

**DESIGN YOUR
OWN ROBOT!**

WHAT IS A ROBOT?

A robot is a machine that can do jobs and help people. Robots can move, think, and work — sometimes all on their own! They come in many shapes and sizes, and they are built to make our lives easier and more fun.

Robots are helpers made by people, for people!

ROBOTS AND AI: BEST FRIENDS!

AI helps robots learn and make smart choices! Just like how we learn at school, robots use AI to understand the world around them and get better every day.

AI gives robots a "brain" to think, learn, and solve problems!

Together, AI and robots can help people in amazing ways!

WHY ARE ROBOTS COOL?

Robots are amazing machines that can do so many wonderful things! They help make our lives easier, safer, and a lot more fun every single day.

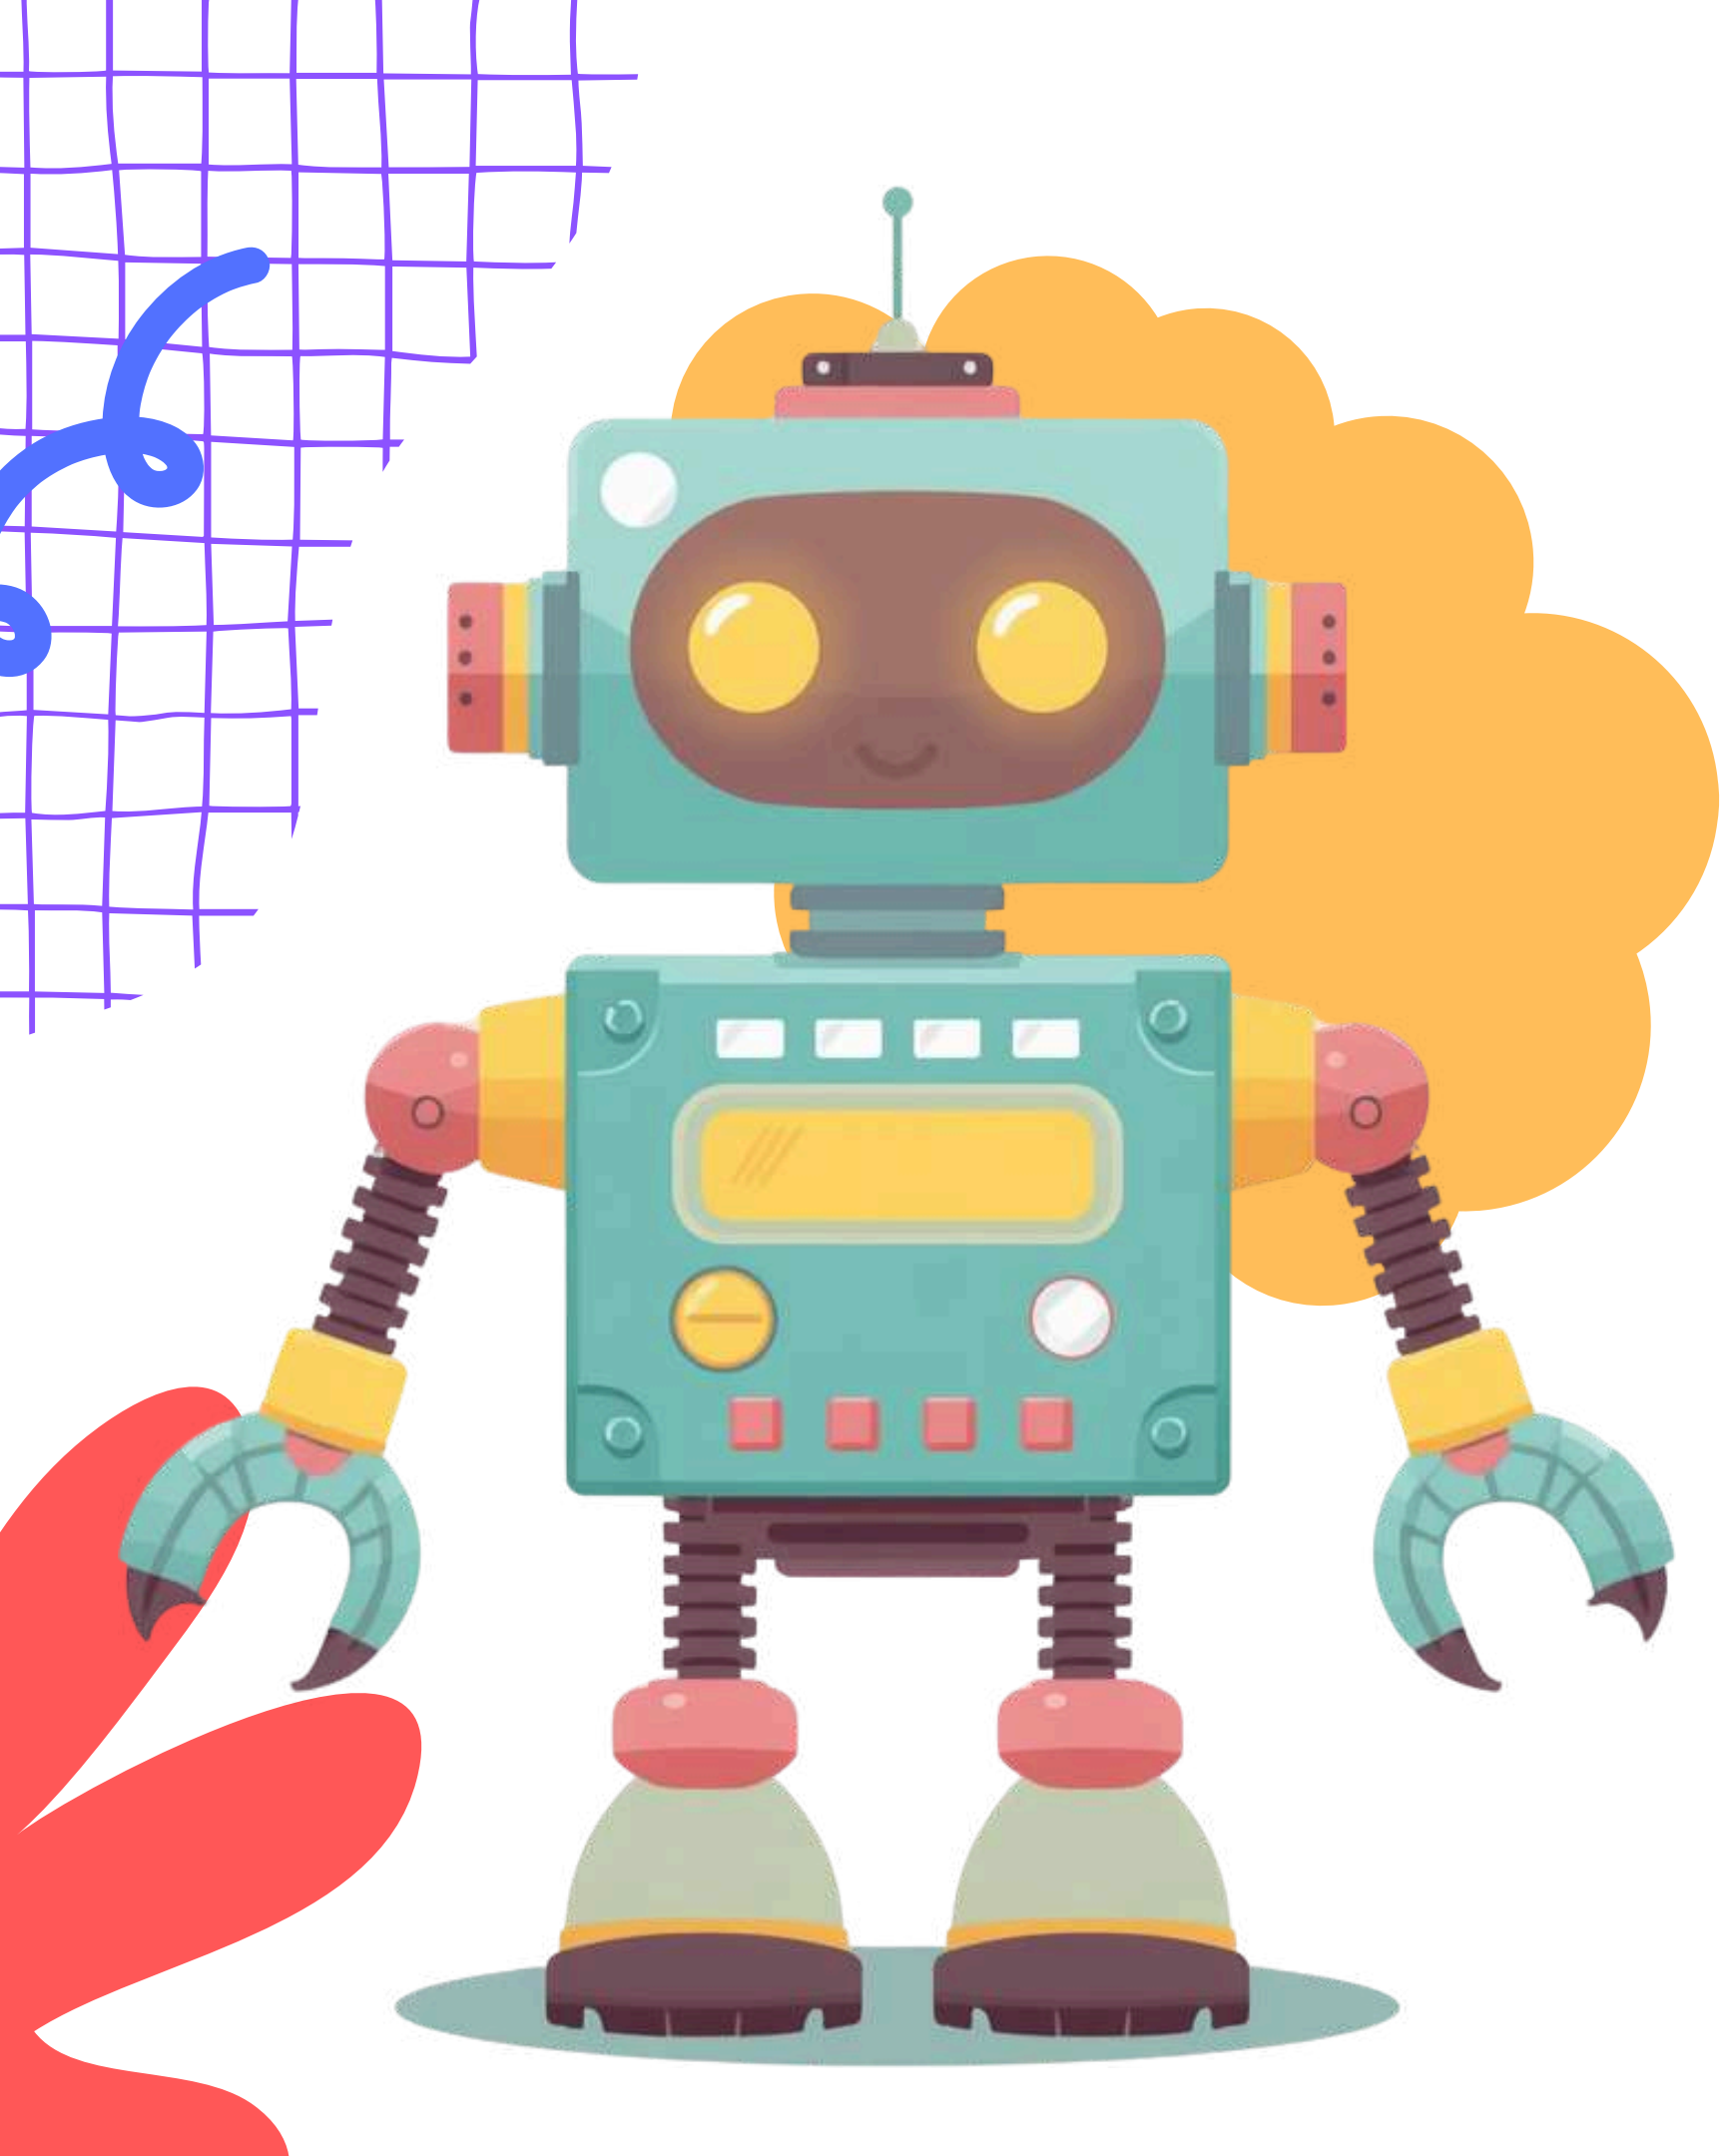

Robots can help us every day with tasks big and small!

Robots can learn new things and get smarter!

Robots can do things we find hard or dangerous!

Robots can be our friends and helpful helpers!

MEET ROBOT PARTS!

Every robot is made of special parts that work together. Let's explore what makes a robot move, think, and do amazing things!

Head: where the robot's brain lives!

Body: holds all the parts together!

Arms: help the robot grab and move things!

Legs or wheels: help the robot move around!

HOW DO ROBOTS LEARN?

Robots learn by practising and watching! Just like you learn to write by practising every day, robots learn by looking at lots of pictures and trying things again and again. The more a robot practises, the smarter it gets!

What would YOU teach your robot? 🤔

LET'S DESIGN YOUR ROBOT!

Imagine your own robot. What will it look like?

Think about the shape of its head, the style of its body, and what special features it will have. Every robot is unique — just like you! Grab your pencil and let your imagination run wild!

What colors and shapes will YOU choose for your robot?

CHOOSE A HEAD!

Every robot needs a head! That is where its brain lives. Pick the head shape you like best for your very own robot!

Round head with big, friendly eyes.

Square head with a tall antenna on top.

Triangle head with colourful blinking lights.

