

Maths: Angles

Measuring with a Protractor

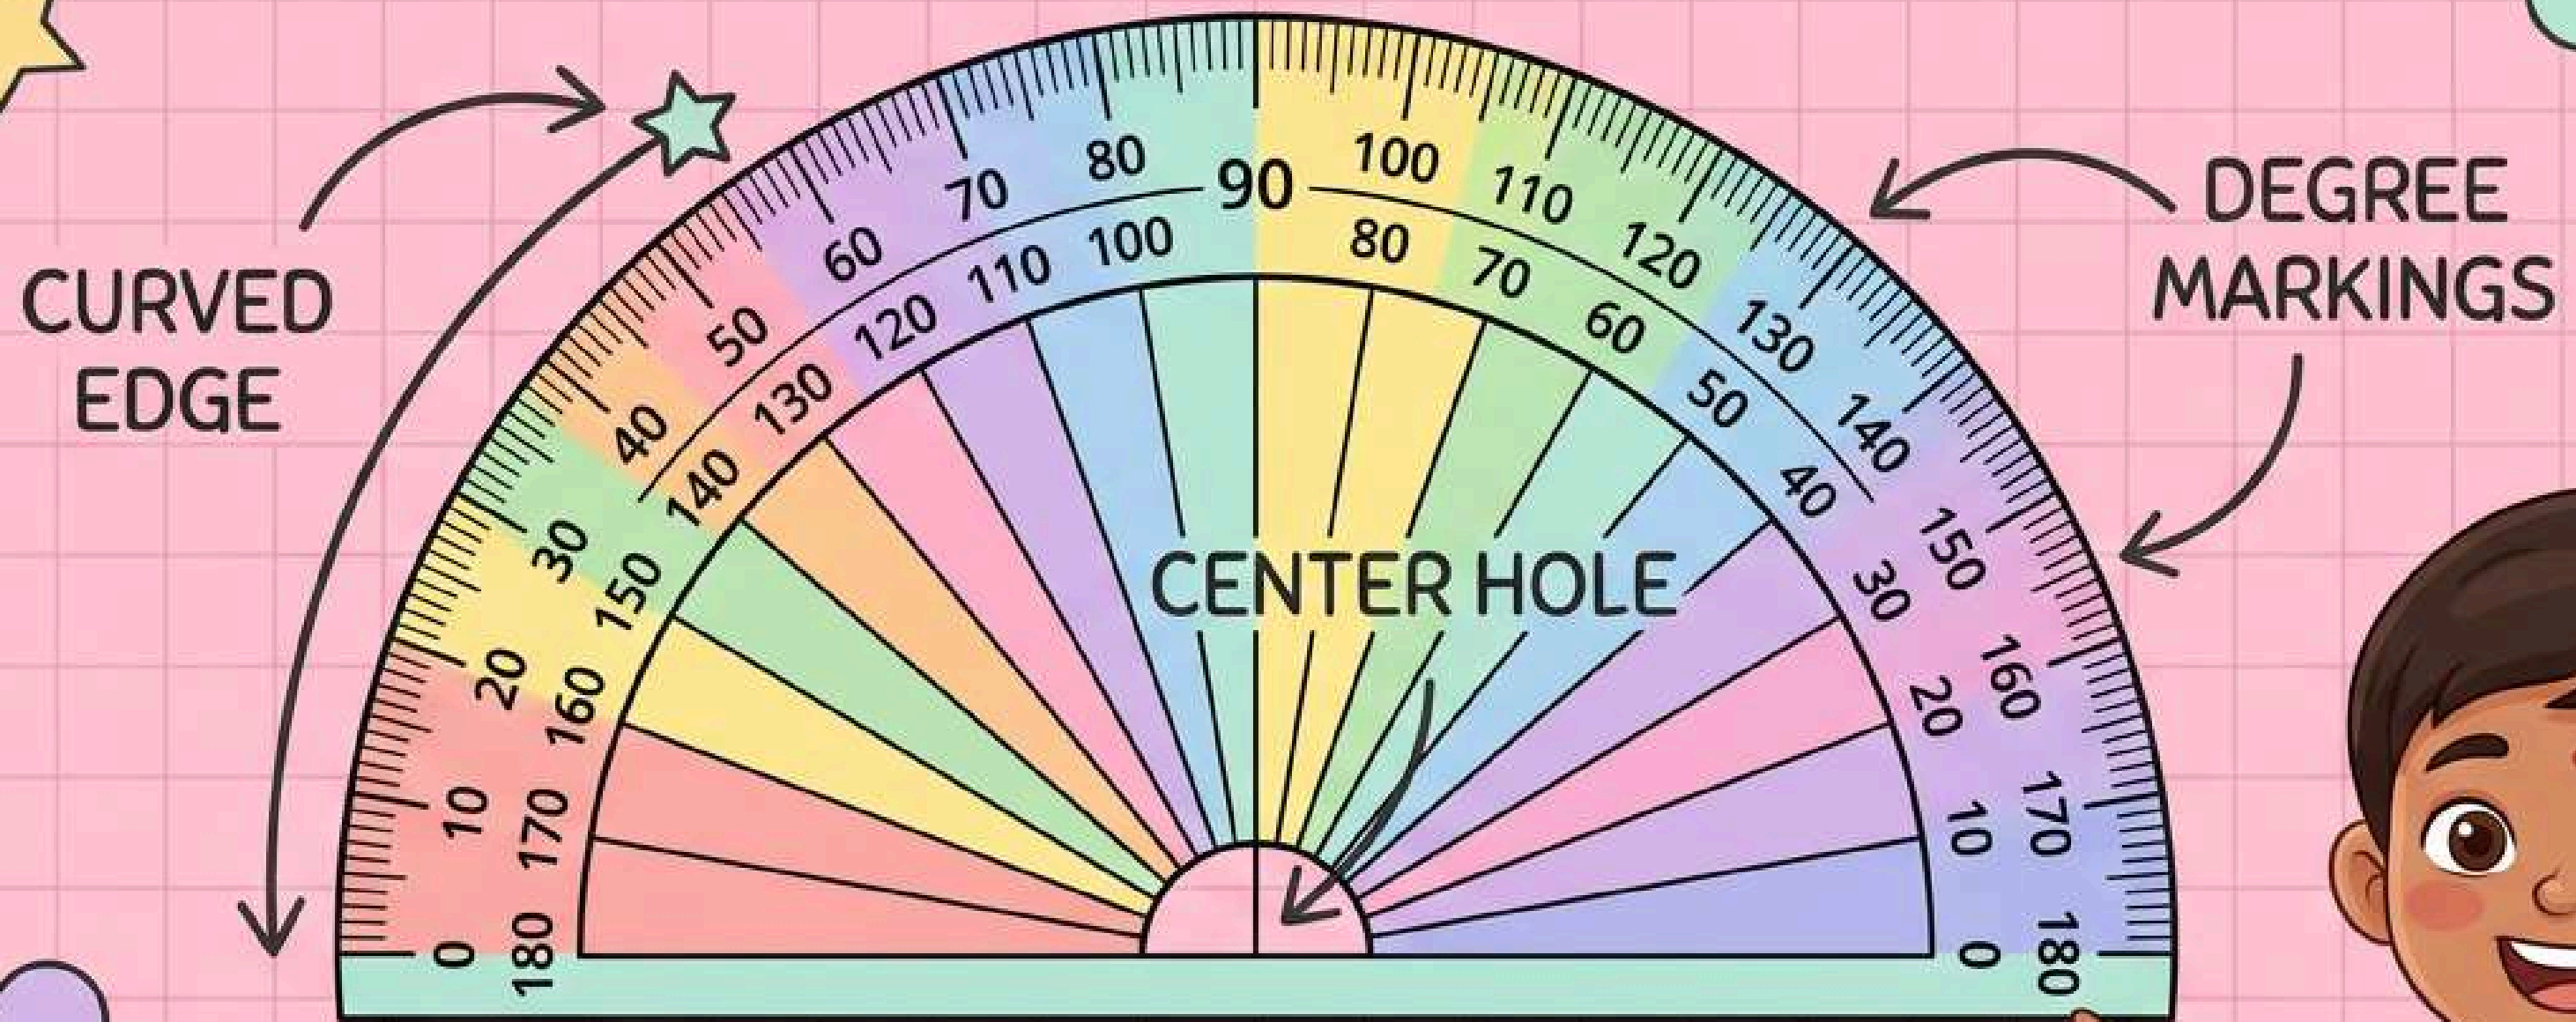

What Are Angles?

An angle is the space between two lines that meet at a point.

