

CODE YOUR OWN QUIZ GAME!

Building My First Mini Game in Scratch 

An Interactive Coding Adventure for Kids! ✨

The Magic Coding Puppet Show! 🤖🎭

Have you ever seen an exciting Ramlila puppet show or a festive street play?
Let's explore Scratch coding together!

Inside the Scratch computer playground, we organize our digital theatre using three simple parts:

The Sprites

These are the friendly characters and actors on your screen! They can talk, move, and dance!

The Stage

This is the painted backdrop background! It can be a deep dark jungle, a castle fort, or a schoolroom room!

Block Code

These are the color instructions you snap together to tell your actors exactly what to do next!

Coding is Like Making Mango Lassi! 🥭

When you make a sweet, chilled cup of Mango Lassi with your family, you must follow the steps in the perfect order! Let's see how sequence works:

- 1 **Add the Curd:** First, spoon fresh white curd into your kitchen blender bowl.
- 2 **Add the Mango:** Next, pour in delicious, sweet golden mango pulp nectar.
- 3 **Mix it Up:** Finally, turn on the blender machine to mix it all together nicely!

Order Matters! ↺

What if you try to blend empty air before putting in the mango chunks? It wouldn't work! Computer coding follows the exact same rule. This is called a **Sequence**—following action steps in the correct order!

Your Magical Color Brick Box! 🎨

Scratch instructions live inside a digital box, just like colorful plastic Lego bricks! Each instruction color handles a different job:

Events

The Yellow Green-Flag Bricks! 🚩

These are the **START** buttons. They tell your characters, "Wake up, our game is beginning right now!"

Looks

The Purple Speaking Bricks! 💬

These blocks create speech bubbles so your character sprite can talk, say hello, or share text words!

Sensing

The Light Blue Question Bricks! ❓

These are the listening blocks. They ask a question and wait for the player to type an answer on their keyboard!

Step 1: Choose Your Actor & Stage!

Let's start building our mini quiz game from the very beginning. Follow these setup steps:

- 1 Pick Your Sprite Actor:** Click the puppy icon button to choose an actor character sprite. You can select a cute animal, a dancing star, or an imaginary creature!
- 2 Pick Your Backdrop Stage:** Look at the bottom-right corner window and click the landscape button. Choose a beautiful backdrop, like an ancient Indian fort wall background!

[Your Chosen Character Sprite] stands proudly inside [Your Fort Stage Background]!

Step 2: Greet Your Game Players! 🖐️

Let's teach our actor character sprite how to talk and welcome people to our game station panel:

- 1 Go to the yellow instruction shelf box and drag out the curved **when green flag clicked** block. Drop it onto your code layout space!
- 2 Go to the purple instruction shelf box and find the rectangular **say [Hello!] for 2 secs** brick slot. Snap it directly underneath the yellow start block!
- 3 Click inside the text word bubble box slot and change the message text to say: **"Welcome to my Quiz! Let's play!"**

 [Your Character Sprite] says: "Welcome to my Quiz! Let's play!"

Step 3: Ask a Rainy Day Question!

Now it's time to test our players' brains with a real mystery riddle question, just like asking your family what's for dinner!

The Sensing Action: Open up your light blue instruction box shelf. Drag out the question block piece that reads: **ask [What's your name?] and wait** .

Type Your Mystery Question: Change the text question string inside the white input slot box to read exactly: "**Which beautiful bird dances when it rains in India?**"

? Game Screen displays typing prompt: "Which beautiful bird dances when it rains in India?"

Step 4: Celebrate with a Loud Cheer! 🎉

When players type the correct answer (**Peacock**), our character sprite actor throws a joyful, giggly celebration party!

Let's string together our congratulatory speech bubble commands in a perfect sequence block track line:

- Snap a purple block saying: **say [Wah! Shabash!] for 2 secs** .
- Snap an orange timer control block underneath: **wait 1 seconds** .
- Finish up by snapping a final proud bubble saying: **say [You are amazing!] for 2 secs** .

Pop Quiz Time!

What color are the Scratch instruction blocks that let your sprite character talk and display speech word bubbles?

(A) Neon Yellow Blocks 

Hint: Yellow blocks are for Events like the green flag start button, not talking words!

(B) Bright Purple Looks Blocks! 

Bingo! Purple Looks blocks give your characters their speaking voices! 

(C) Light Blue Blocks 

Hint: Light blue blocks handle sensing and asking keyboard questions!

Make It Your Own! 🎨

Now that your base quiz loop works beautifully, use these fun ideas to modify your project game:

- 🧩 **Add Question 2:** Ask players to choose between *Ladoo* or *Jalebi* sweets!
- 🔔 **Add Sound Effects:** Program a sharp bicycle bell sound when keys are typed!
- 🌈 **Mix Colors:** Tweak costumes and switch actor frames to show a dancing monkey!

Junior Game Developer!

Fantastic job! You followed the steps in perfect sequence, coded your very first functional Scratch Quiz game, and earned your official creator badge today! Keep on inventing! 🚀