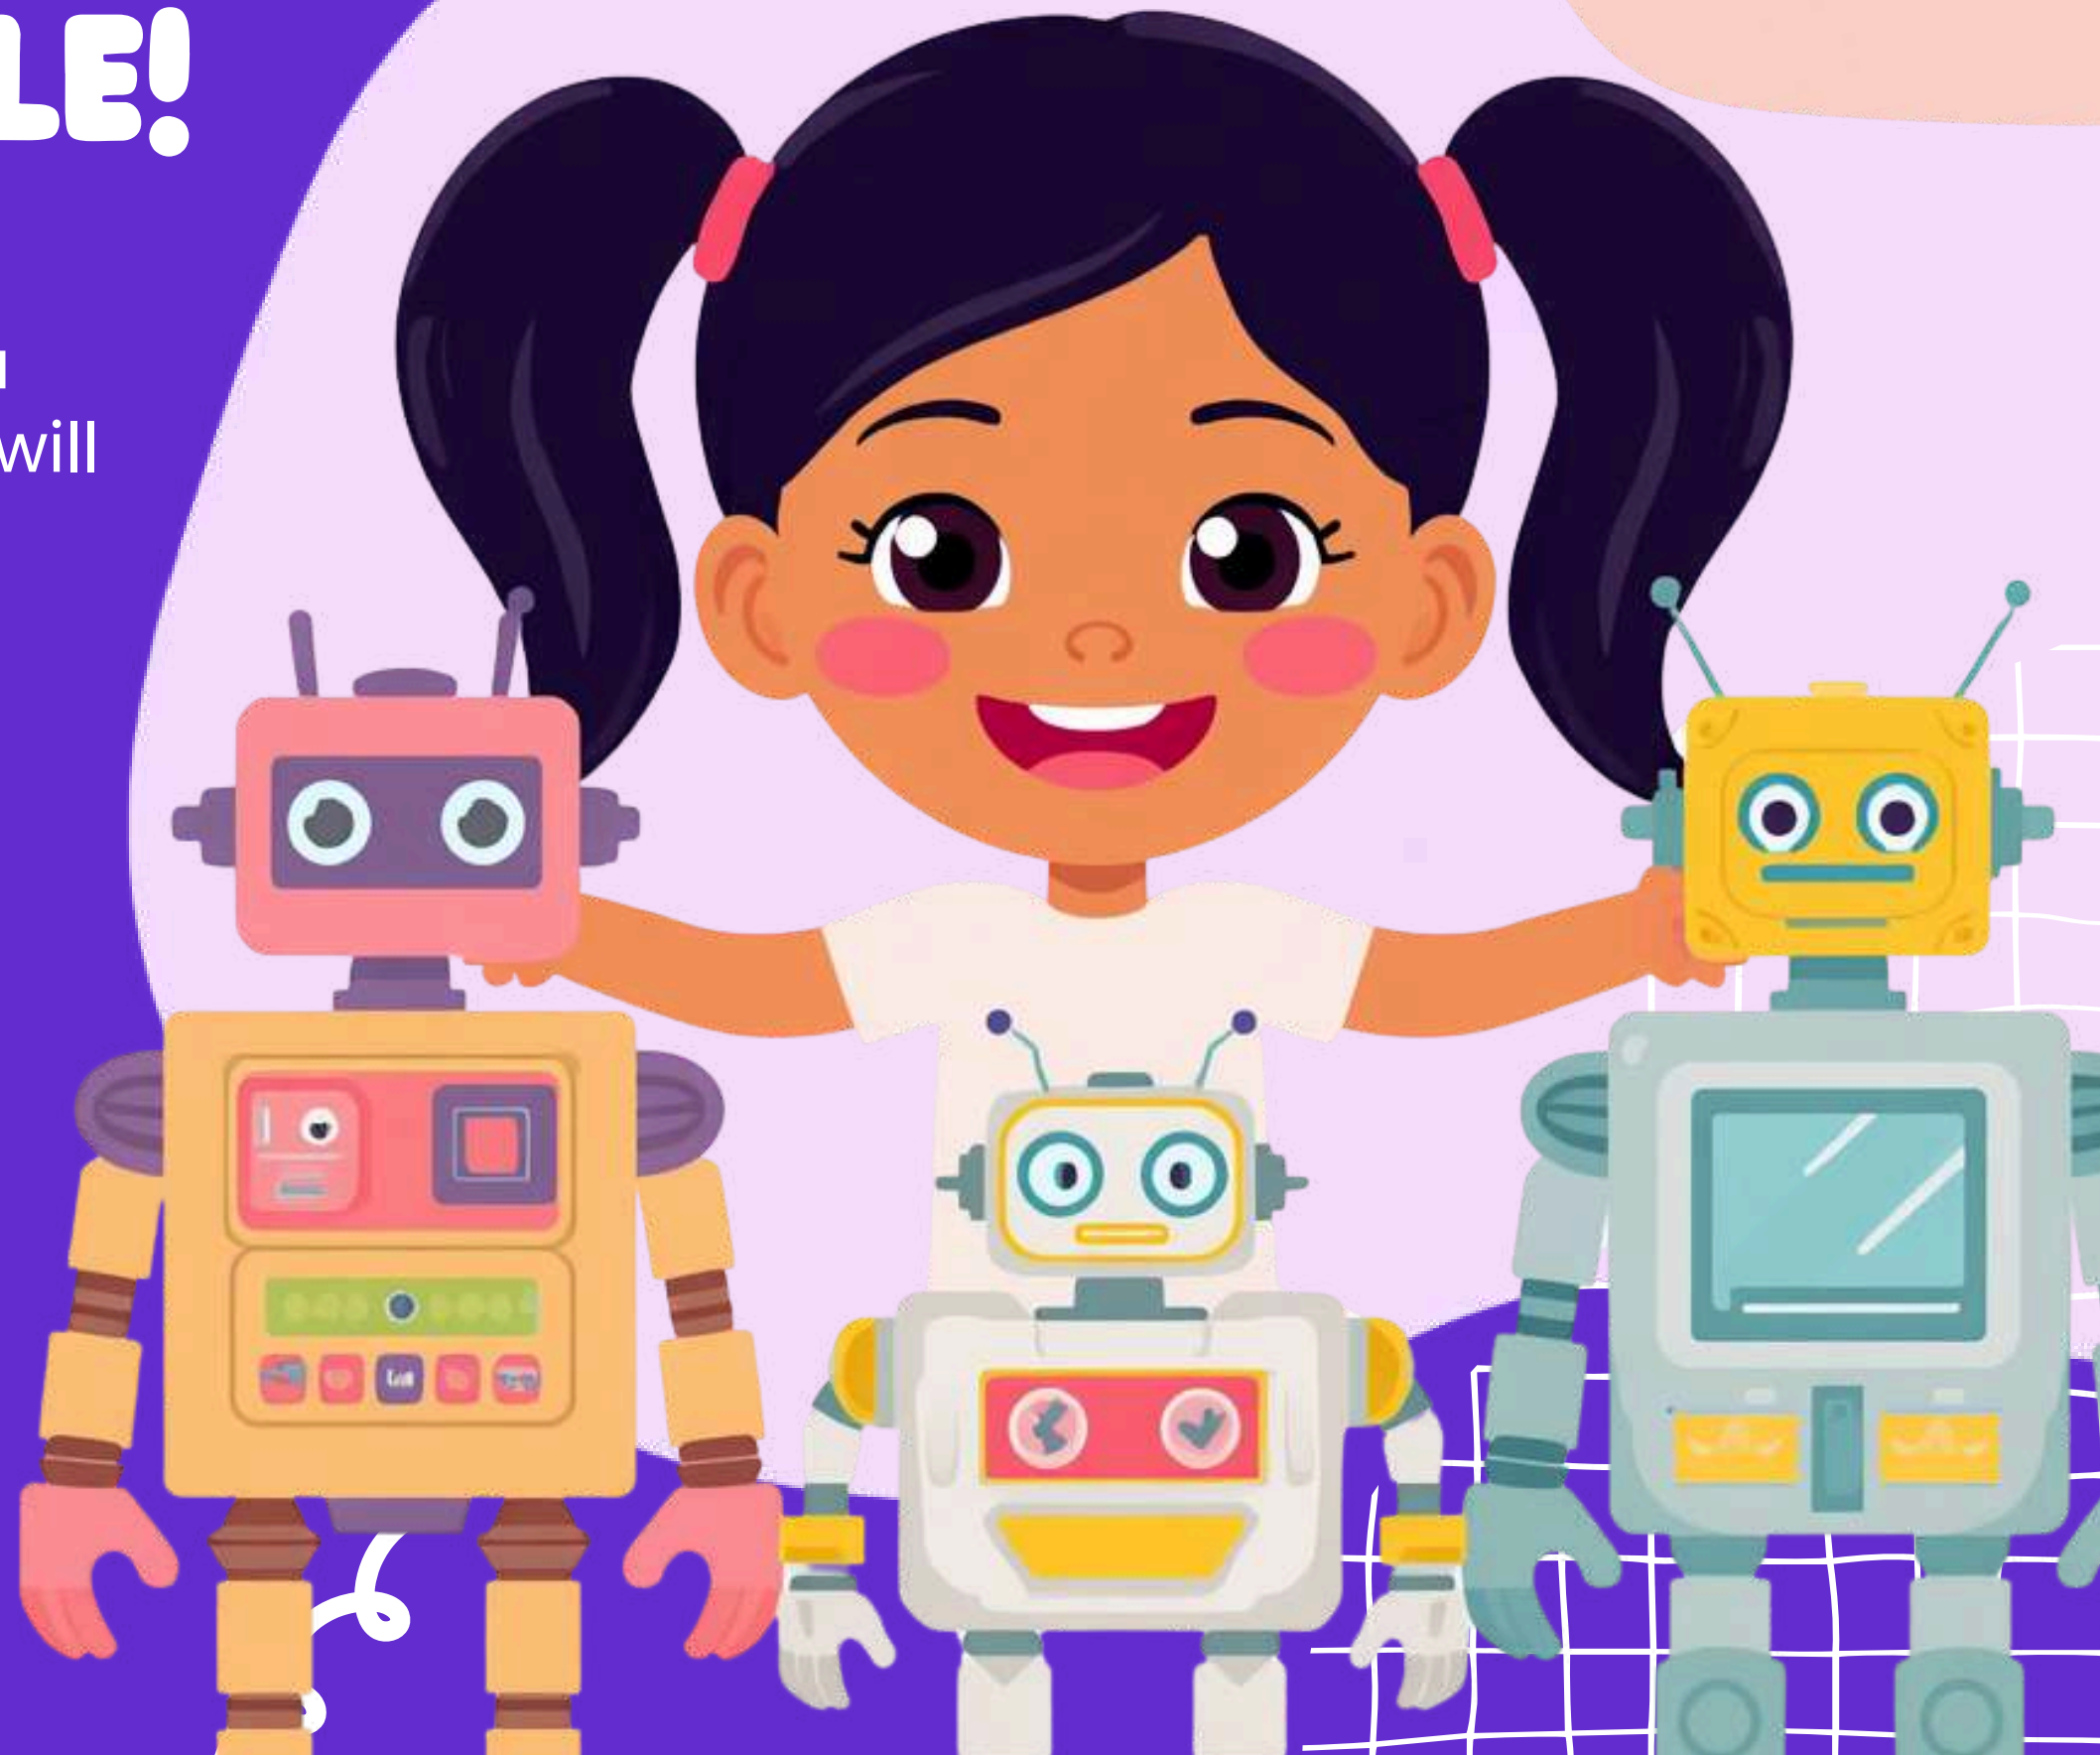

PICK A BODY STYLE!

Every robot needs a body! The body holds all the parts together. Choose a body shape that fits what your robot will do!

Boxy body with lots of buttons and switches.

Round body with glowing screens and lights.

Tall slim body with shiny panels and gadgets.

SELECT ARMS AND HANDS!

Every robot needs arms and hands to do cool things! Pick the