

INTRODUCTION TO CIRCLES

Let's explore the
world of circles!

What is a Circle?

A circle is a round shape where every point is the same distance from the center.

Look around you! Circles are everywhere:

- Wheels on a bicycle
 - A round plate
 - A clock face
 - A beautiful bangle

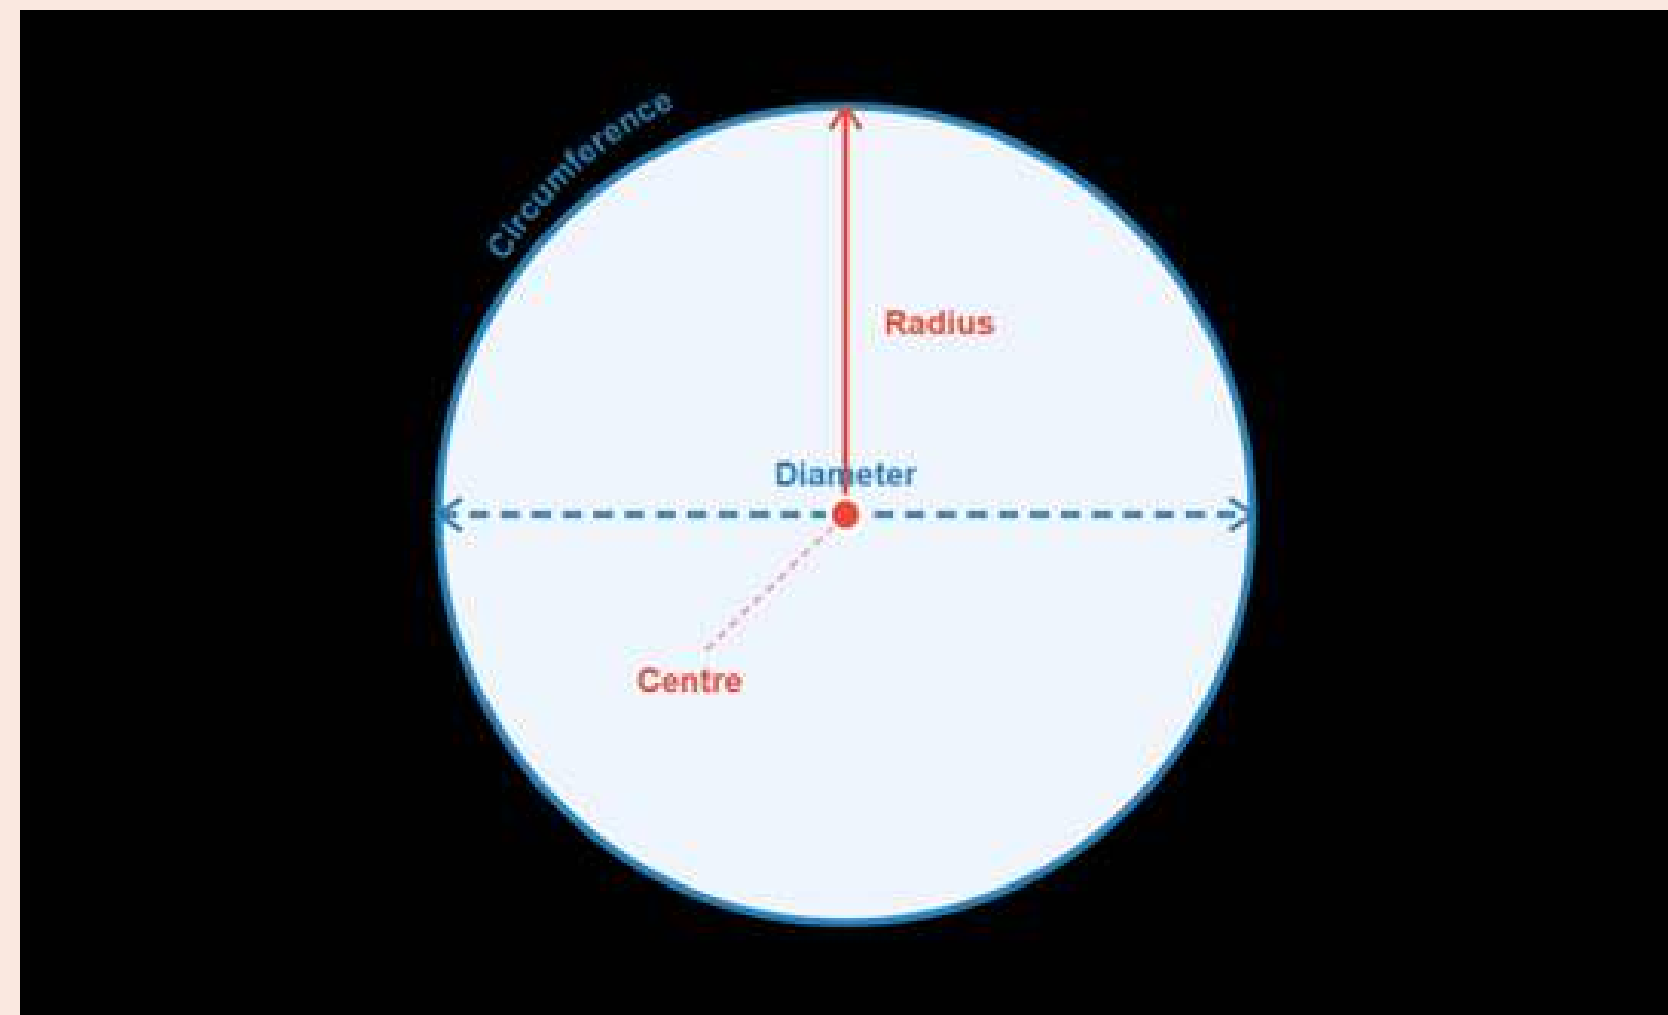

Let's Learn!

