

My Weather App

HTML Project

Pedagogical Philosophy & Approach

- Our teaching approach is ultra-concrete, experiential, and highly visual. We map coding concepts to familiar daily objects that children already know and love!
- Example: HTML elements are like compartments of a Steel Tiffin Box — each section holds specific content in its own special place, just like rice, sabzi, and dal!

Learning Objectives

🧠 Cognitive: Understand a web page as a digital canvas made of code blocks — like a drawing board for your ideas!

👉 Application: Use the `<h1>` tag for big titles and the `<img>` tag to add pictures to your weather app.

🎮 Psychomotor: Change text and swap images to show different weather — sunny, rainy, or cloudy!

😊 Affective: Feel excited and confident as you become a young coder.

Web Page Elements as "Containers"

- HTML elements hold specific information, just like compartments in a Steel Tiffin Box! Each compartment keeps rice, vegetable, dal, and pickle separate — everything has its own special place.
- Similarly, HTML tags like `h1` and `img` are containers that hold different types of content on your web page. The heading tag holds your title, the image tag holds your picture — neat and organized!

Key Concept 2 – The Heading Tag ()

- The tag makes text BIG, BOLD, and IMPORTANT! It tells everyone "Look at me first!" Just like the main headlines in newspapers that grab your attention right away.
- Indian Metaphor: Think of the big headlines in Dainik Jagran or Times of India newspapers — they're the first thing you see! Your tag works the same way for your weather app title.

Key Concept 3 – The Image Tag ()

- The tag is like magic — it shows pictures on your web page! Just like how you paste photos in your scrapbook, the image tag puts pictures exactly where you want them.
- Think about your favorite scrapbook at home. You paste photos of mangoes, elephants, or your family trip to the zoo. The tag works the same way — it pastes pictures onto your digital page!

Key Concept 4 – Weather Variability in India

☀️ Hot Sunny Chennai Afternoon

When the sun shines bright in Chennai, we feel very hot! That's when we drink cold Buttermilk to cool down. The weather makes us thirsty!

☁️ Rainy Mumbai Evening

When dark clouds bring rain and thunder to Mumbai, we stay cozy inside and eat yummy hot Pakoras! Different weather means different treats!

Session Outline & Timing

- 00:00-05:00: Hook & Context Setting
- "Aanya and her Magic Weather Window" — A fun story to spark curiosity about weather and coding!
- 05:00-12:00: Conceptual Breakdown
- The Tiffin Box Code — Learn how HTML tags are like compartments holding different things.
- 12:00-25:00: Guided Code-Along Project
- Live App Build — Create your very own weather page with titles and pictures!
- 25:00-30:00: Show & Tell + Quiz Wrap-Up
- Share your weather app and play a fun quiz to celebrate your learning!

Content Production Outputs

- Interactive Script & Storyboard
- Kinetic text overlays with playful tag icons, animated transitions, and engaging storytelling elements that bring Aanya's weather journey to life.
- Sandboxed Code Editor Template
- Simplified HTML interface with large fonts and click-to-insert assets. Student Workbook with visual connect-the-dots activities and guided checkboxes.

Tone, Style & Brand Guide

- Voice: Energetic, warm, imaginative, and kid-friendly! We use short sentences with dual-language references like (weather) and (rain) to connect with young Indian learners.
- Visual Style: Vibrant pastel colors with diverse Indian children characters. Fonts: Baloo 2 for bold, playful headings and Quicksand for friendly, readable body text. Every element should feel welcoming and fun!

Things to Avoid

These are important rules to keep our coding fun and easy!

- ✗ No boilerplate tags like `,, —` we keep it simple!
- ✗ No typing long URLs or file paths — use click-to-insert assets instead
- ✗ Avoid abstract examples — no snow or blizzards! We use Indian weather like monsoon and sunny days
- ✗ No scary error messages — we use gentle, friendly prompts to help you learn

Thank You!