perfect arms for your robot and think about what you want it to do.

Claw hands for grabbing and picking things up.

Gentle hands for hugging and holding softly.

Tool hands with screwdrivers or paintbrushes!

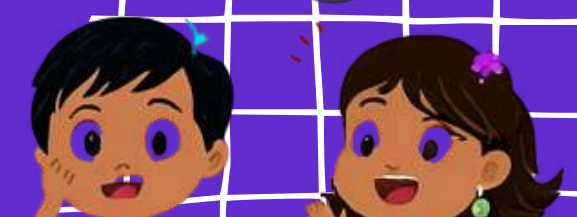

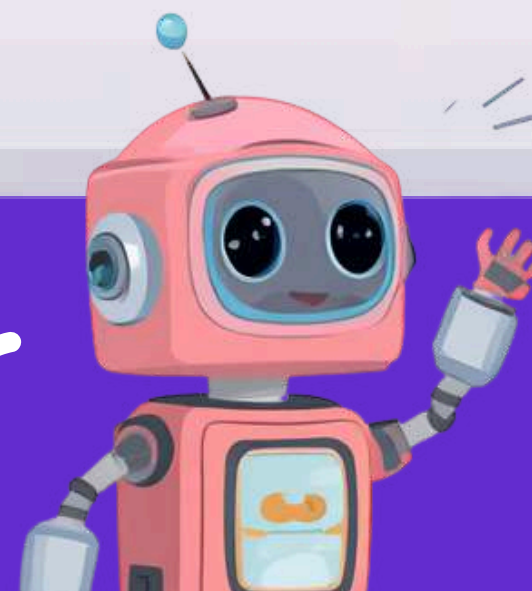

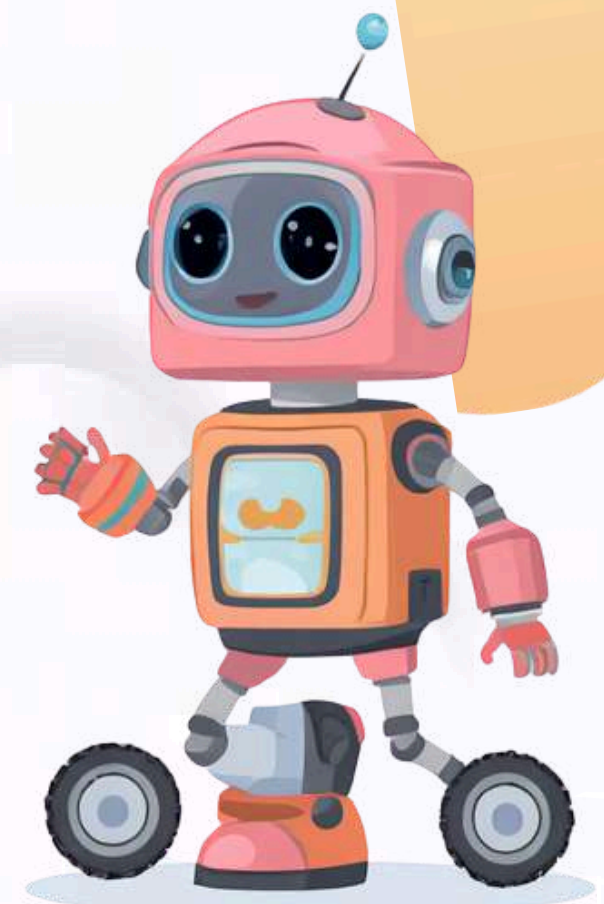

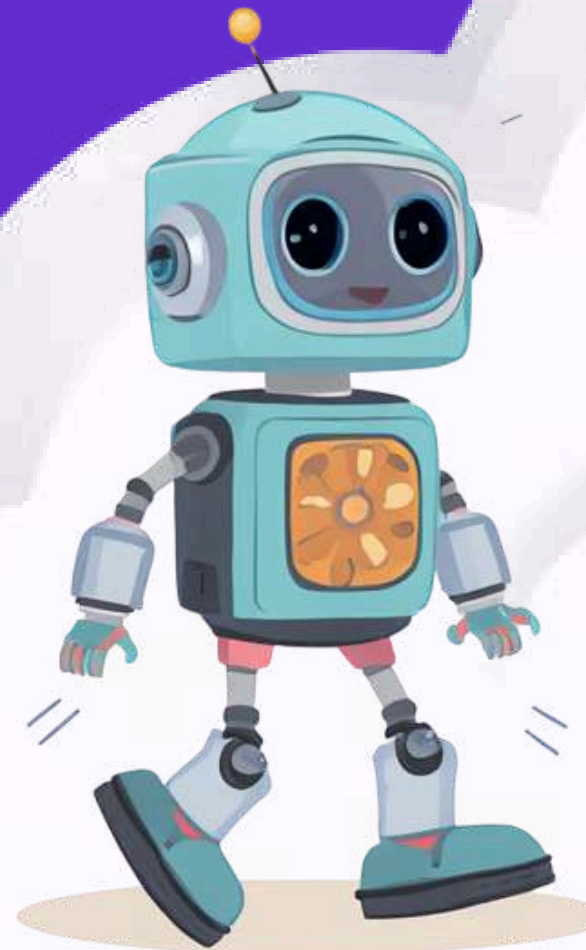

CHOOSE HOW YOUR ROBOT MOVES!

