

Light Up Your Name! – Sparkling Initials: My First Paper Circuit

Let's Get Started!

The Spark Hook

How does your name know it's time to shine? Look at this magical glowing nameplate and wonder!

Meet the Components

Battery Power (Coin Cell) – The Power House

LED – The Little Lamp

Copper Tape – The Magic Road

Electricity Flow — The Nala Story

Electricity flows like water in a pipe or "small water channel" ! If the pipe breaks, water stops. If the copper tape breaks, the light stops too!

🍏 coin cell

Positive & Negative — Two Friends

The battery has two sides like "Two Friends" — both friends must be invited to the party to light the lamp!

Step 6: Copper Tape — The Practitioner

Copper tape is the "Practitioner" — the magic path for electricity to travel! Like a smooth road helps cars move fast, this shiny tape helps power flow to light up your LED.

LED — The Little Diya

The LED is like a tiny traditional lamp! But instead of oil, it runs on magic battery power. When electricity flows through, it glows bright like a little diya!

Step 1: Write Your Initial

Draw your initial big and bold on your paper! Make it nice and large so everyone can see it shine. Think of the first letter of your name - like "A" for Arjun or "P" for Priya!

Tip: Use a thick marker and fill your whole paper!

Step 2: Lay the Copper Road

Stick the copper tape like a magic road around your letter. Press it down smoothly so the electricity can flow!

Step 3: Place the Battery Power House

Put the battery on the copper road –
This is your Power House! The coin
cell battery gives energy to make
your initial glow bright!

Step 4: The Magic Touch

Connect the LED legs to the copper tape ends. Watch carefully - one leg goes to each side of the tape. When both legs touch the copper road, your Small Diya will light up your initial!

Tip: "Hold the LED gently like a tiny flower!"

Troubleshooting — Why Is It Dim?

Check if the copper tape is broken or torn

Make sure battery touches tape on both sides

LED legs must touch copper tape properly — not loose or wobbly!

Celebration Time!

Shabaash! Your name is glowing like a star! You did it, little inventor!

Safety Reminder

This is a special battery, not a coin! Do NOT put it in your mouth or treat it like a Piggy bank coin. Always handle with care!

**Thank You & Keep
Shining!**