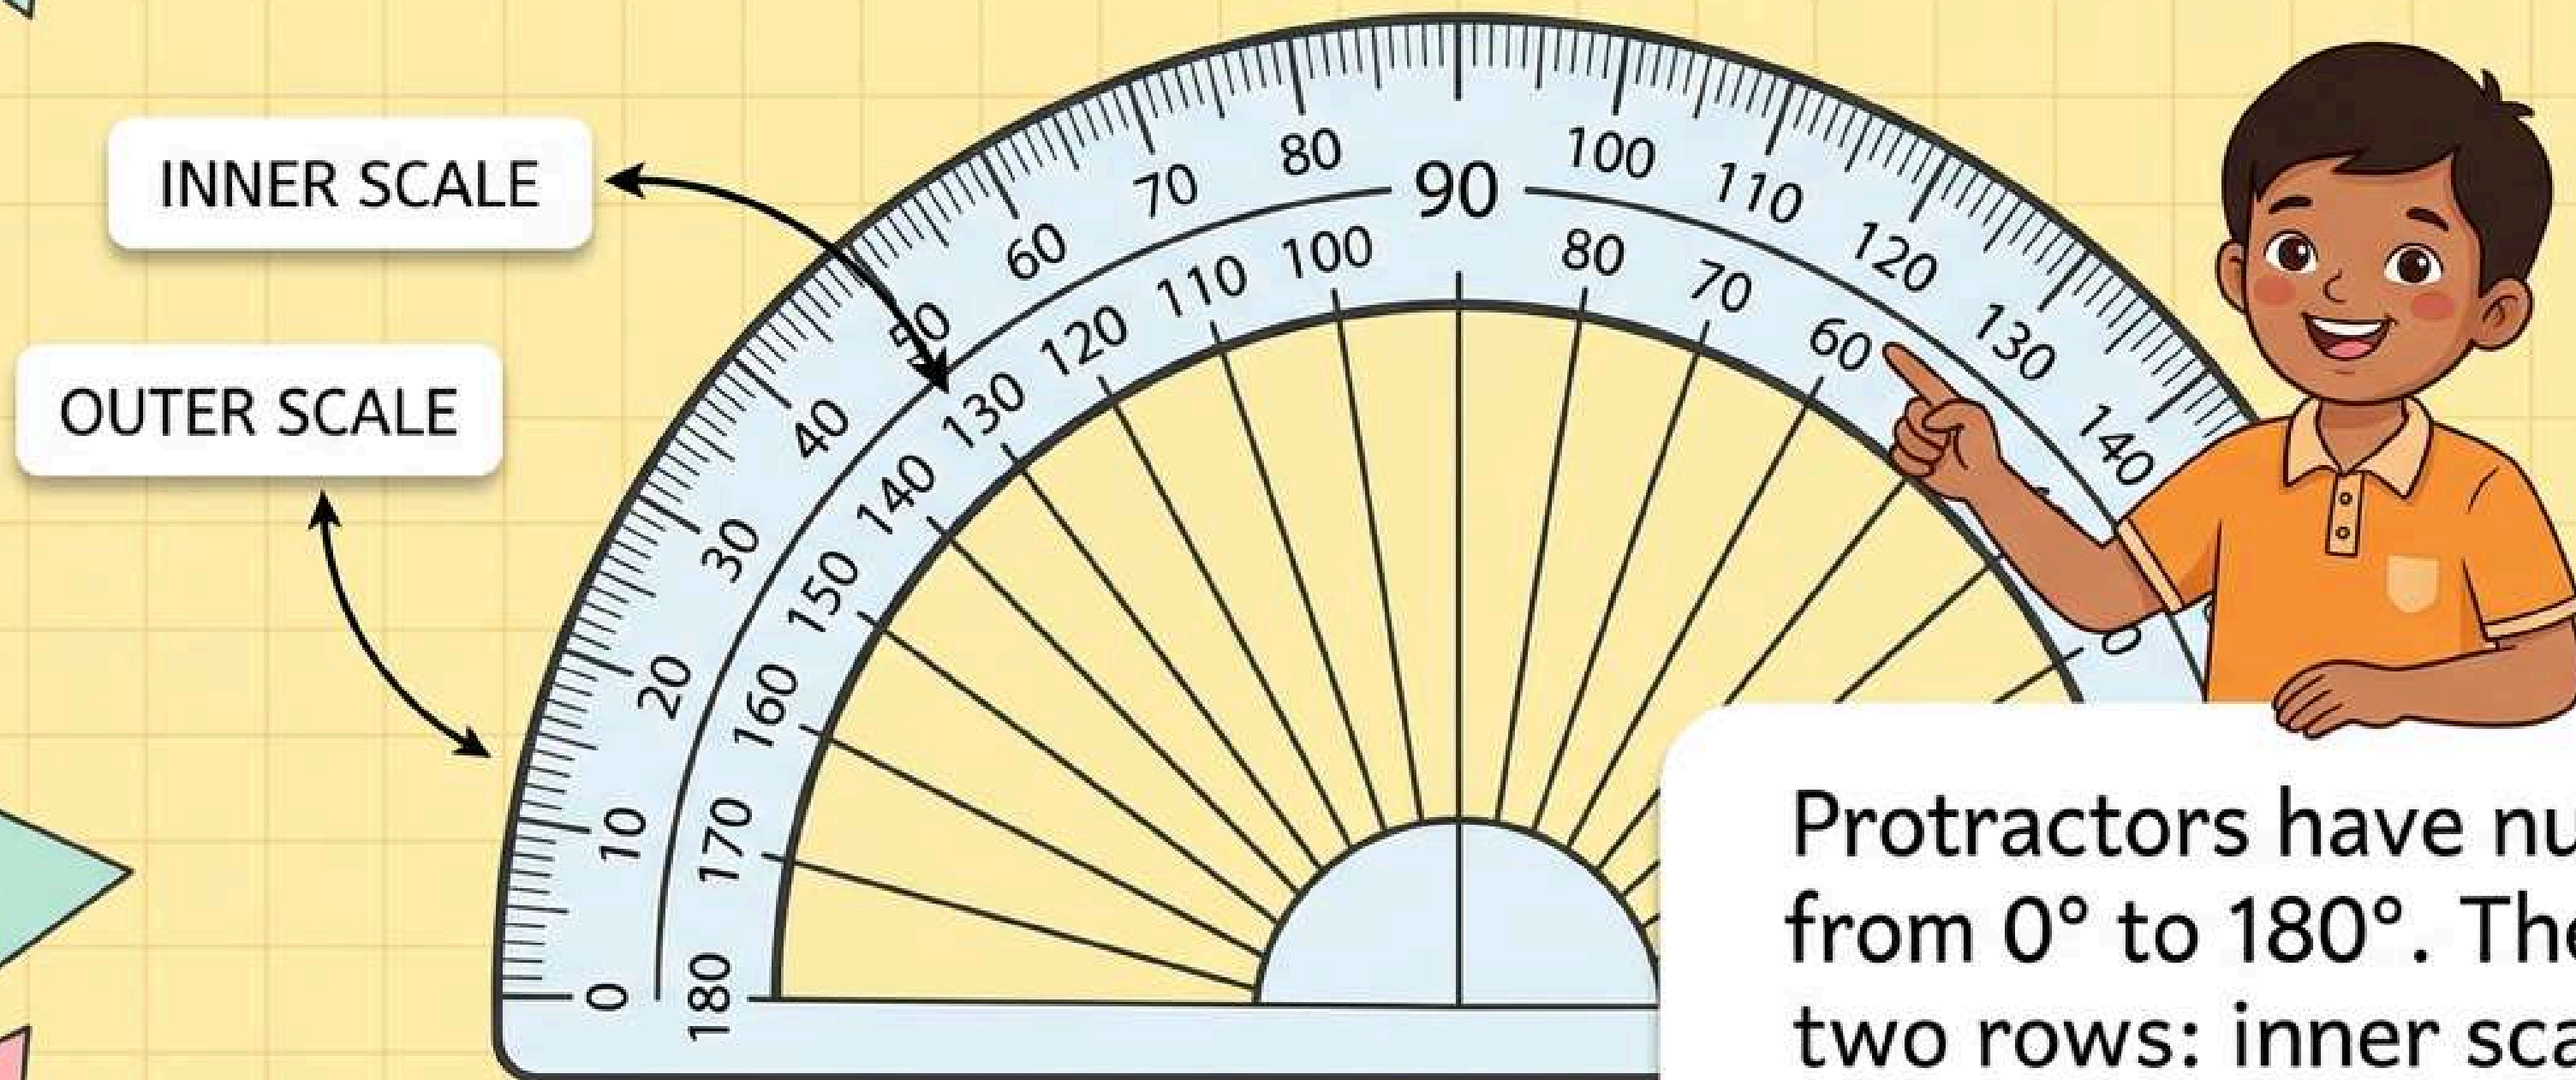

Meet the Protractor

A protractor helps us measure angles in degrees.