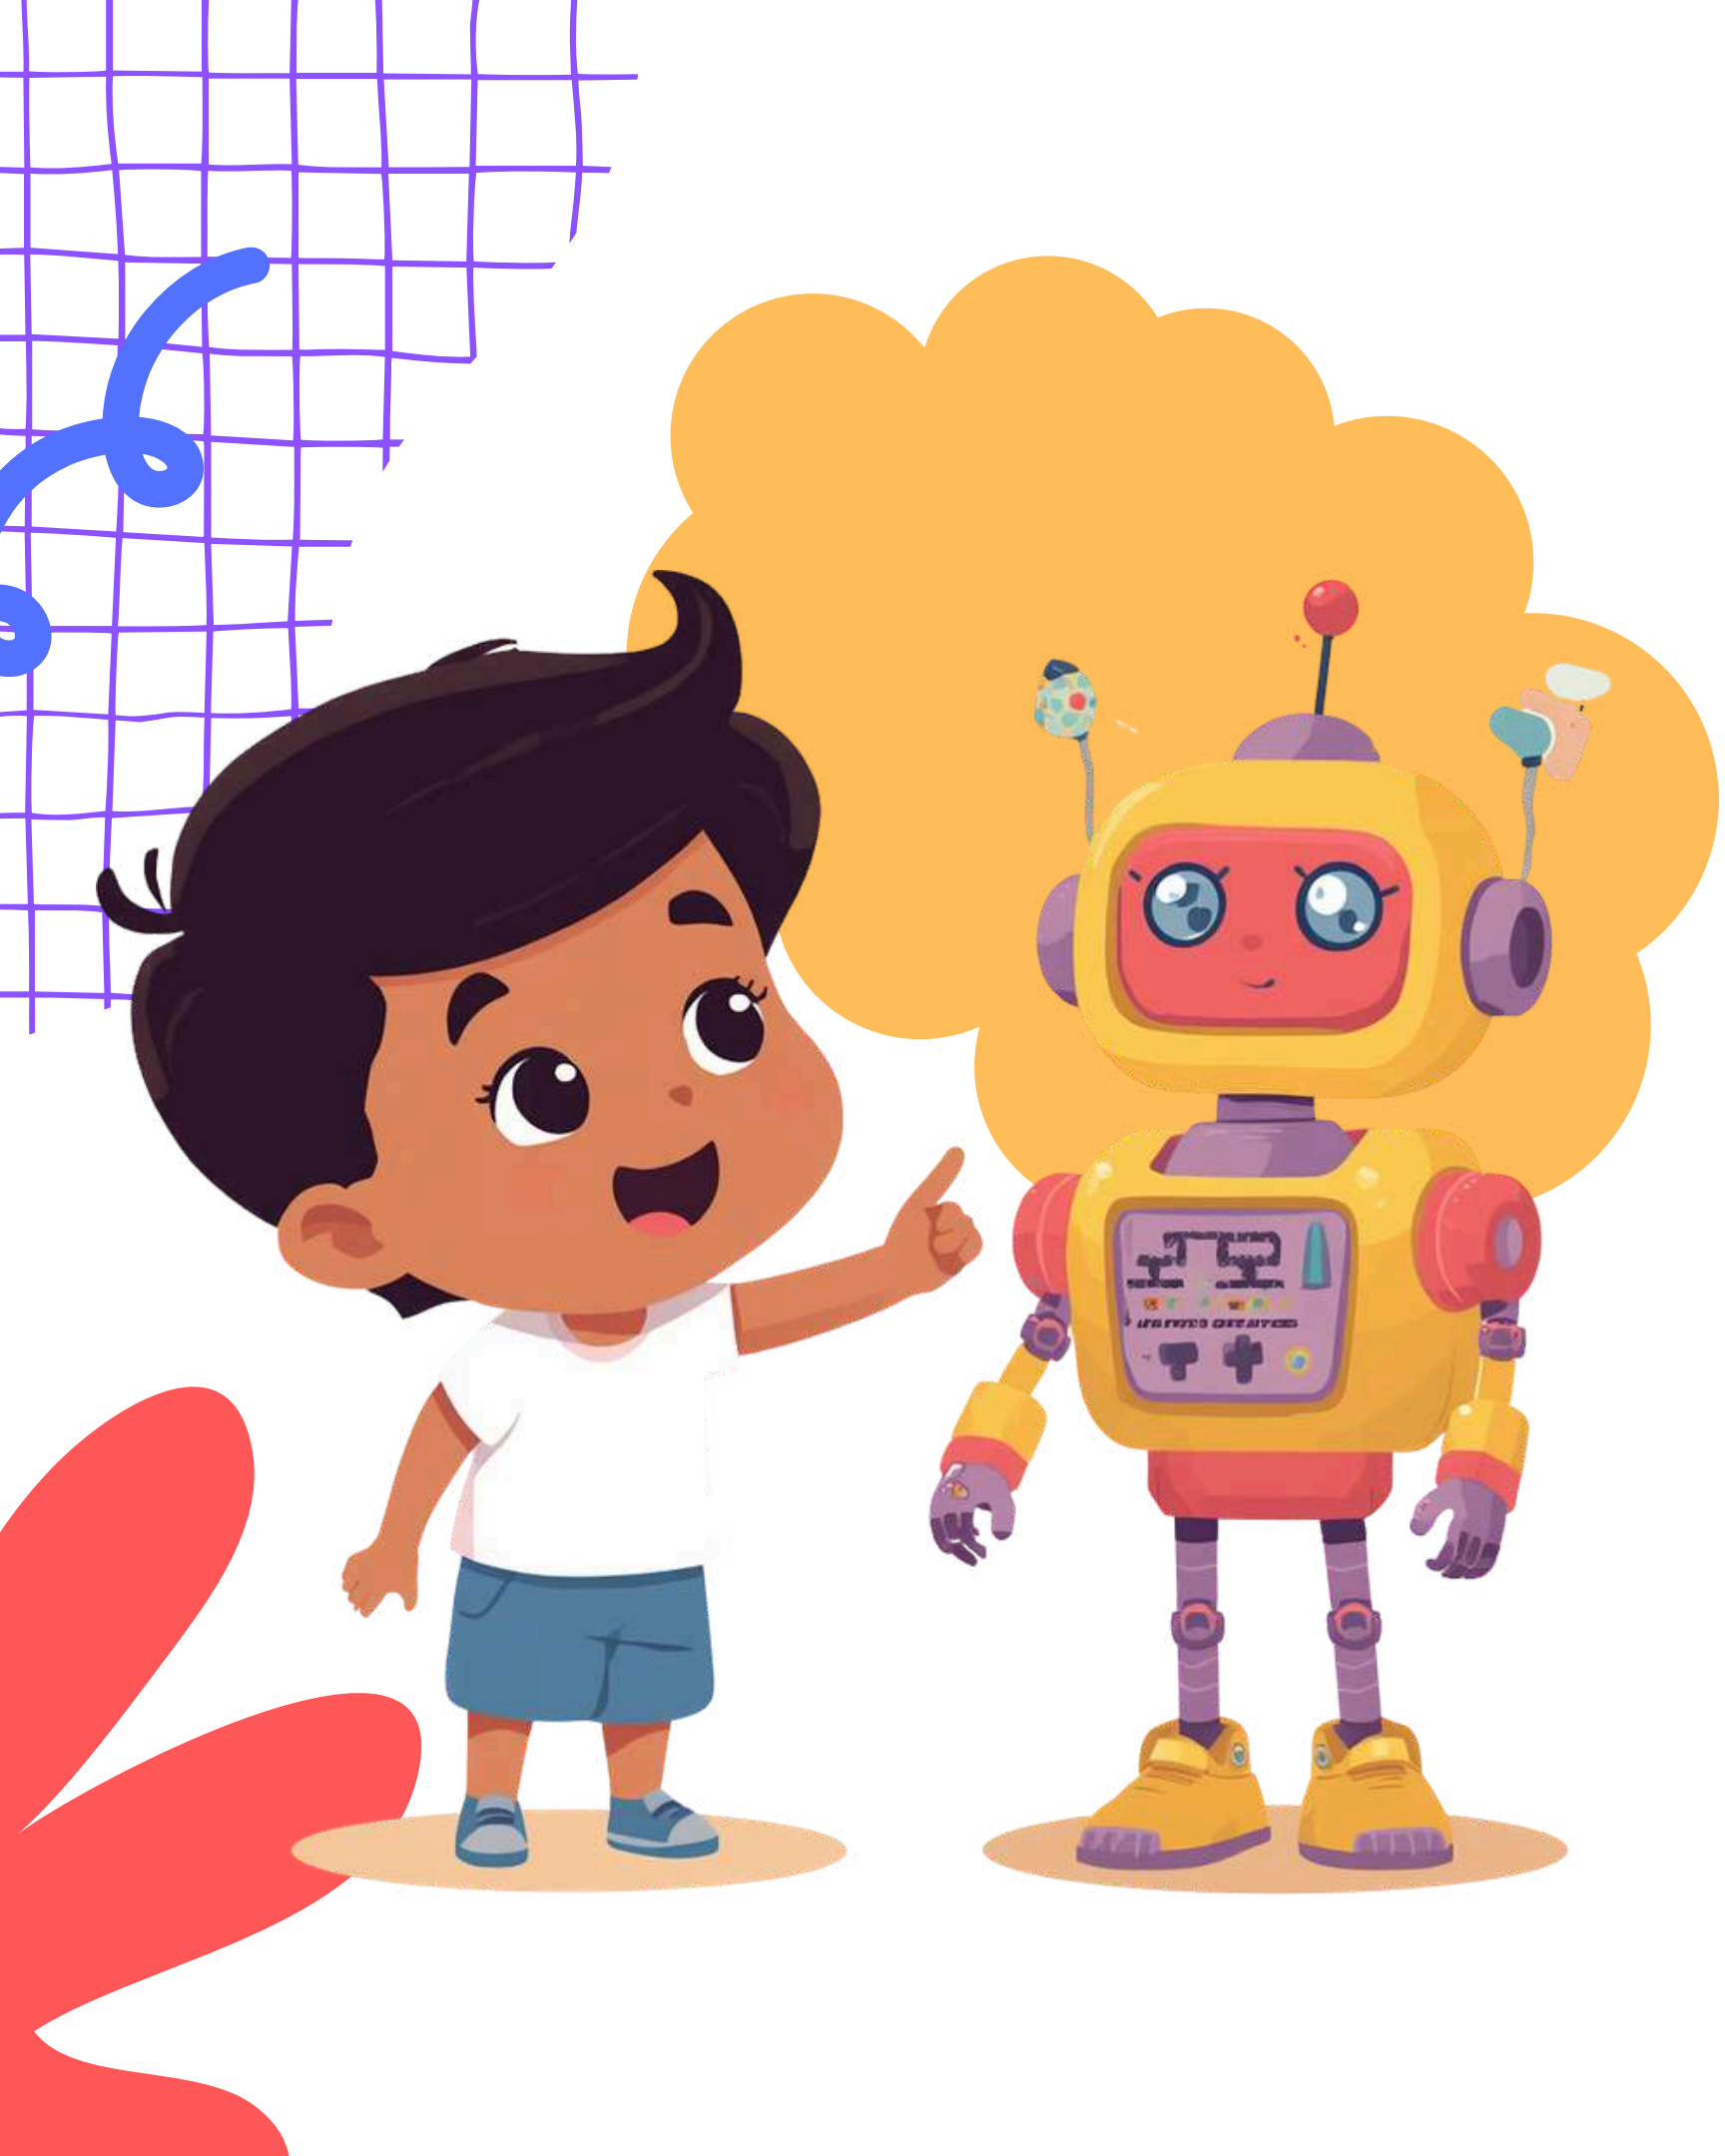

Robots can move in many cool ways! Each movement style helps the robot do different things. Which way would your robot move?

Legs for walking and running around!

Wheels for rolling fast and smooth!

Hovering with small fans to fly!

ADD SPECIAL FEATURES!

Make your robot truly amazing! Give it special powers and abilities that make it unique and super helpful to everyone around it.

Can talk and sing songs for you!

Can help clean up the room!

