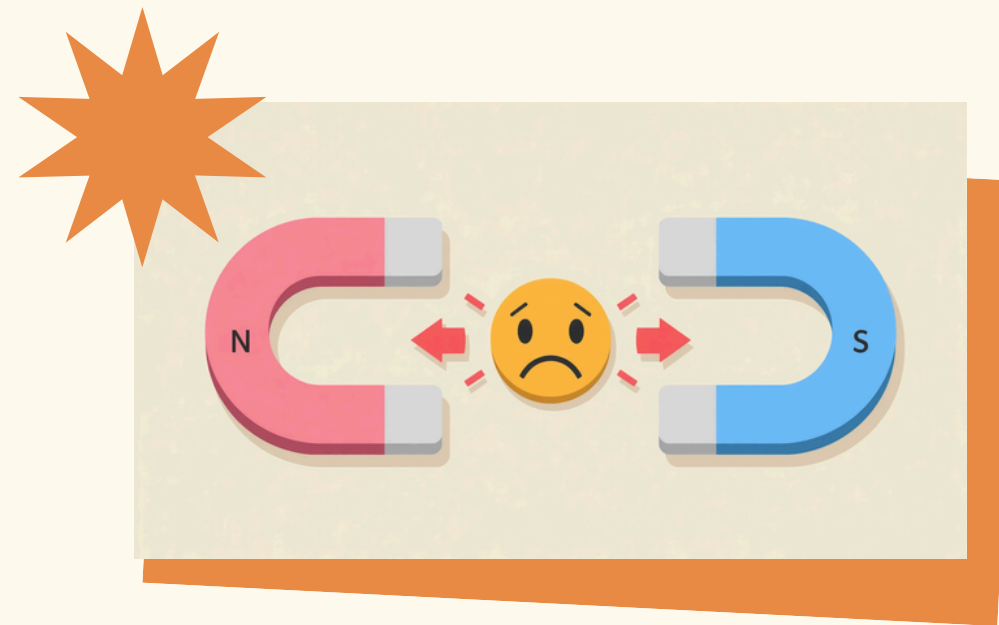

Poles in Action!

ATTRACT! 😊

When N meets S, they become best friends and pull together with a happy hug!

REPEL! 😡

When N meets N or S meets S, they push away like they're saying "No thank you!"

REMEMBER!

Remember: Opposite poles attract, same poles repel!

FRIDGE MAGNETS

Colorful magnets stick to your refrigerator door! They hold up drawings, notes, and photos for the whole family to see.

IRON PILLAR OF DELHI

This amazing 1,600-year-old iron pillar hasn't rusted! Scientists study its mysterious magnetic properties even today.

METRO TRAINS & COMPASS

Delhi and Mumbai Metro trains use magnetic brakes to stop safely. A compass uses magnets to show North direction!

Key Vocabulary

MAGNET

A special object that has an invisible magnetic force that can pull certain metals towards it.

ATTRACT & REPEL

Attract means to pull closer together. Repel means to push away from each other.

MAGNETIC & NON-MAGNETIC

Magnetic objects can be pulled by a magnet. Non-magnetic objects cannot be pulled by a magnet.

YOU ARE A MAGNET EXPLORER!

Wear your badge proudly. You are real scientists! You discovered the magic of magnets today!

Home Activity

Use your fridge magnet to test 5 kitchen items:

Steel spoon, plastic container, aluminium foil,
rubber gloves, safety pin.

Share what you find with your family!

Thank You, Magnet Explorers!

Get ready for our next exciting lesson with Science !