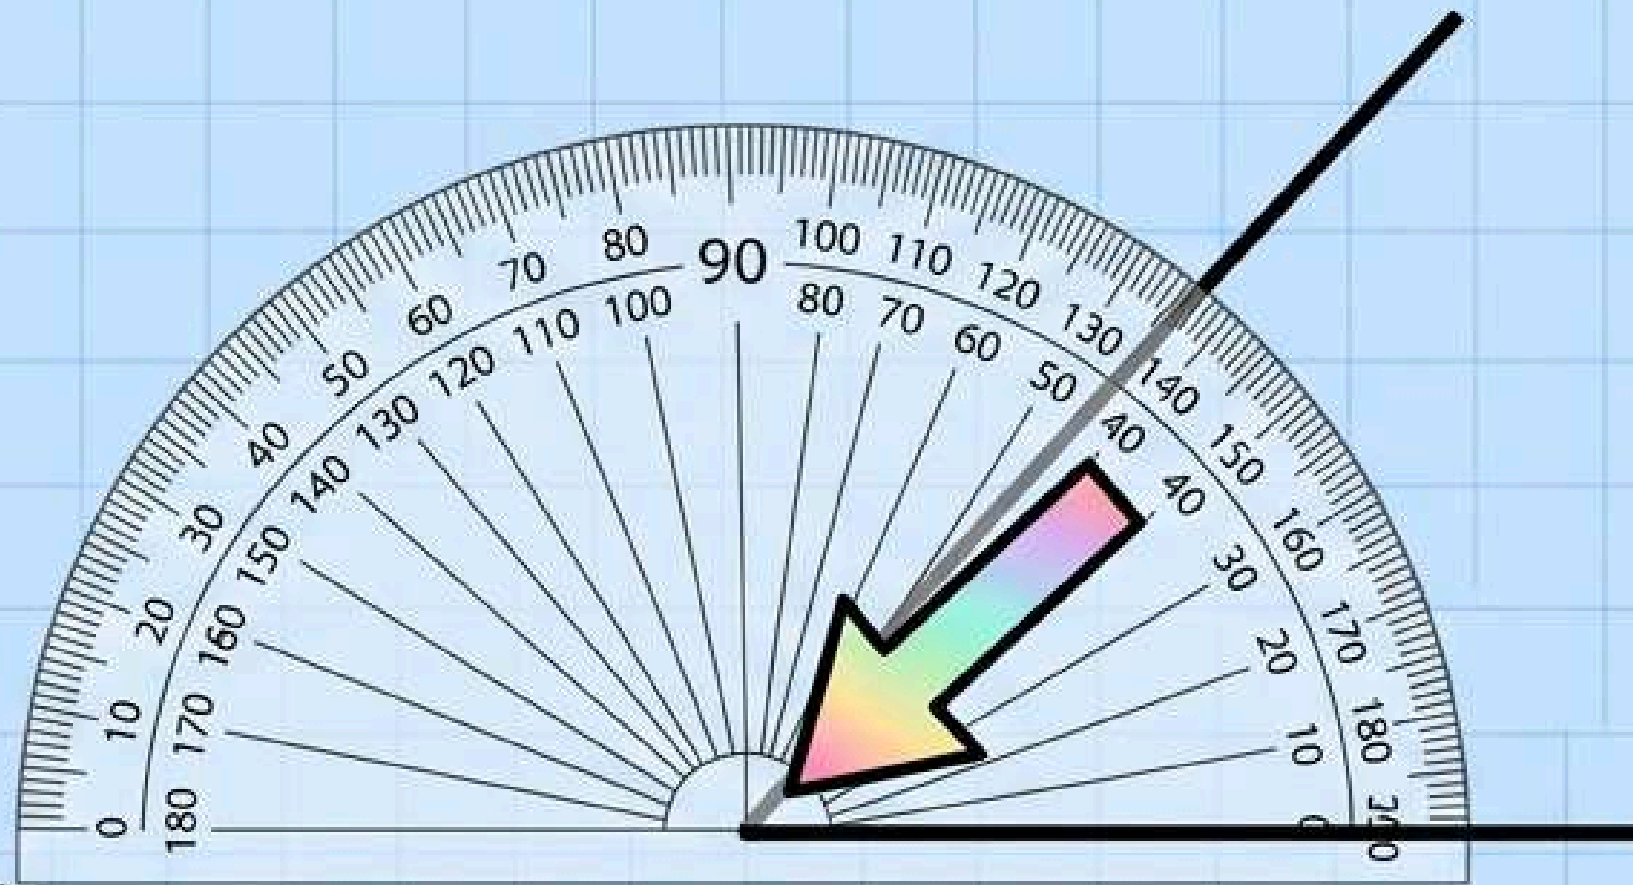

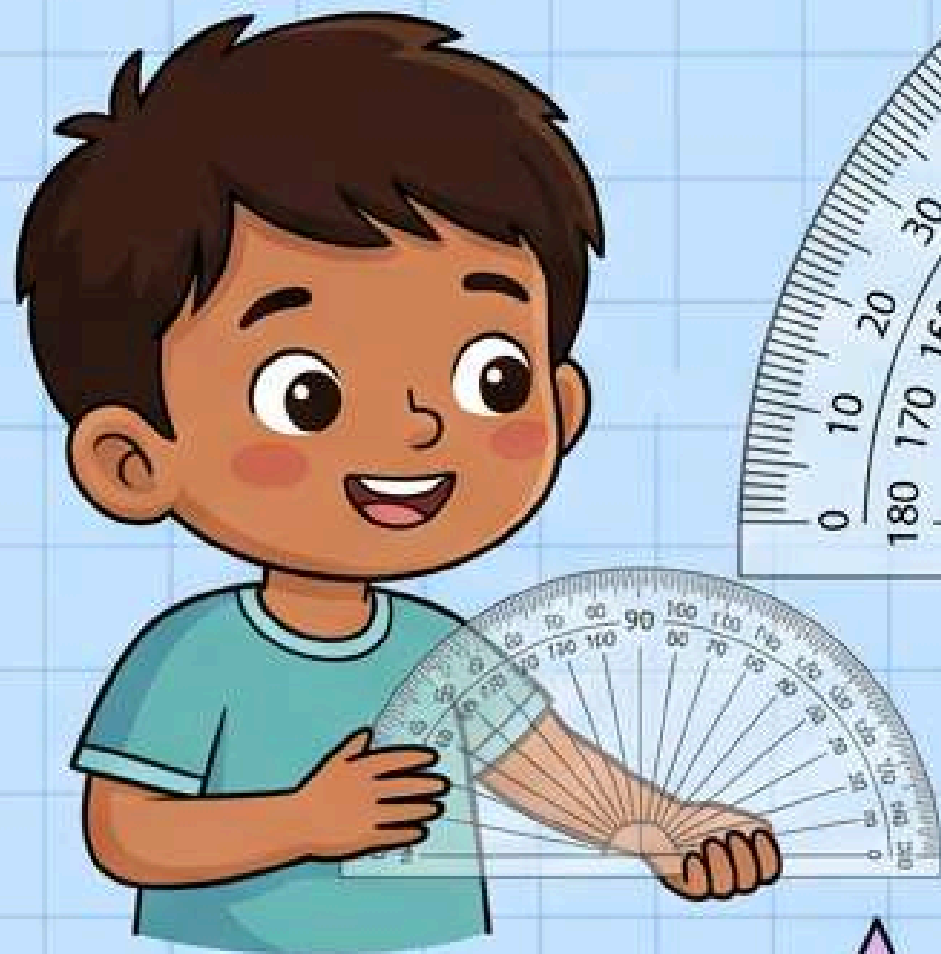

The Protractor Scale

Protractors have numbers from 0° to 180° . There are two rows: inner scale and outer scale.