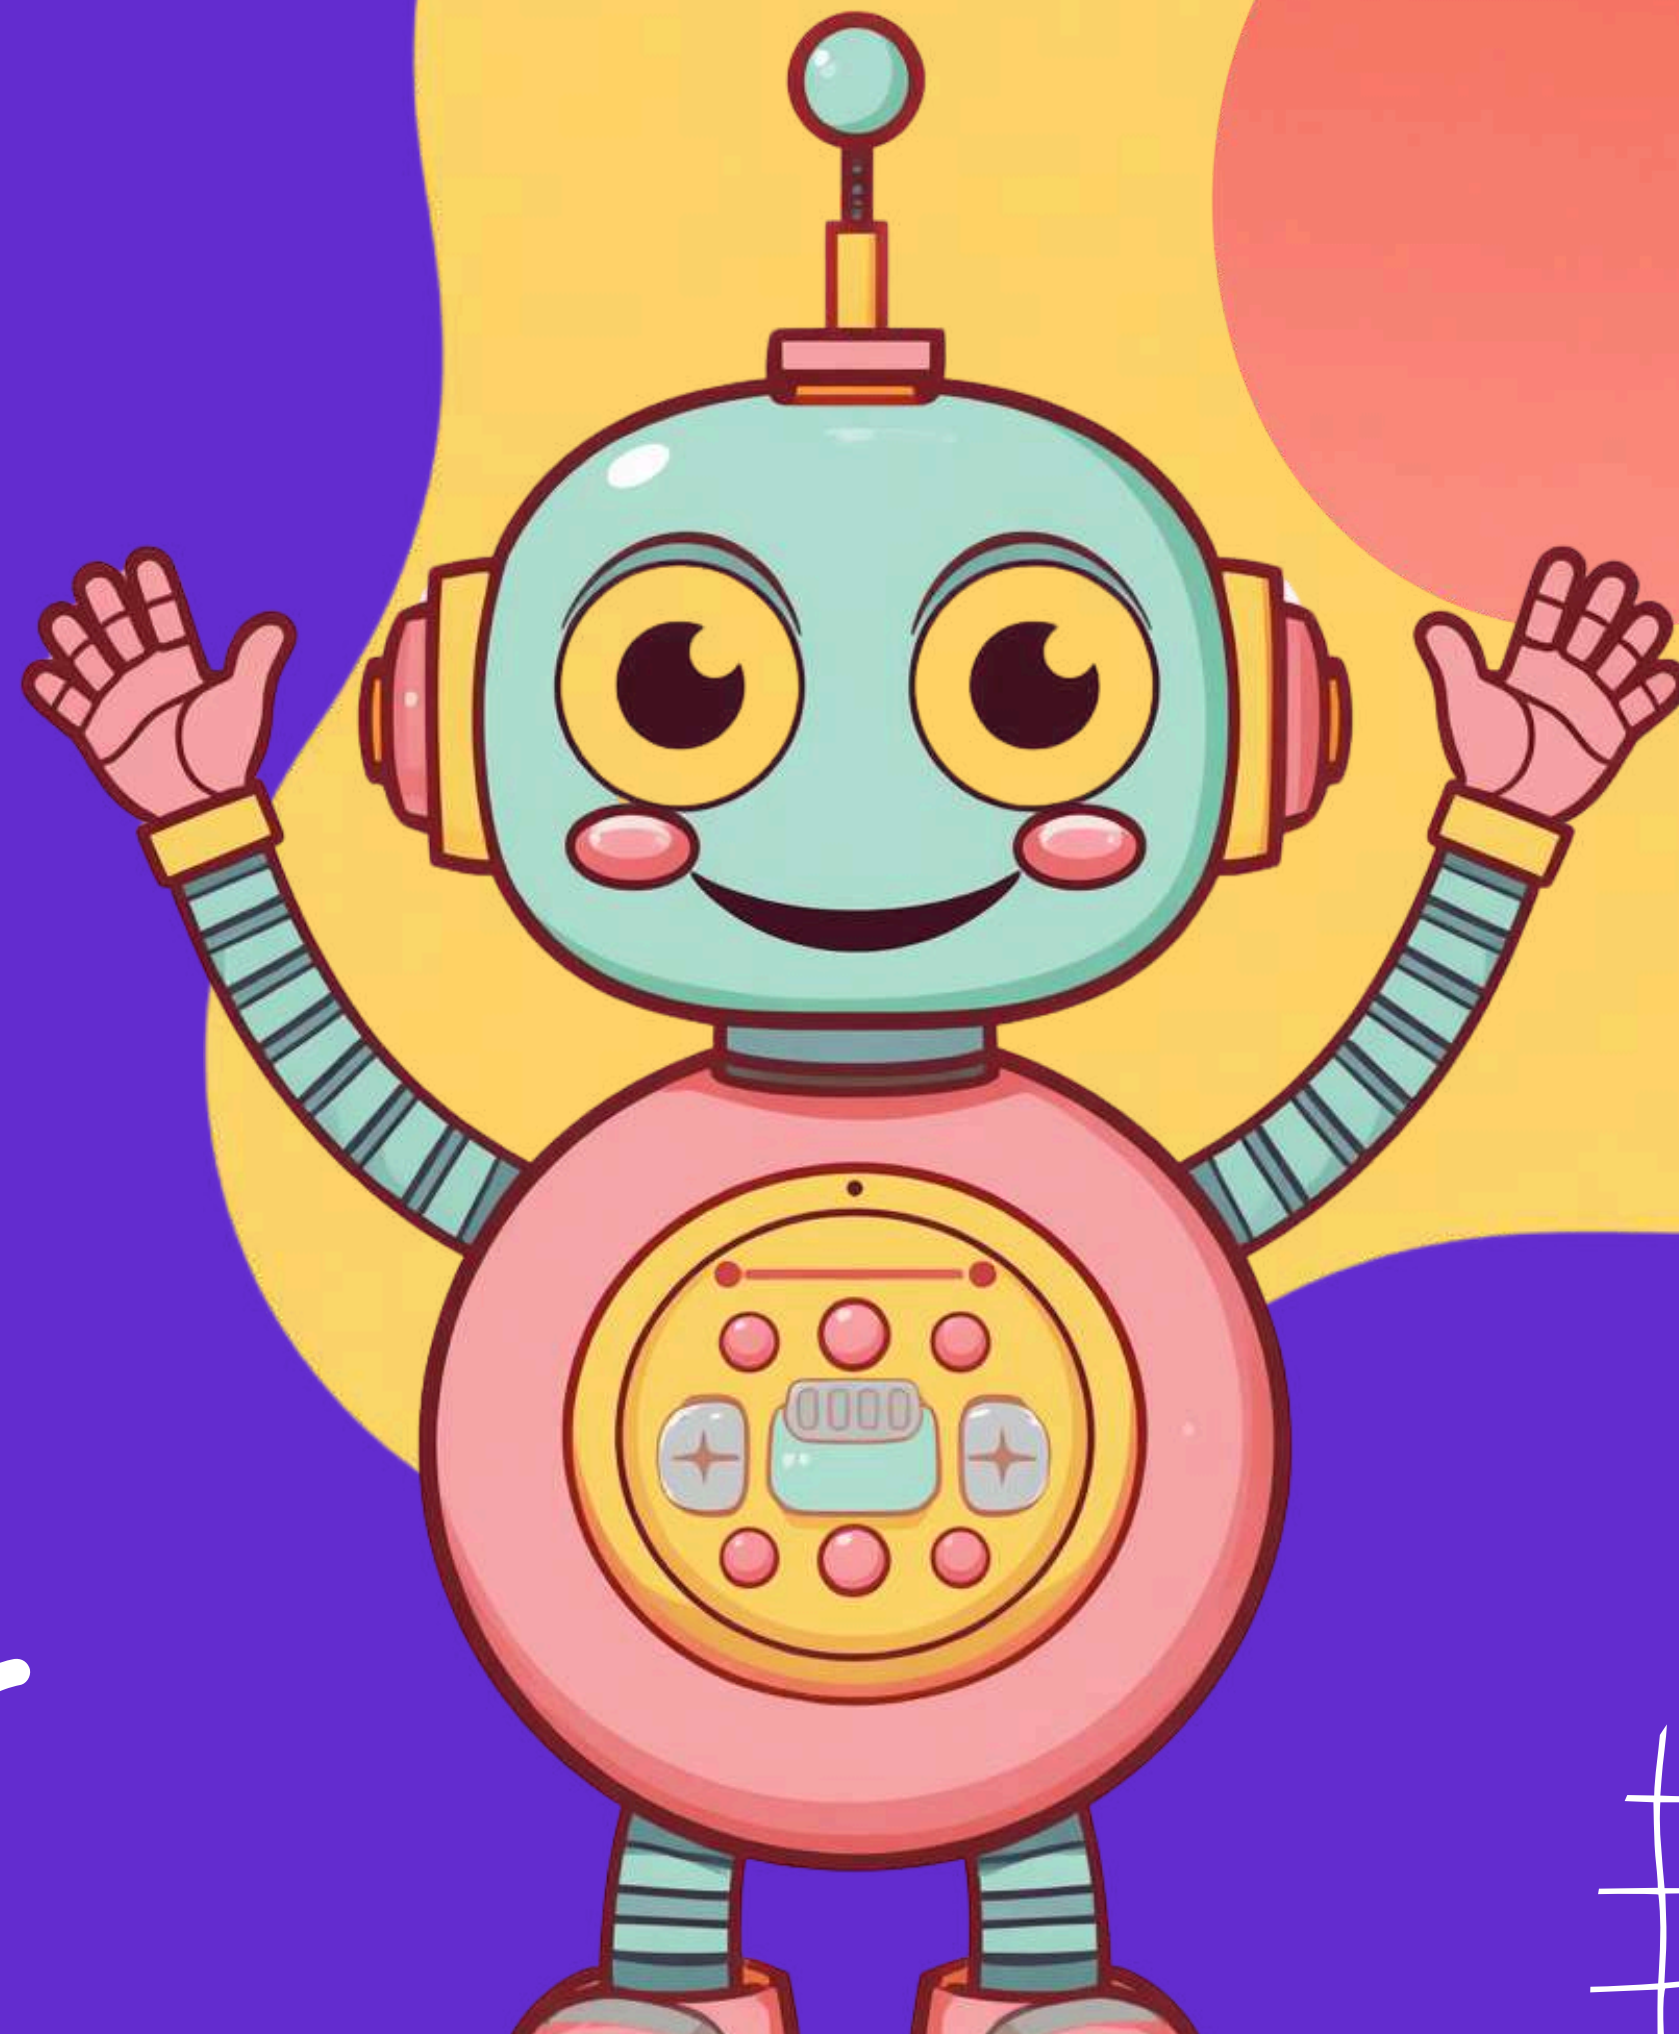

Can draw pictures and make art!

Can play fun games with you!

SHOW YOUR ROBOT!

Look at what you created! Every robot is different and that is what makes yours so special. You used your imagination to design something amazing.