Parts of a Circle

Center - the middle point

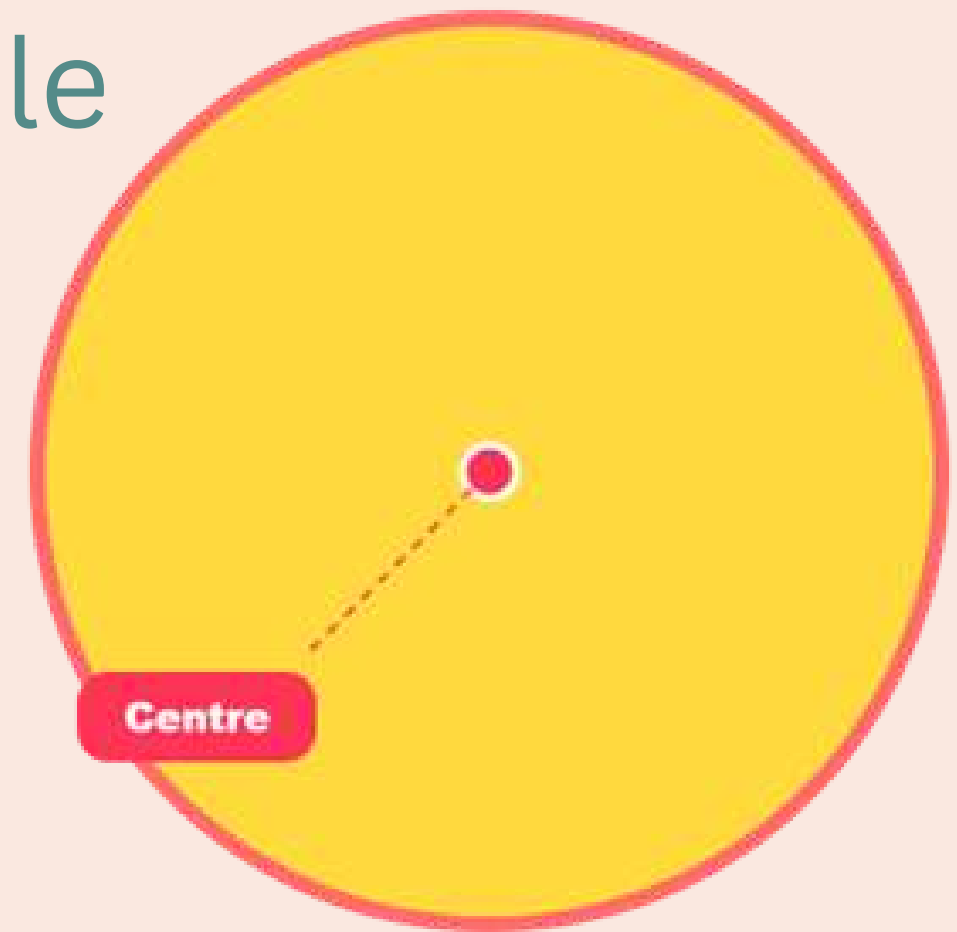

Radius - center to edge

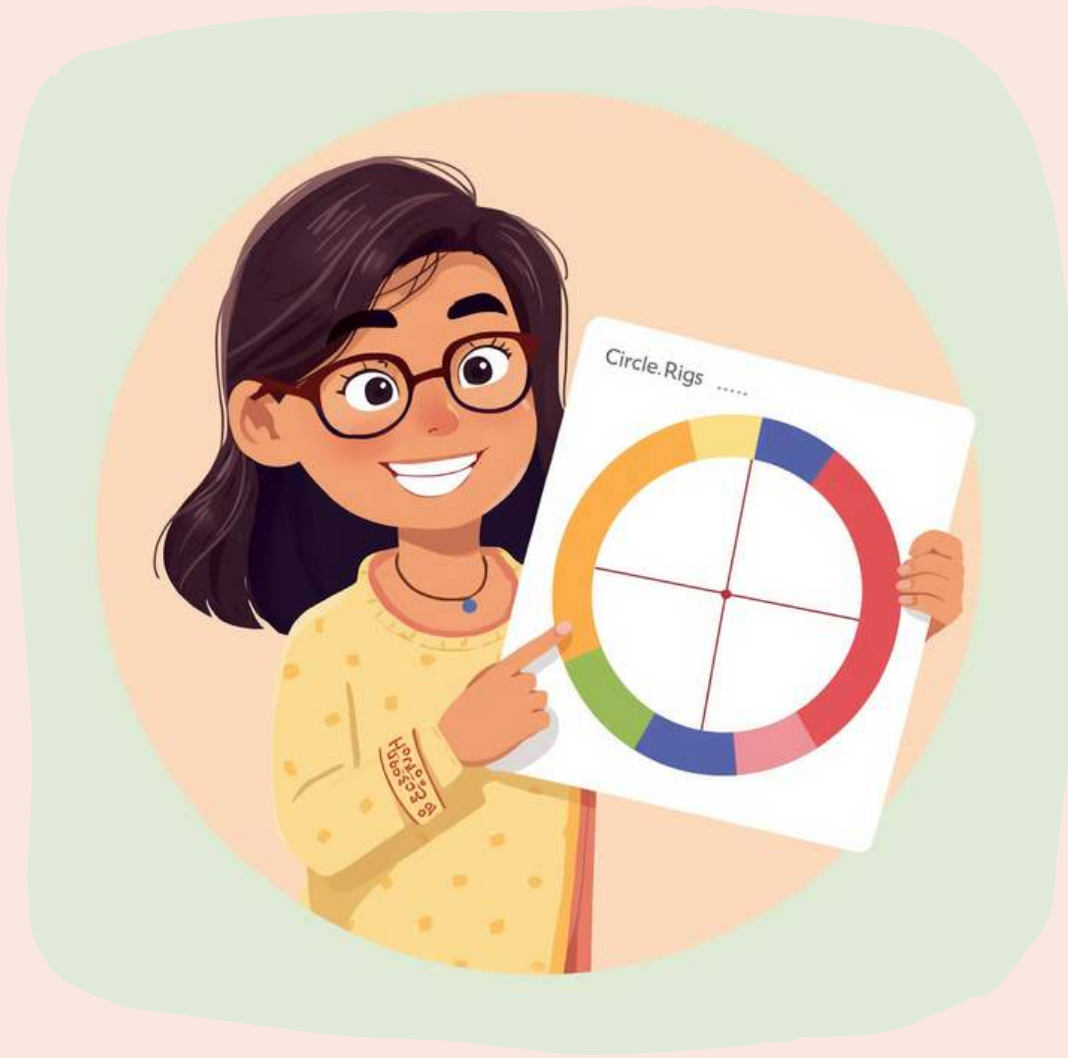

Diameter - across the circle

The Center Point

The center is the middle point of a circle.

What is Radius?

Radius is the distance from the center to the edge of the circle.

Imagine a pizza slice - the radius is like the straight edge from the middle to the crust!

Remember: Every radius in a circle is the same length.

Let's Learn!

Radius in Action

Can you spot the
radius?

Let's Learn!

What is Diameter?

Diameter is the distance across the circle, passing through the center. It's like drawing a line from one side of the circle to the other, going right through the middle!

Remember: $\text{Diameter} = 2 \times \text{Radius}$
If your radius is 5 cm, your diameter is 10 cm!