Step 1 – Place the Protractor

1

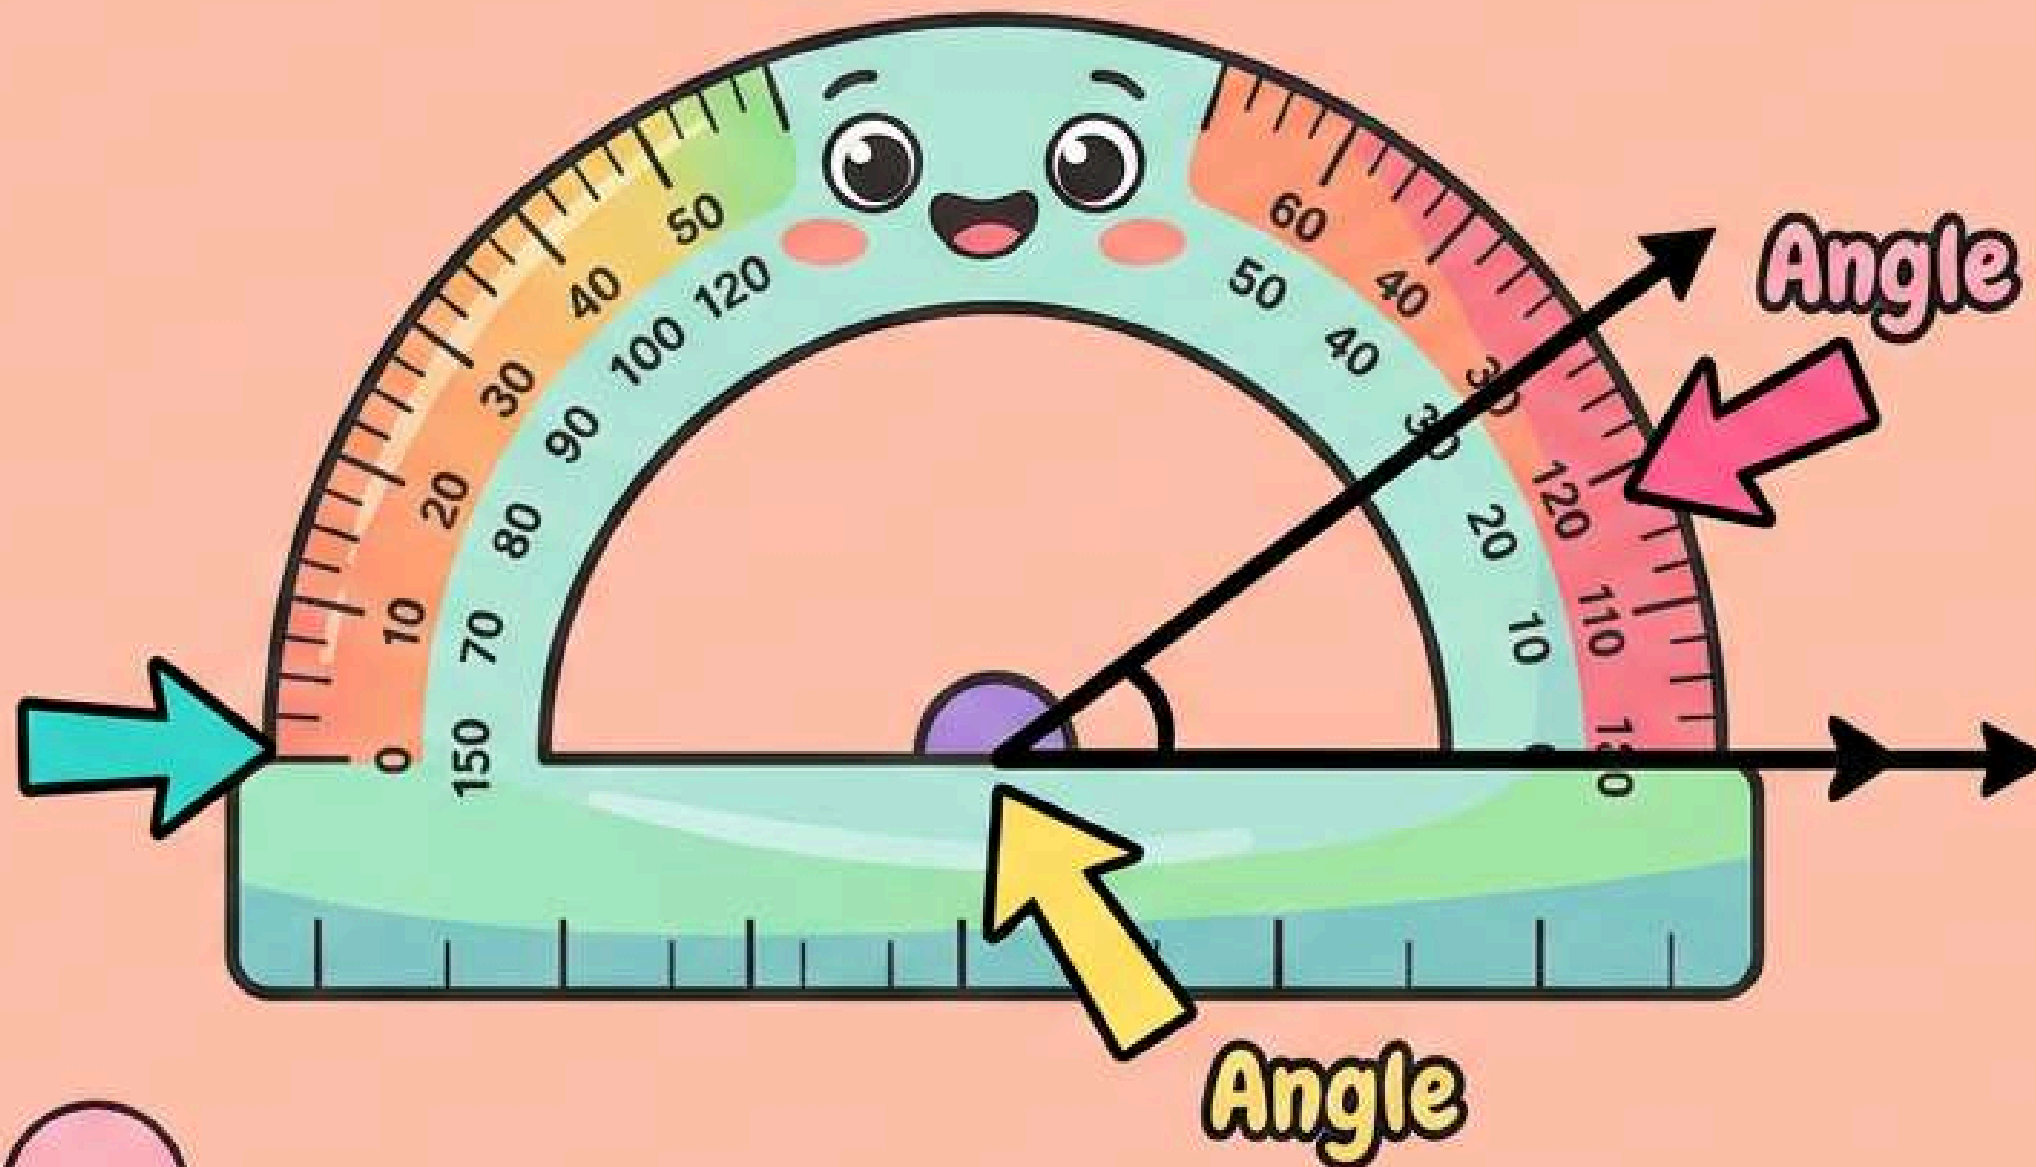

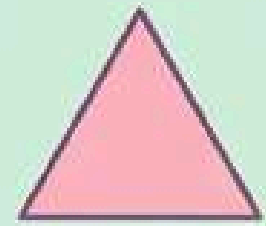

Place the center hole exactly on the vertex — the point where two lines meet.