**Great job! Your robot is
unique and special.**

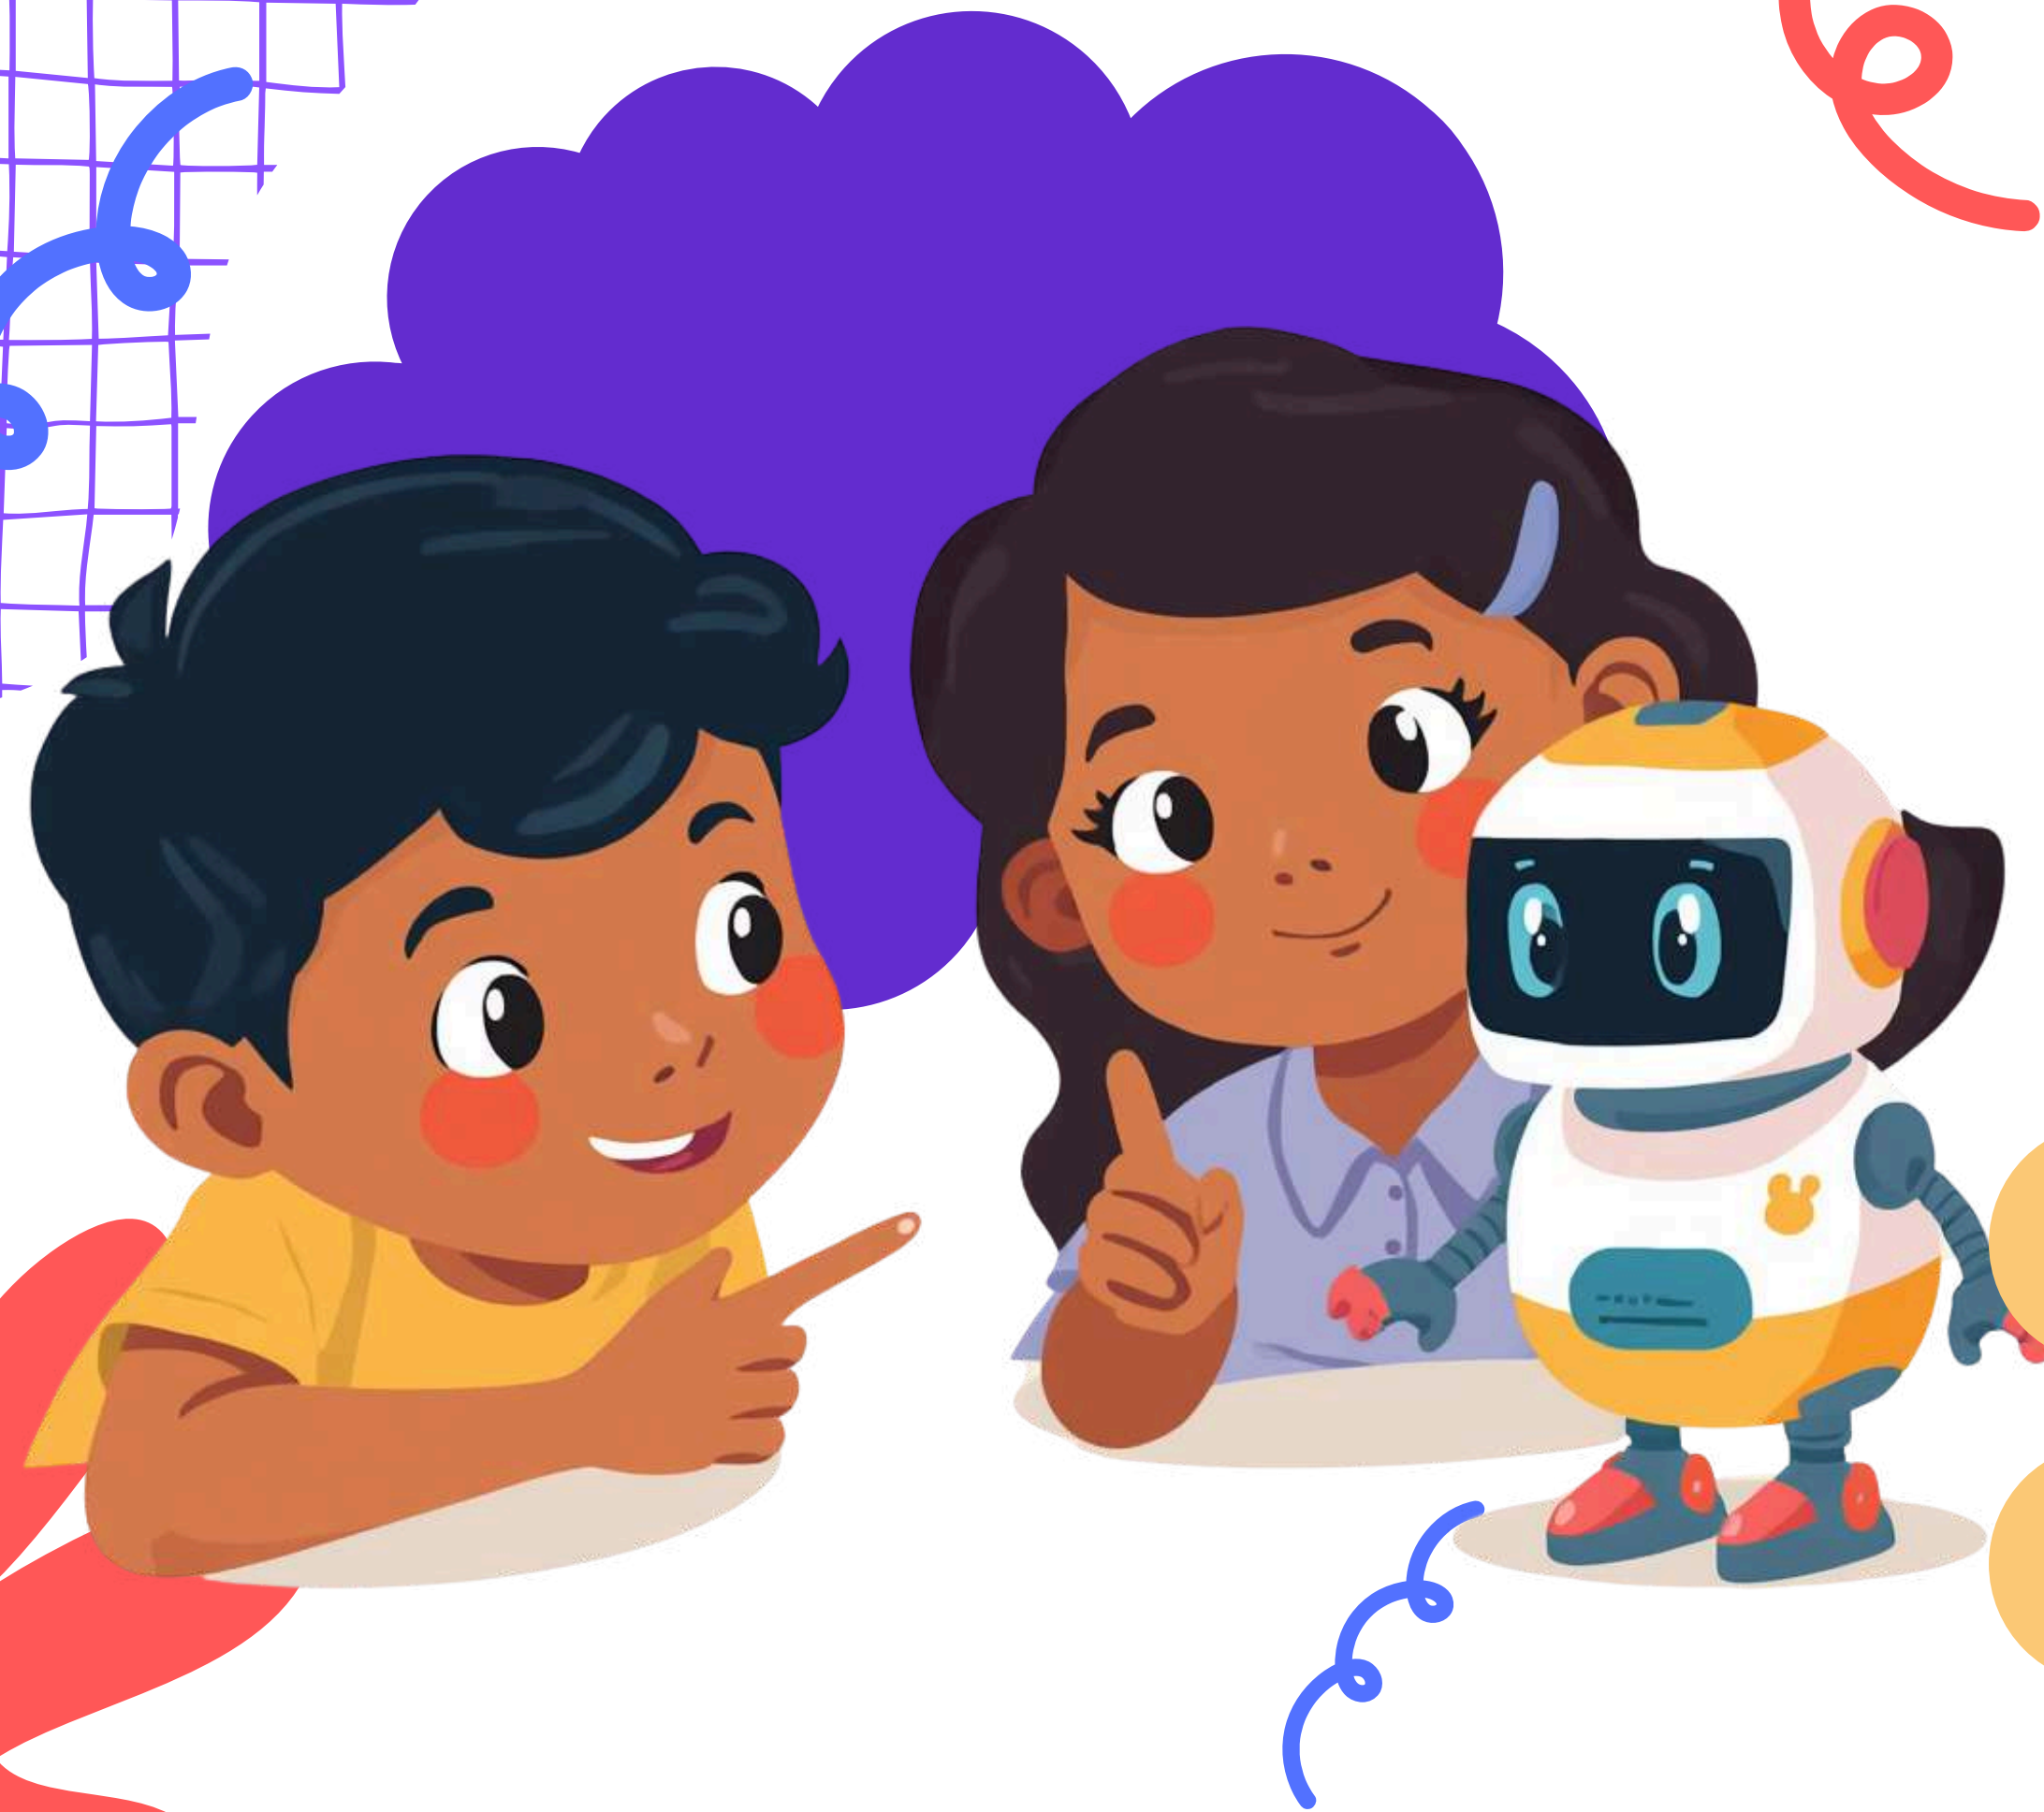

ROBOTS AROUND US!

Robots are already helping people every day! They work in hospitals, schools, and homes to make life easier and better for everyone.

Robots help doctors in hospitals and assist teachers in schools.

Robots also help at home by cleaning, cooking, and caring for people!

