

Number Detectives: My First Sudoku

A cartoon illustration of a young girl detective with dark skin and hair in pigtails, wearing a tan trench coat and a matching hat. She is holding a magnifying glass and standing in a park. In the background, there are colorful trees (pink, blue, green), a wooden bench, and a bright sun. A large speech bubble from her explains the concept of a grid. To her right is a 3x4 grid of colored squares, each containing a different fruit with a smiling face. The fruits are: Mango, Guava, Banana, and Papaya. The grid is made of smaller squares called 'Khali jagah'.

"It's like friends waiting
for their turn on the
swing!"

This is a Grid! A big square made
of smaller squares called Khali
jagah. Our 4 fruit friends - Mango,
Guava, Banana, and Papaya -
each need their own square!

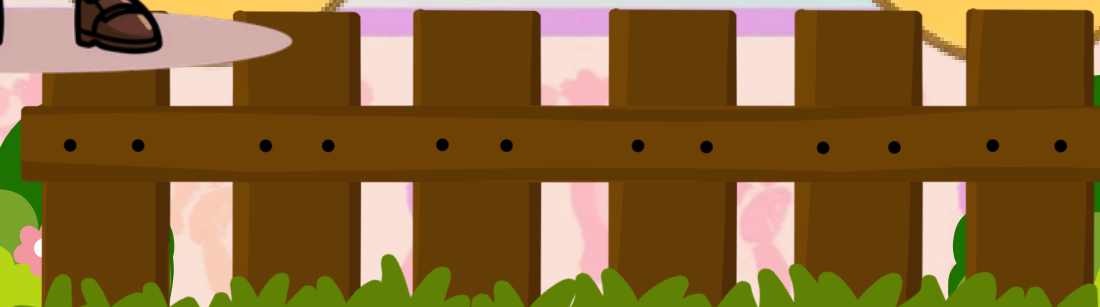

The One Rule: No Repeats!

"If Mango is here, no other Mango in this row! Right or Wrong?"

Be a Jasoos! Scan each row and column carefully.

"Wrong! I see two Mangoes. Let's fix it!"

Look at each row and column carefully. Where can our friend go?

"I scan each row like a Jasoos!" says Dira.

Can you spot the Empty space
Let's find where our missing friends belong!

Dira scanned the row carefully like a true Jasoos.
"Hmm, I see Mango, Guava, and Banana here... but
wait! Who is missing?" She looked again. "Papaya!
Papaya goes in the Empty space !"

Scan..

Check!

Found!

The Block Challenge: 2x2 Boxes
Look at the small squares inside our big grid.
Each 2x2 block must have all 4 friends - no
repeating!

"Each little box is like a small
stall in the bazaar - no repeats
allowed inside!"

Look at this 2x2 block from our puzzle!
Can you spot who is missing? We have
Mango, Guava, and Banana... but wait!
One friend is not here. Who could it be?
Use your detective skills to find out!

Wrap-Up: You Are a Number Detective!