Step 2 – Align the Baseline

2

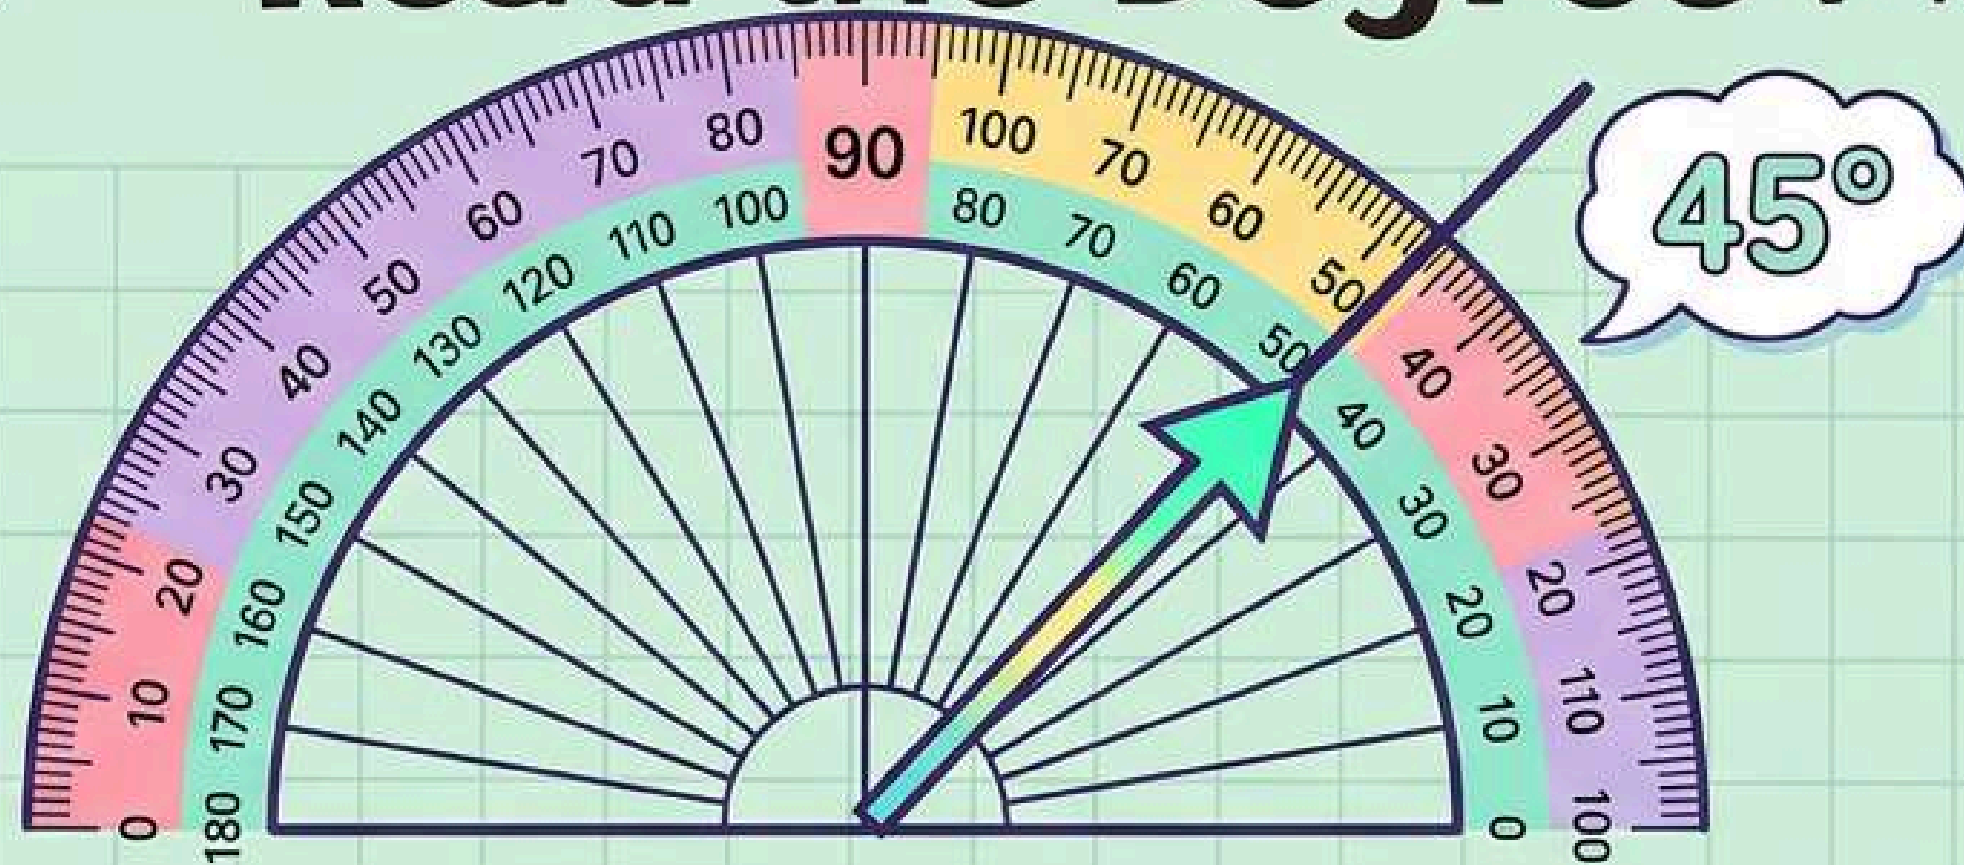

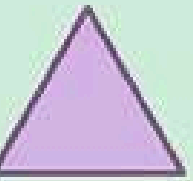

Line up one side of the angle with the zero line on the protractor.