Diameter Examples

Wheels, Bangles &
Plates

Radius vs Diameter

Radius: Center to edge

Diameter: Edge to edge

$$\text{Diameter} = 2 \times \text{Radius}$$

Introduction to Circumference

Circumference is the distance all around the circle. Imagine wrapping a ribbon around a circular cookie - that ribbon's length is the circumference! It's like measuring how far you would walk if you went all the way around a circle.

Let's
Measure!

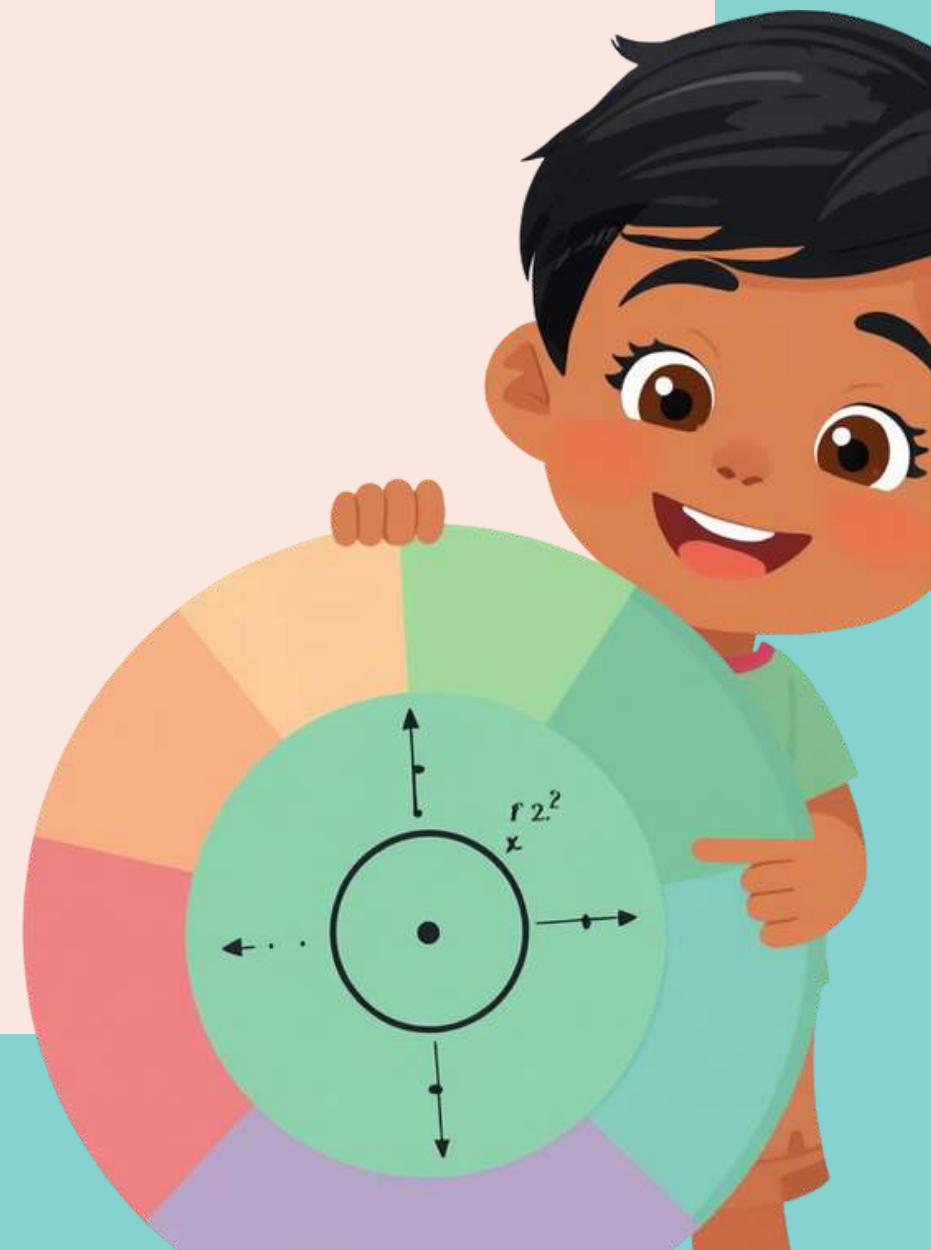

Circumference Explained

The distance all around a circle is called circumference - like walking around a circular park!