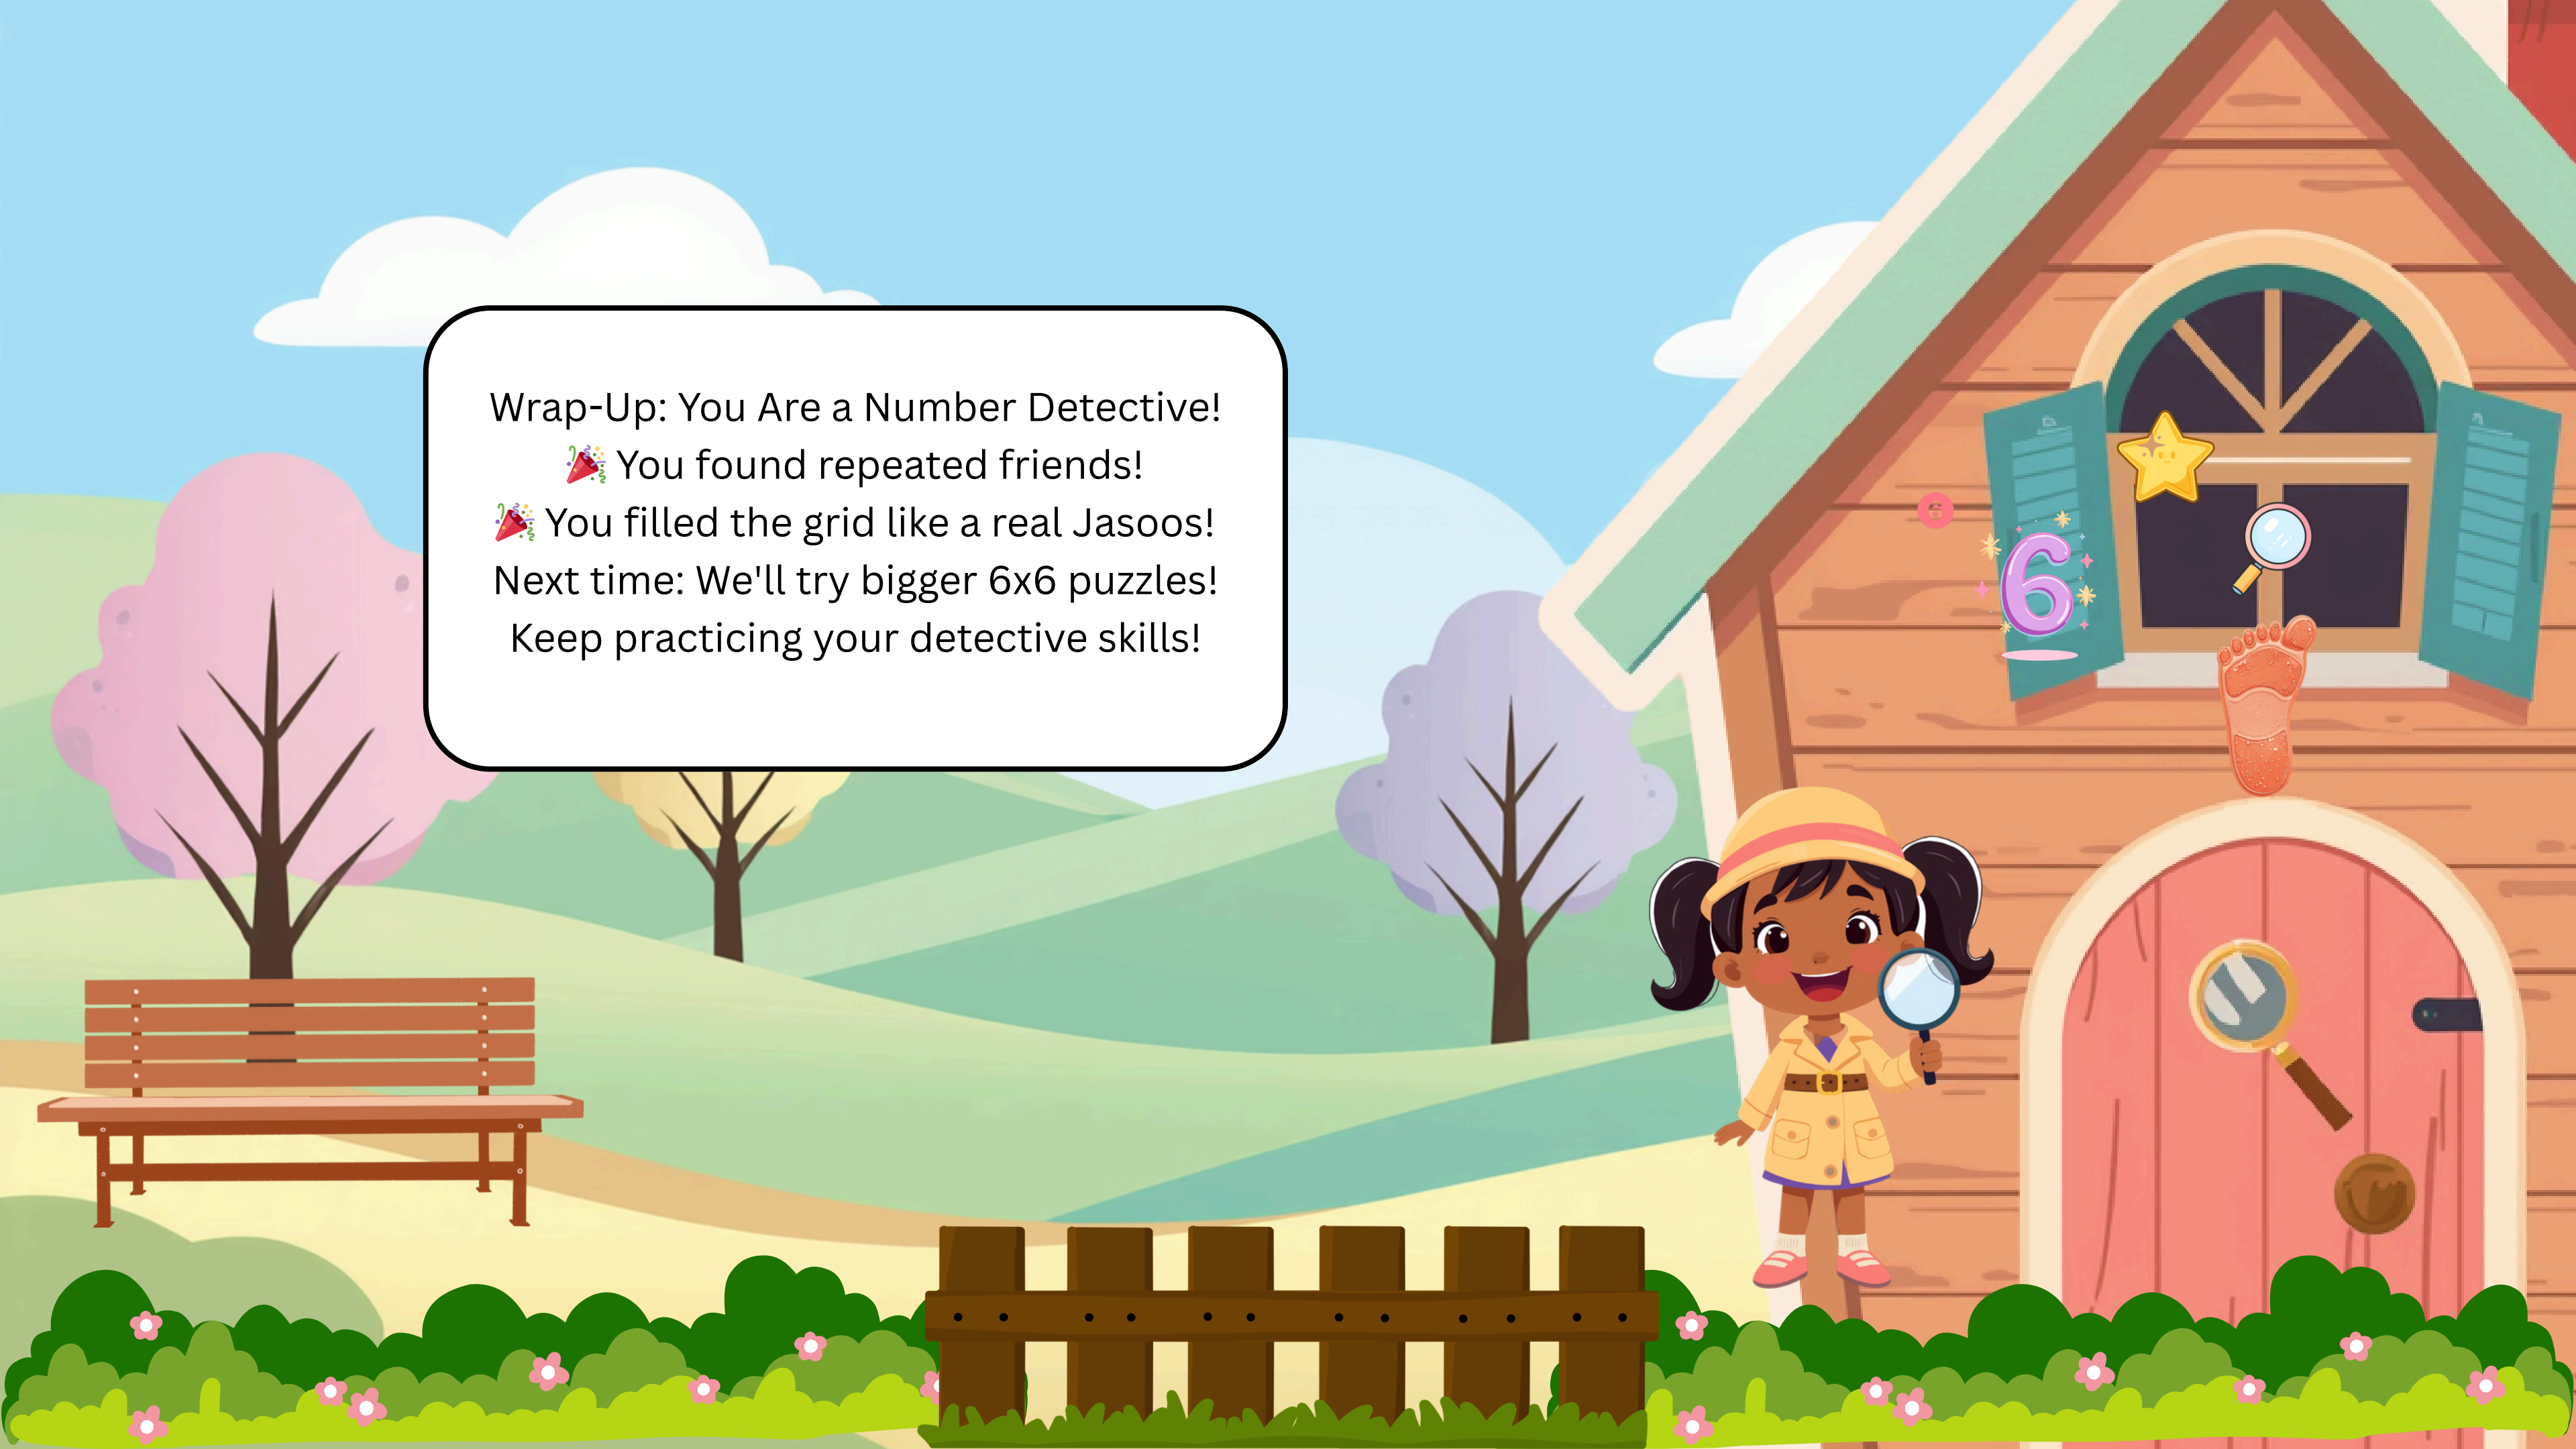

You found repeated friends!

You filled the grid like a real Jasoos!

Next time: We'll try bigger 6x6 puzzles!

Keep practicing your detective skills!

Thank You, Number Detectives!

"Keep practicing your detective skills! Ask questions, solve more puzzles, and become a Sudoku master!"