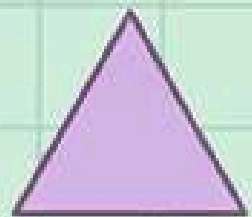

Step 3 – Read the Degree Mark

Step 3 – Read the Degree Mark

3

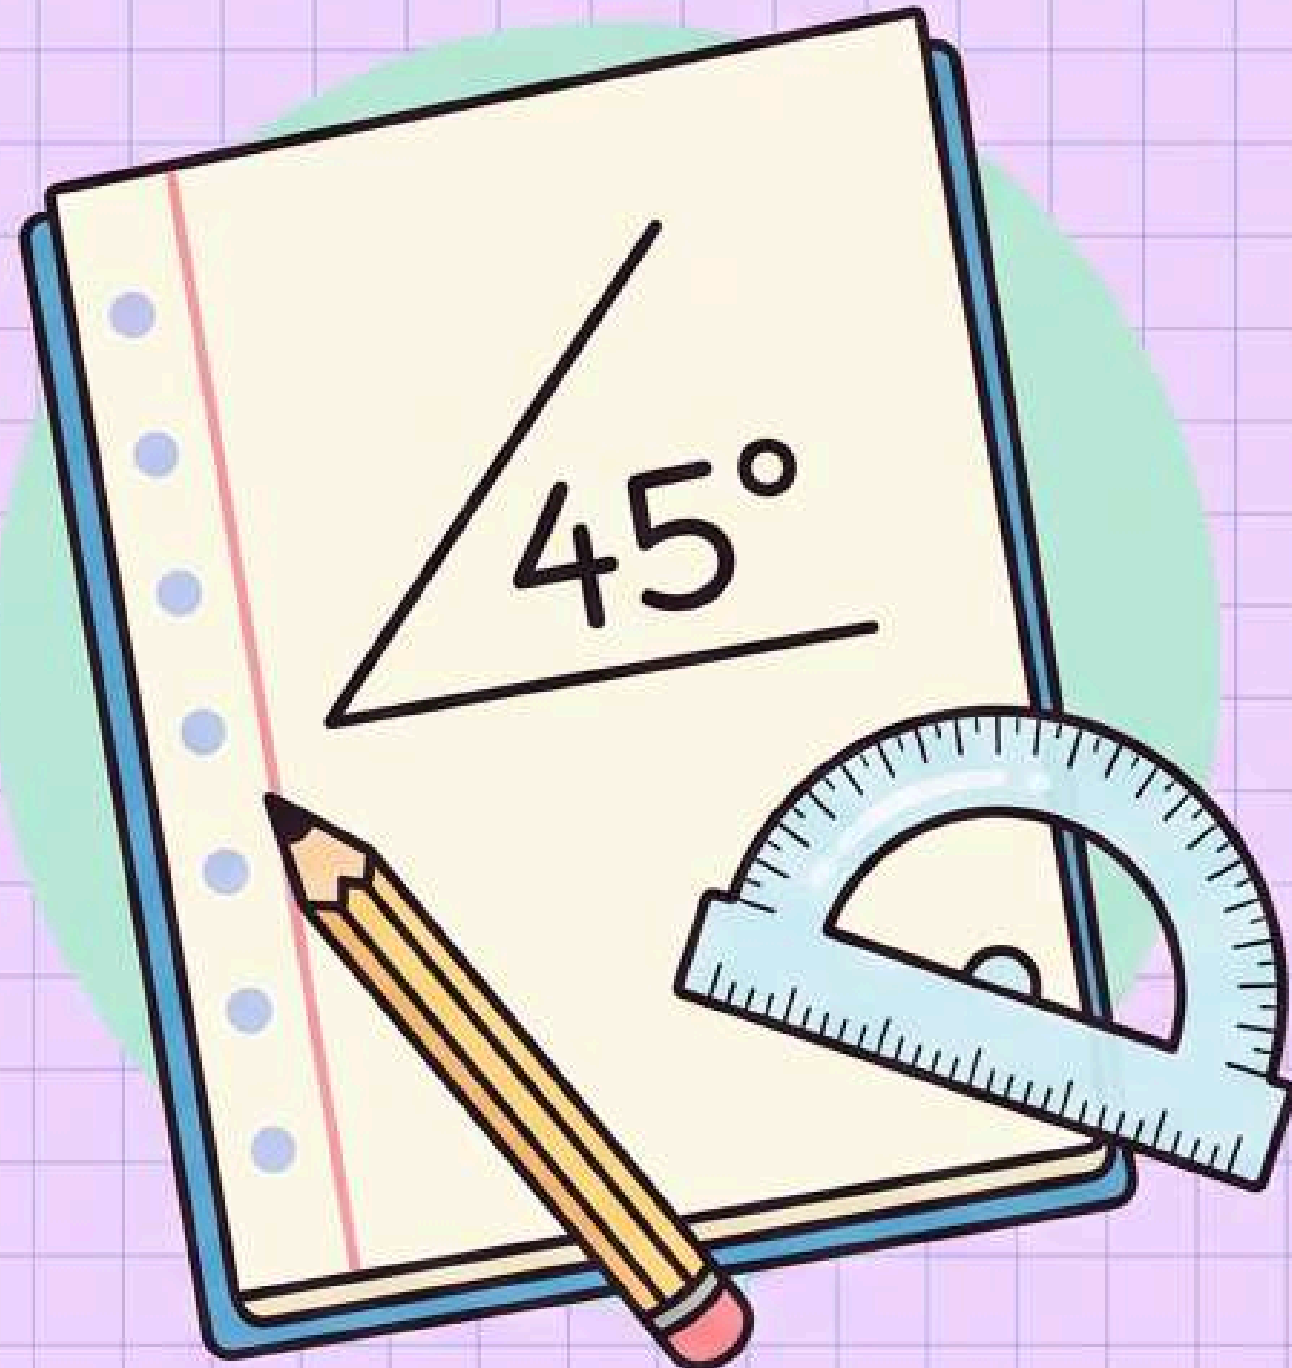

Look where the other side of the angle crosses the number scale. That number is your **angle**!

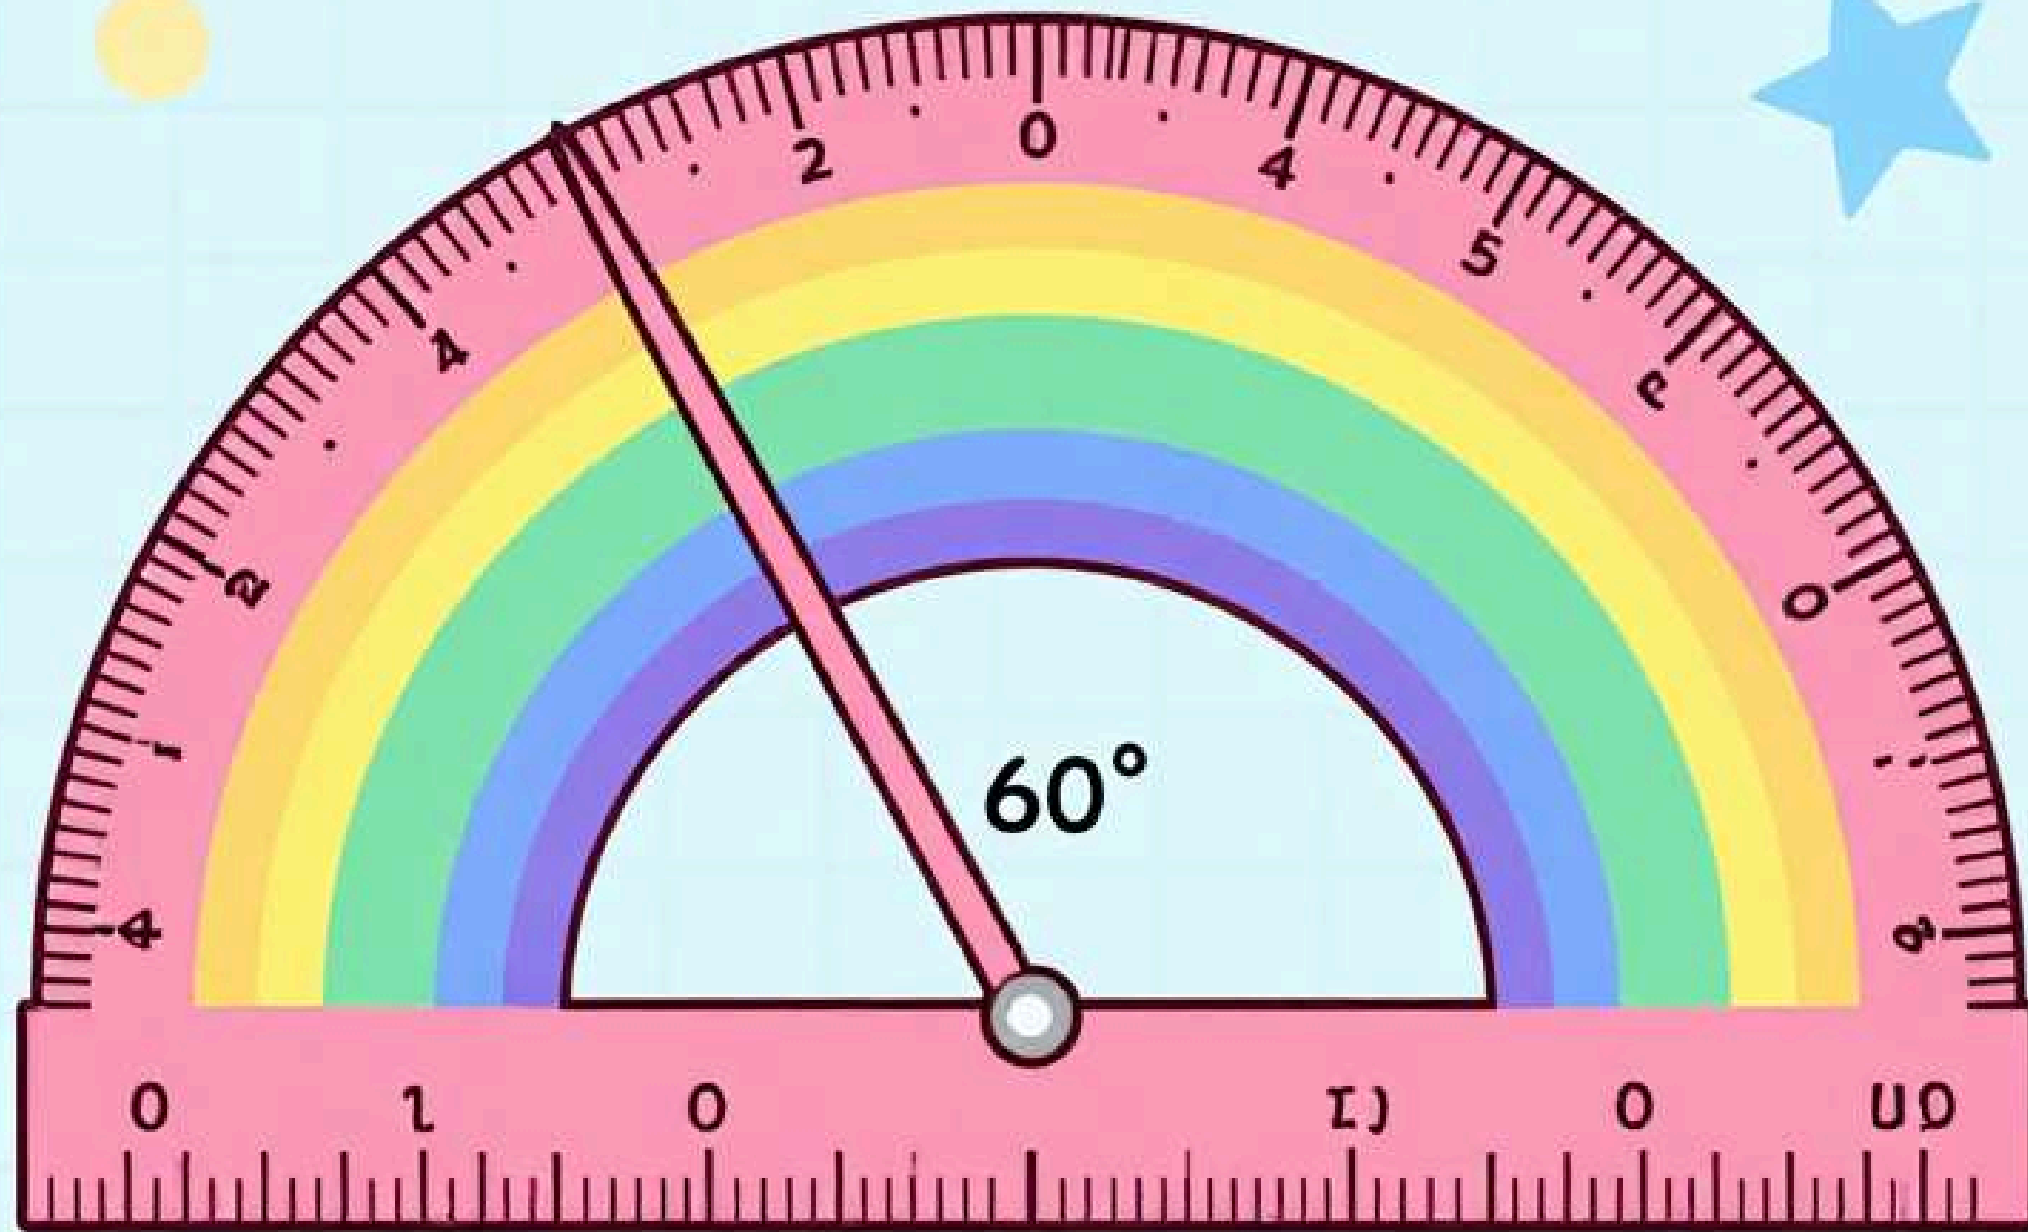

Step 4 – Write It Down

4

Record the number of degrees the angle measures.
Always include the degree symbol $^{\circ}$.