Circumference Formula

$$C = \pi \times d$$

To calculate this, we use Pi (π), which is approximately 3.14

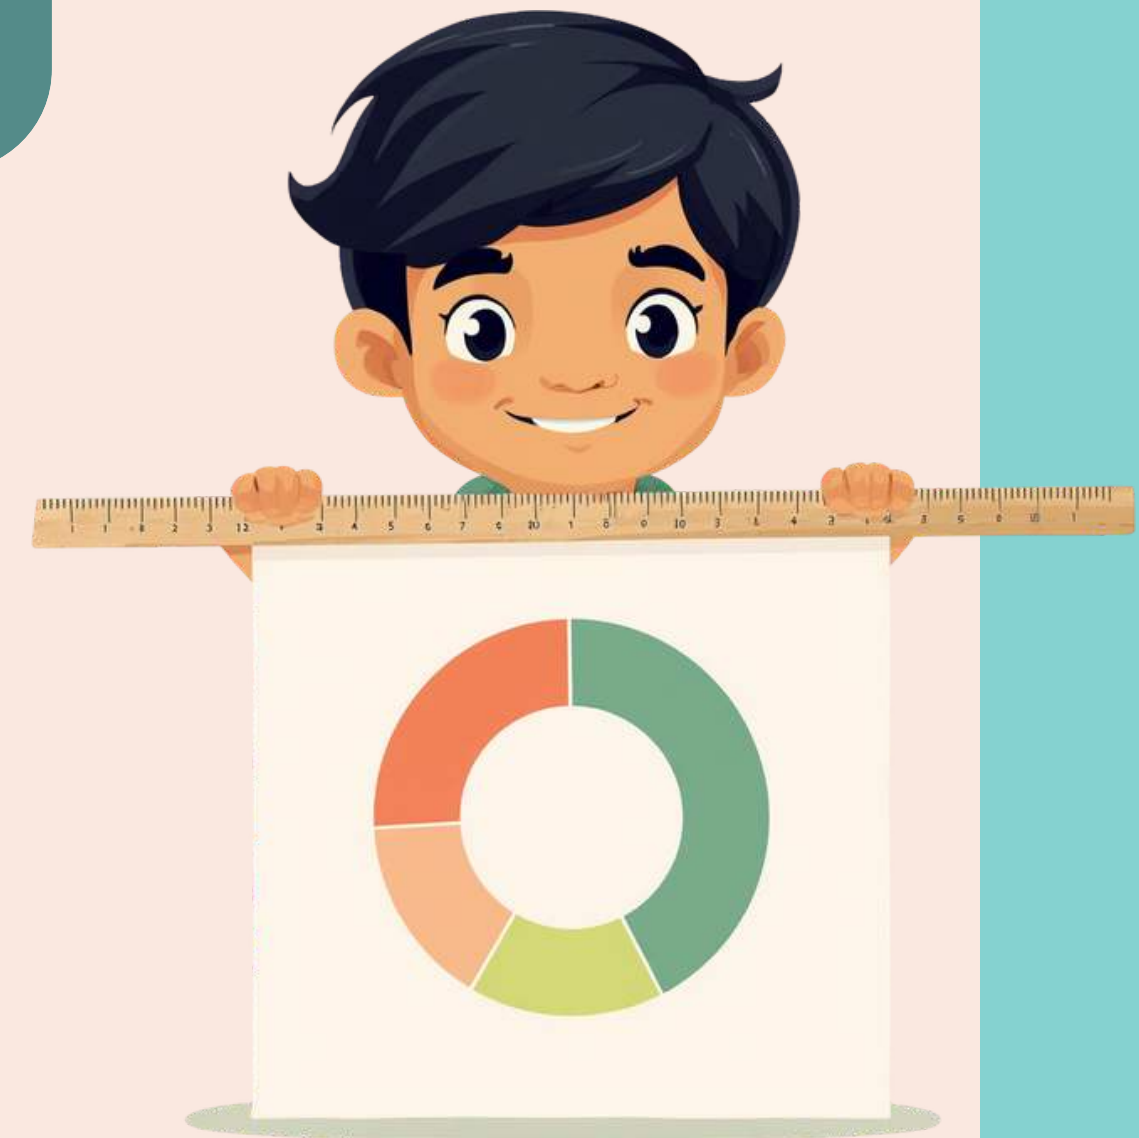

Calculating Circumference

Diameter = 10 cm

$$C = \pi \times d = 3.14 \times 10$$

Circumference = 31.4
cm

Fun Circle Facts

Circles have no corners!

Wheels help us move
faster

Pi (π) goes on forever!

Thank You for Learning About
Circles!