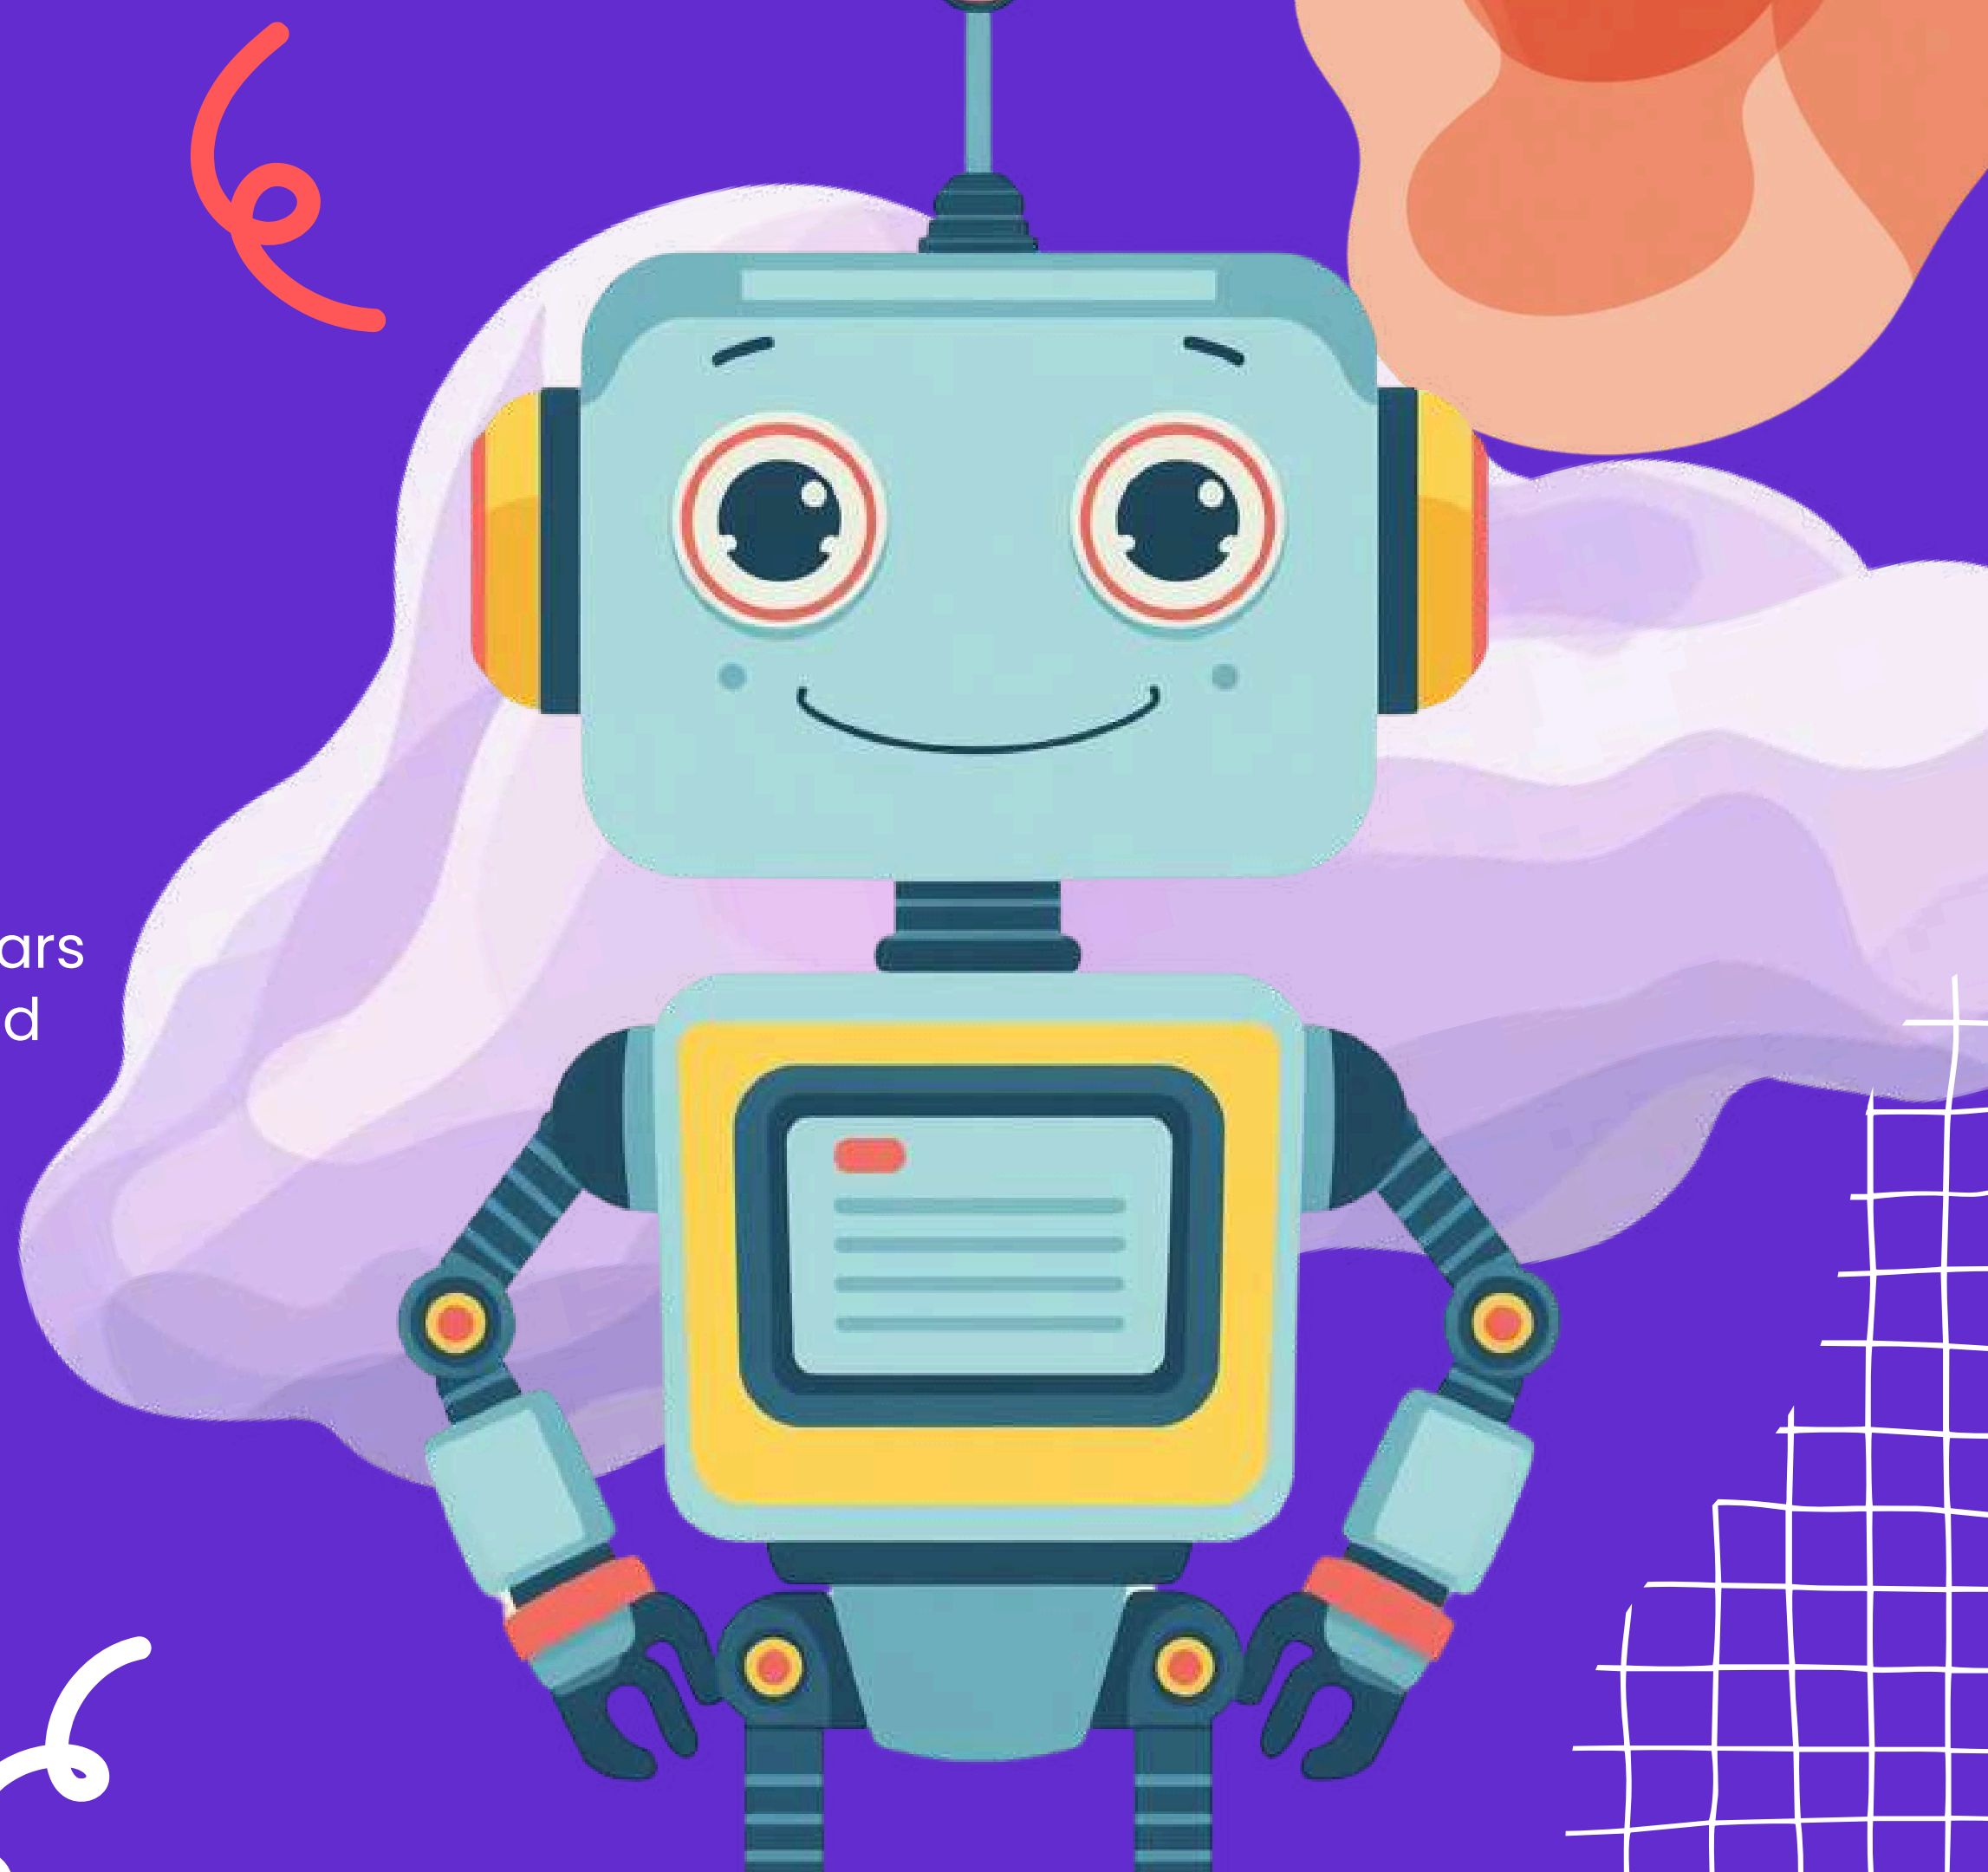

FUN ROBOT FACTS!

Did You Know?

The first robot was made over 90 years ago! Robots have grown smarter and more helpful every year since then.

Robots keep getting better and better every day!

TELL US ABOUT YOUR ROBOT!

What would your robot do? Think about it and share your ideas with your friends and class!

Describe your robot's special powers and abilities.

Share your robot design with a friend today!

YOUR ROBOT DESIGN JOURNEY!

Amazing work, robot designers! Let's look back at everything we explored and created together on this exciting journey!

We learned what robots are and how they help people.

We explored robot parts like heads, arms, and wheels.

We designed our very own unique robots!

We saw how robots help us every day!

THANK YOU!

You Are Amazing Robot Designers!

You learned what robots are, explored robot parts, and designed your very own robot. Keep dreaming big and creating wonderful things every day!

**Keep dreaming and designing
your amazing robots!**