Practice Example 1

What is the size of this angle?

- A) 30°
- B) 60°
- C) 90°

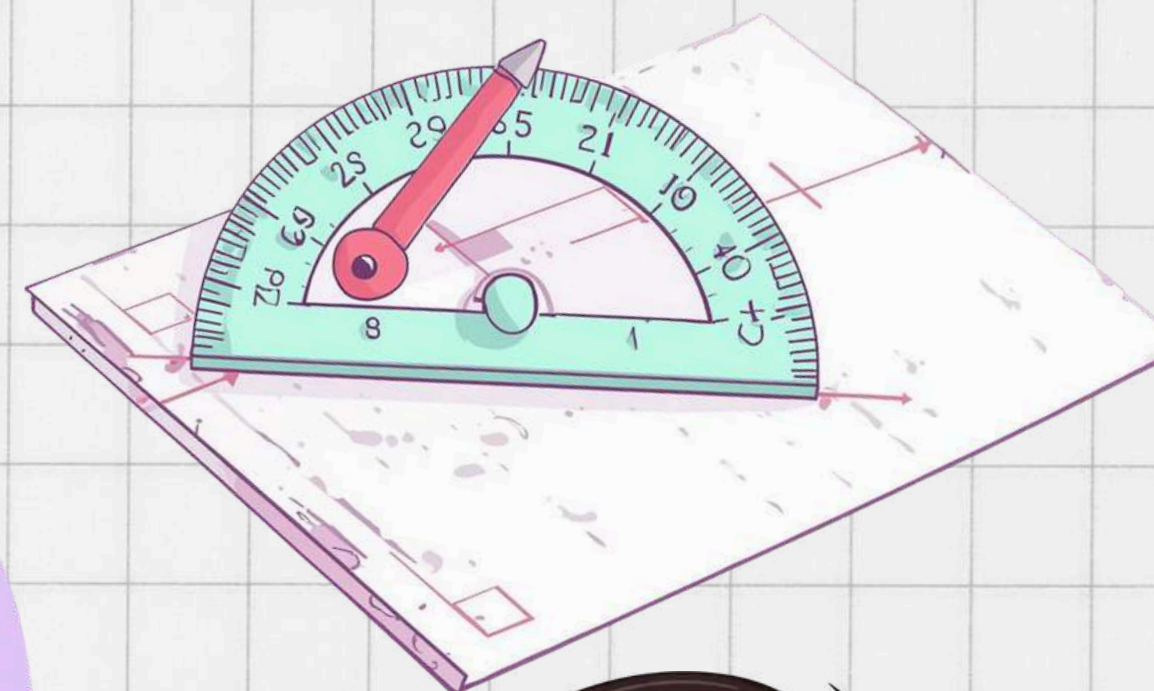

Practice Example 2

Measure this angle and choose the right answer!

- A) 75°
- B) 100°
- C) 120°

Practice Example 3

The protractor is placed on the angle. What step should you do next?

- A) Place protractor center
- B) Align baseline with zero
- C) Read the scale

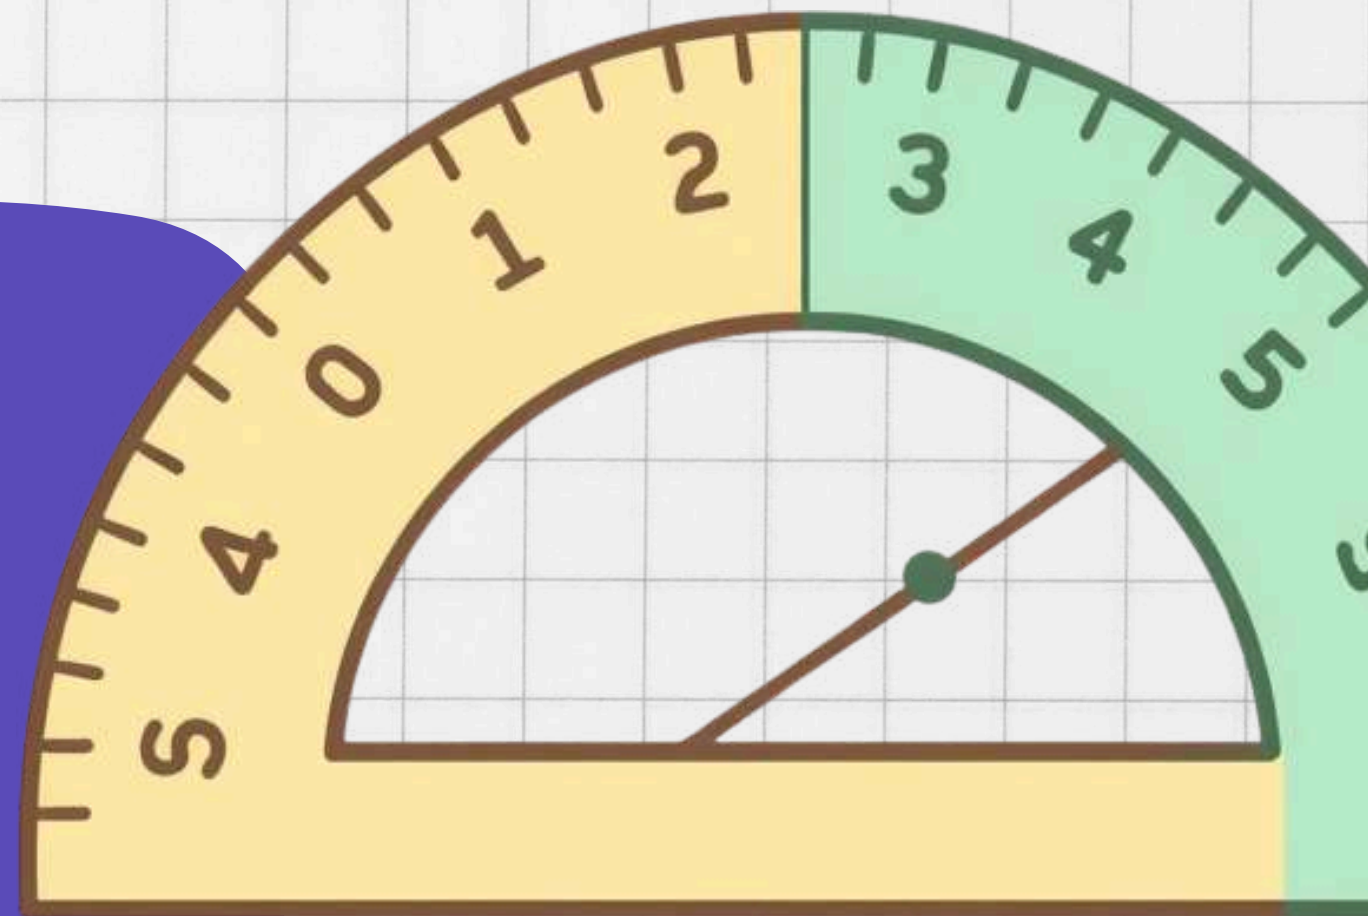

Common Mistakes to Avoid

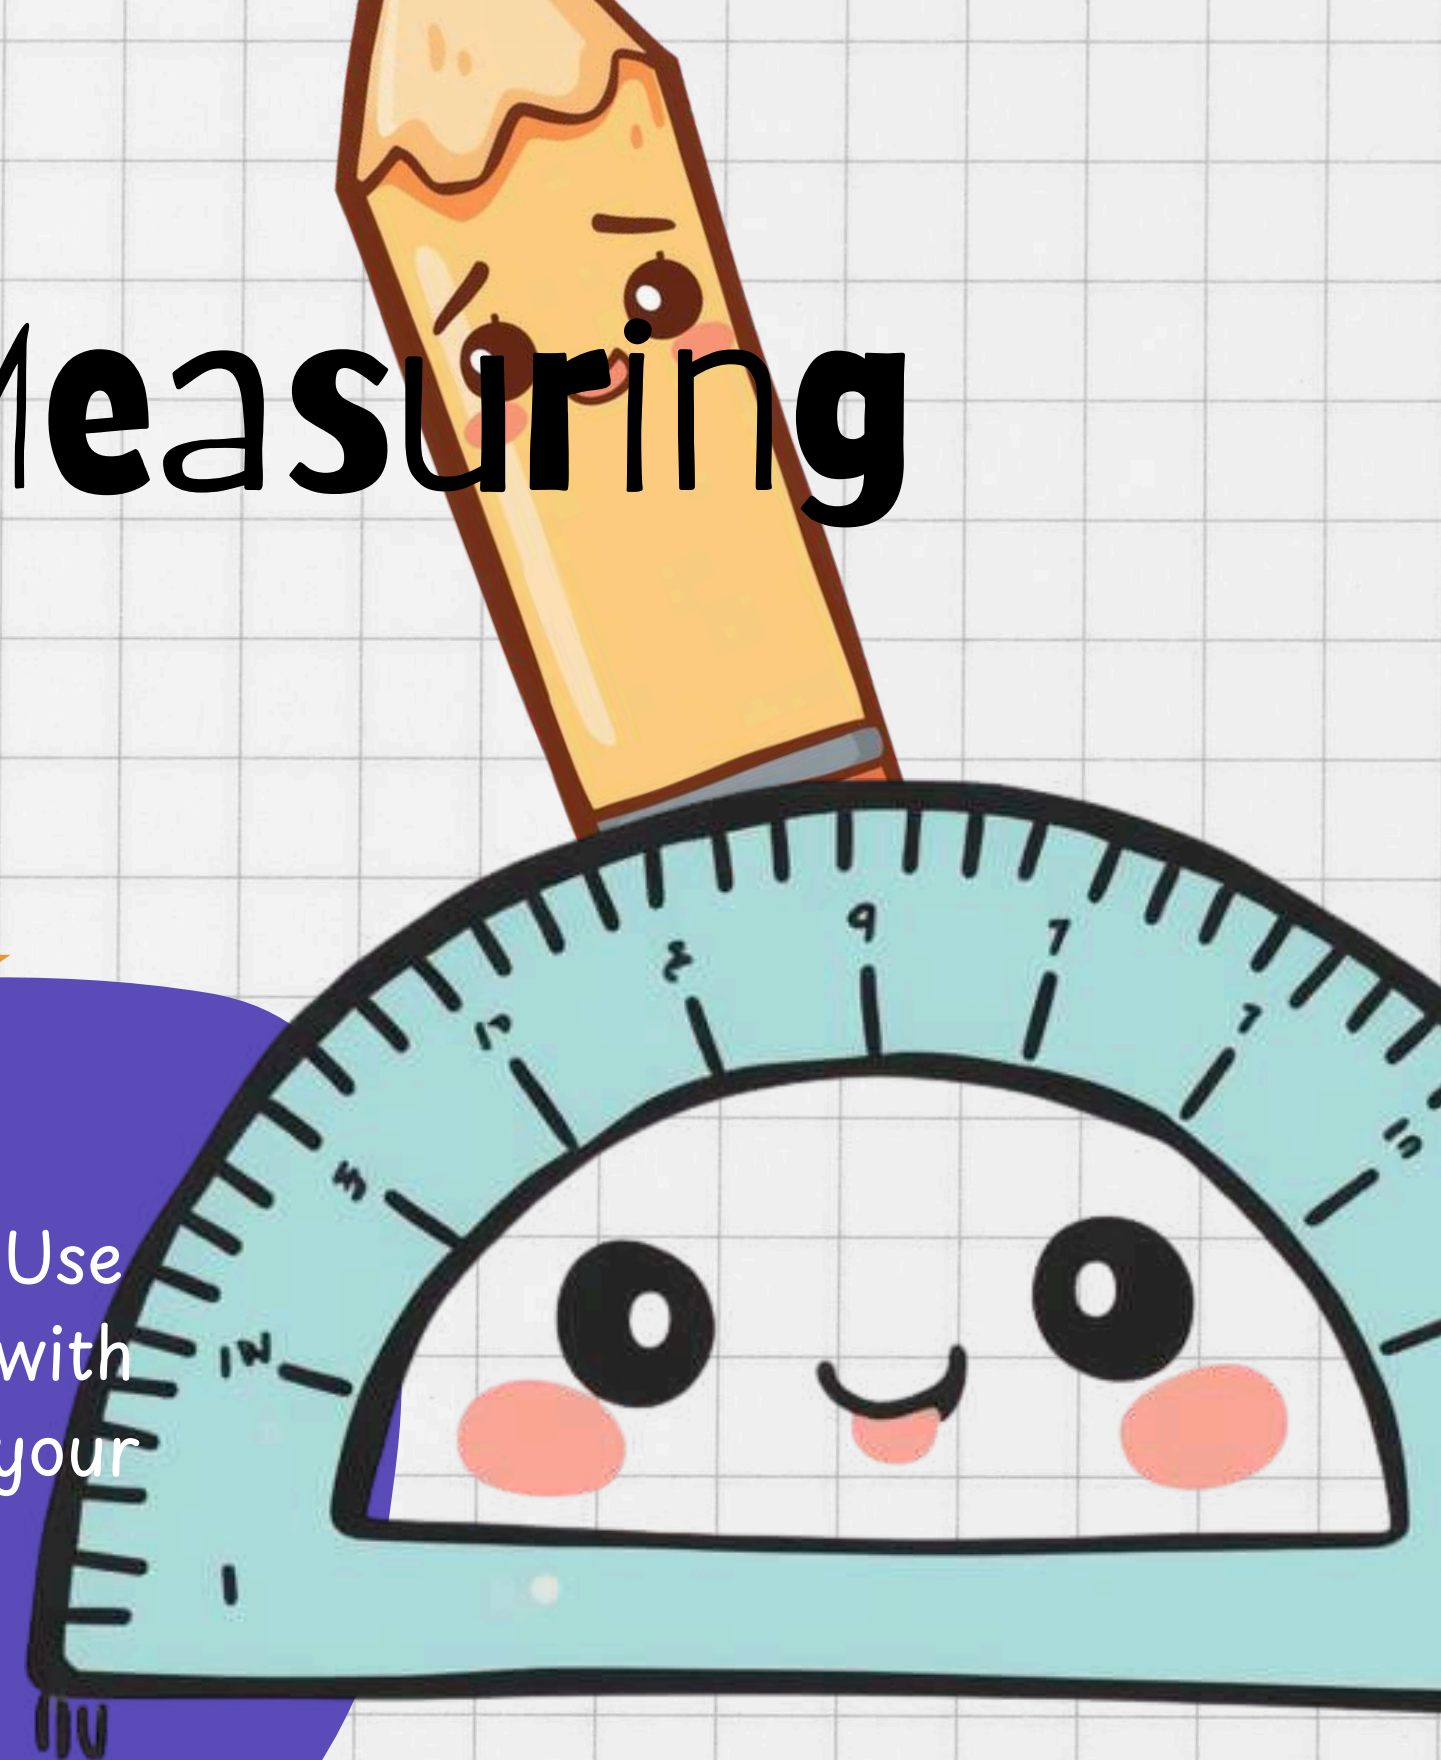

Watch out for these common errors when measuring angles:

- Misplacing the center hole away from the vertex
 - Not aligning the baseline with zero degrees
 - Reading the wrong scale on the protractor
- Always double-check your placement!

Tips for Accurate Measuring

Always double-check the vertex placement. Use a sharp pencil to draw clear lines. Practice with different angles to improve your skill. Keep your protractor clean and flat on paper.

Fun Facts About Angles!

Did you know? Angles are everywhere around us! Look at kites flying in the sky, the hands of a clock, and even the beautiful wings of butterflies. They all have angles! Can you spot angles in your classroom too?

Summary: Measuring Angles

1. Place the protractor center on the vertex
2. Align one side with 0°
3. Read the correct scale where the other side crosses
4. Write down the measurement in degrees

Thank You & Questions

Thank you for learning about angles! Do you have any questions? Keep practising measuring angles with your protractor!
