Recap: What Can Computers Do?

A Day Without Computers!

Oh No! What Happened?

Alex woke up to find all computers went on holiday! His phone won't turn on, TV is blank, and the ATM won't give money. What problems is Alex facing? Why?

Definition

What Is a Computer?

Input • Process • Output • Storage

A computer is an electronic device that takes in data (input), processes it using instructions (programs), and gives us useful results (output). It can also store information for later use. Examples: laptops, tablets, smartphones, and even smartwatches are all computers!

Recap: What Can Computers Do?

Computers Are Everywhere!

➔ Did You Know?

Many devices around us ARE computers — even if they don't look like big desktop machines! Smartphones, tablets, ATMs, smart TVs, and railway ticket machines all have computers inside!

Recap: What Can Computers Do?
— Super Power 1 of 4

Super Power 1 – CALCULATE!

Computers do maths very fast — much faster than us! When Mom orders groceries online, the app adds up prices in one second! A calculator in your phone can solve 1,00,000 sums before you blink. Banks use computers to count millions of transactions every day.

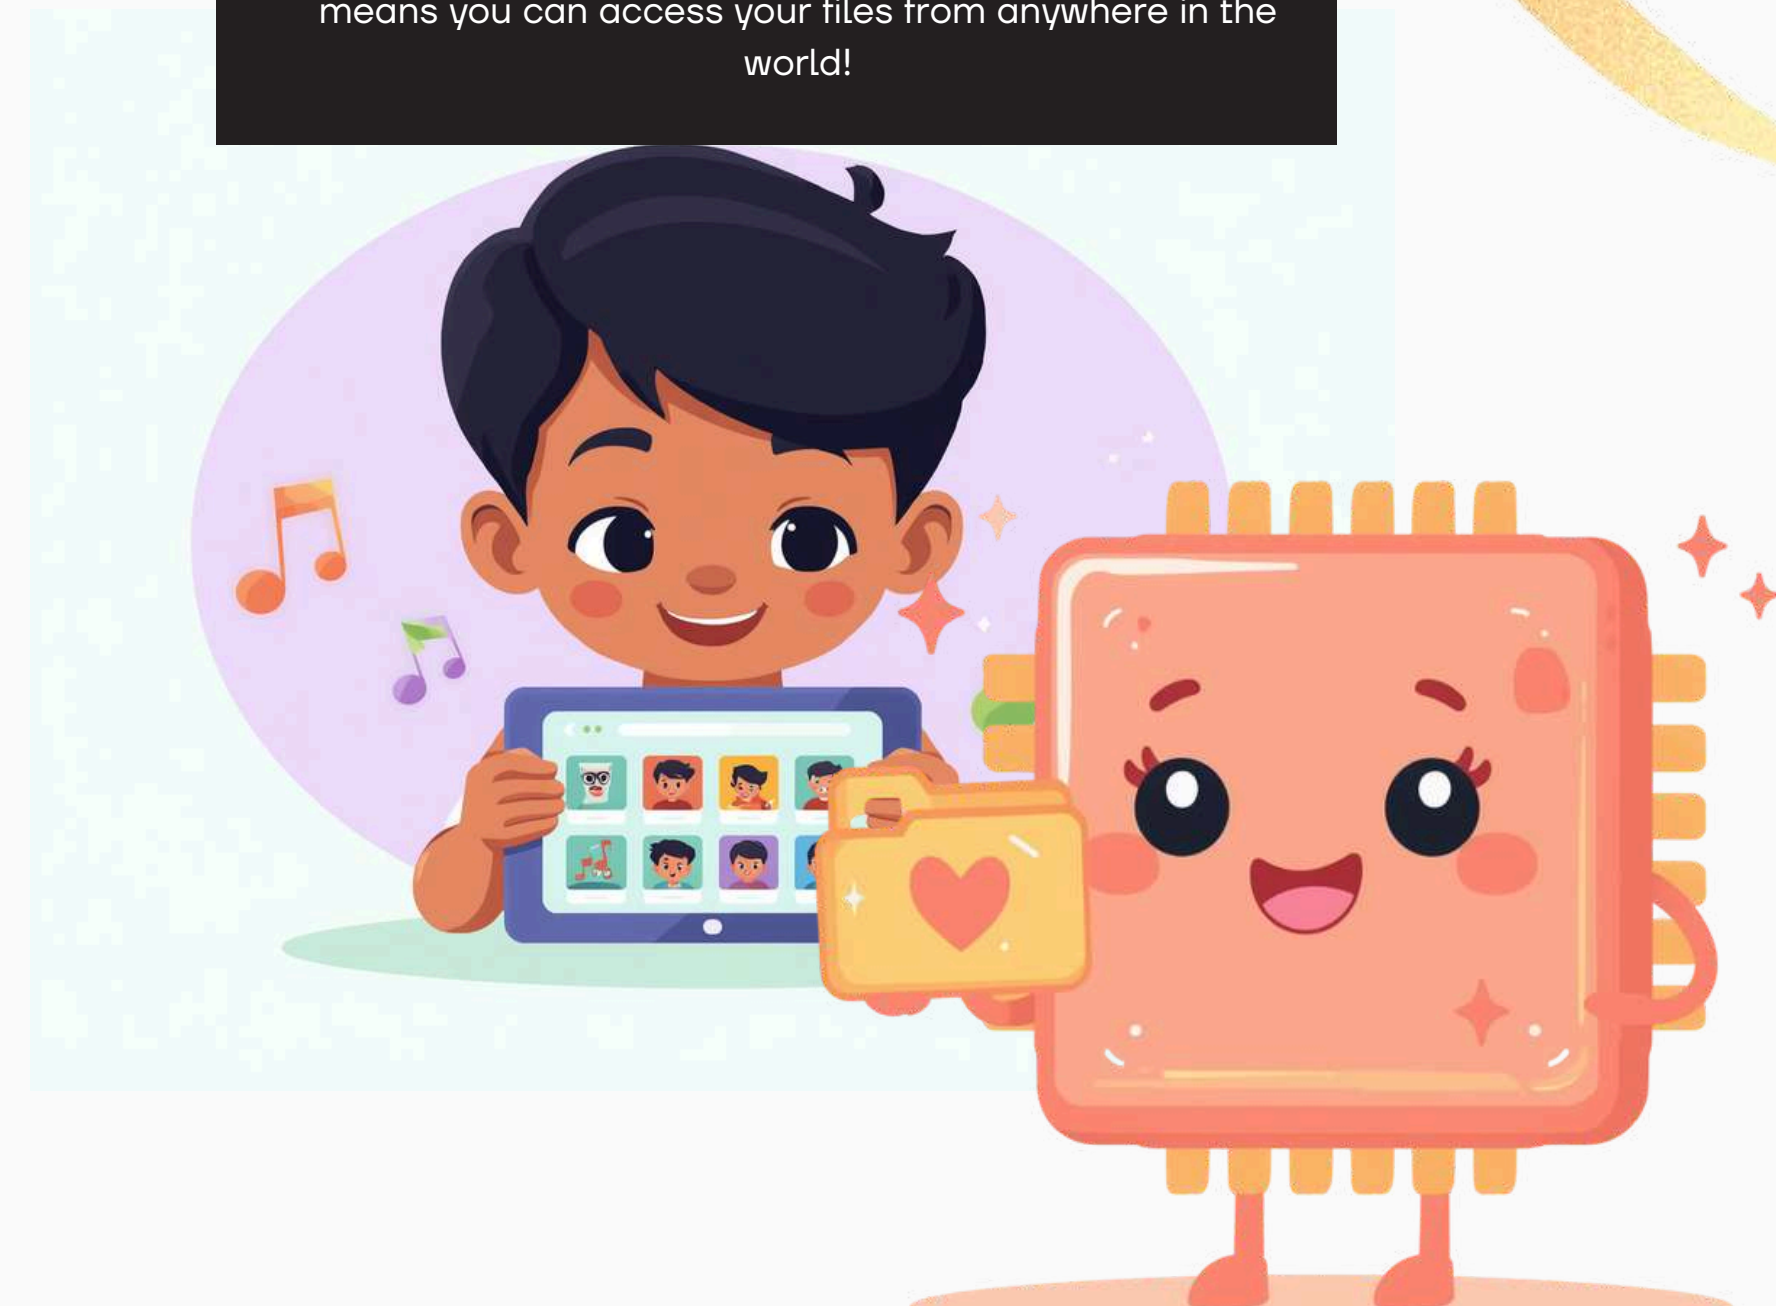

Recap: What Can Computers Do?

Super Power 2 – STORE!

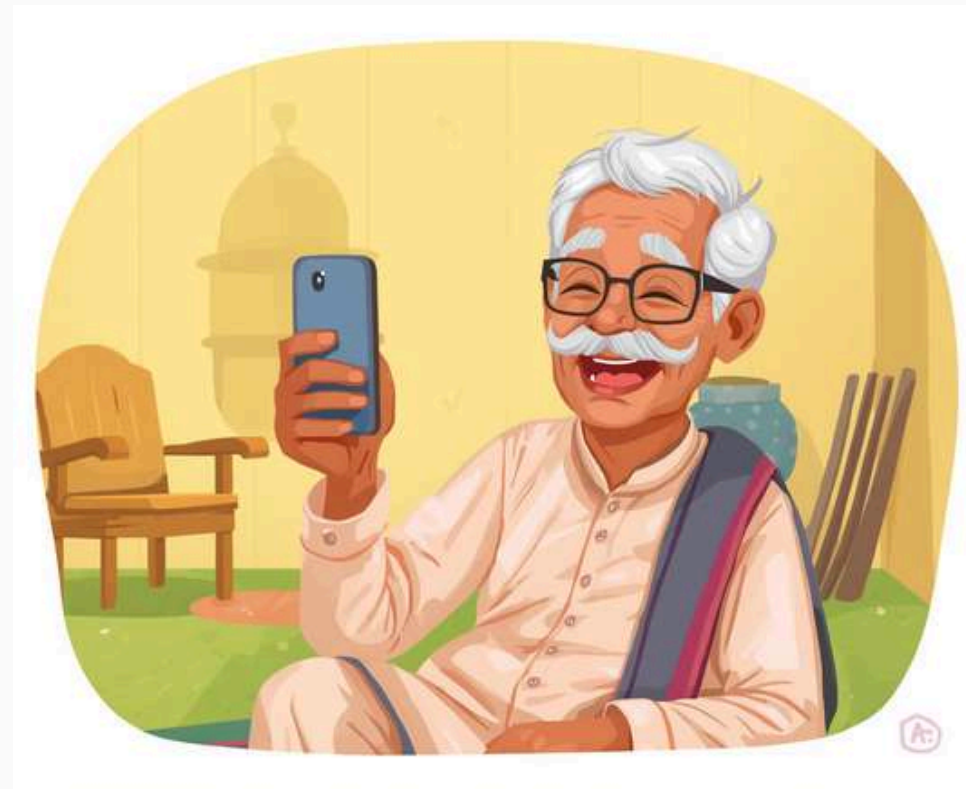

Computers Remember Everything!

Computers can remember lots of things — photos, songs, books — and keep them safe forever! Your school computer stores thousands of files. A single USB drive can hold 10,000 photos. Cloud storage means you can access your files from anywhere in the world!

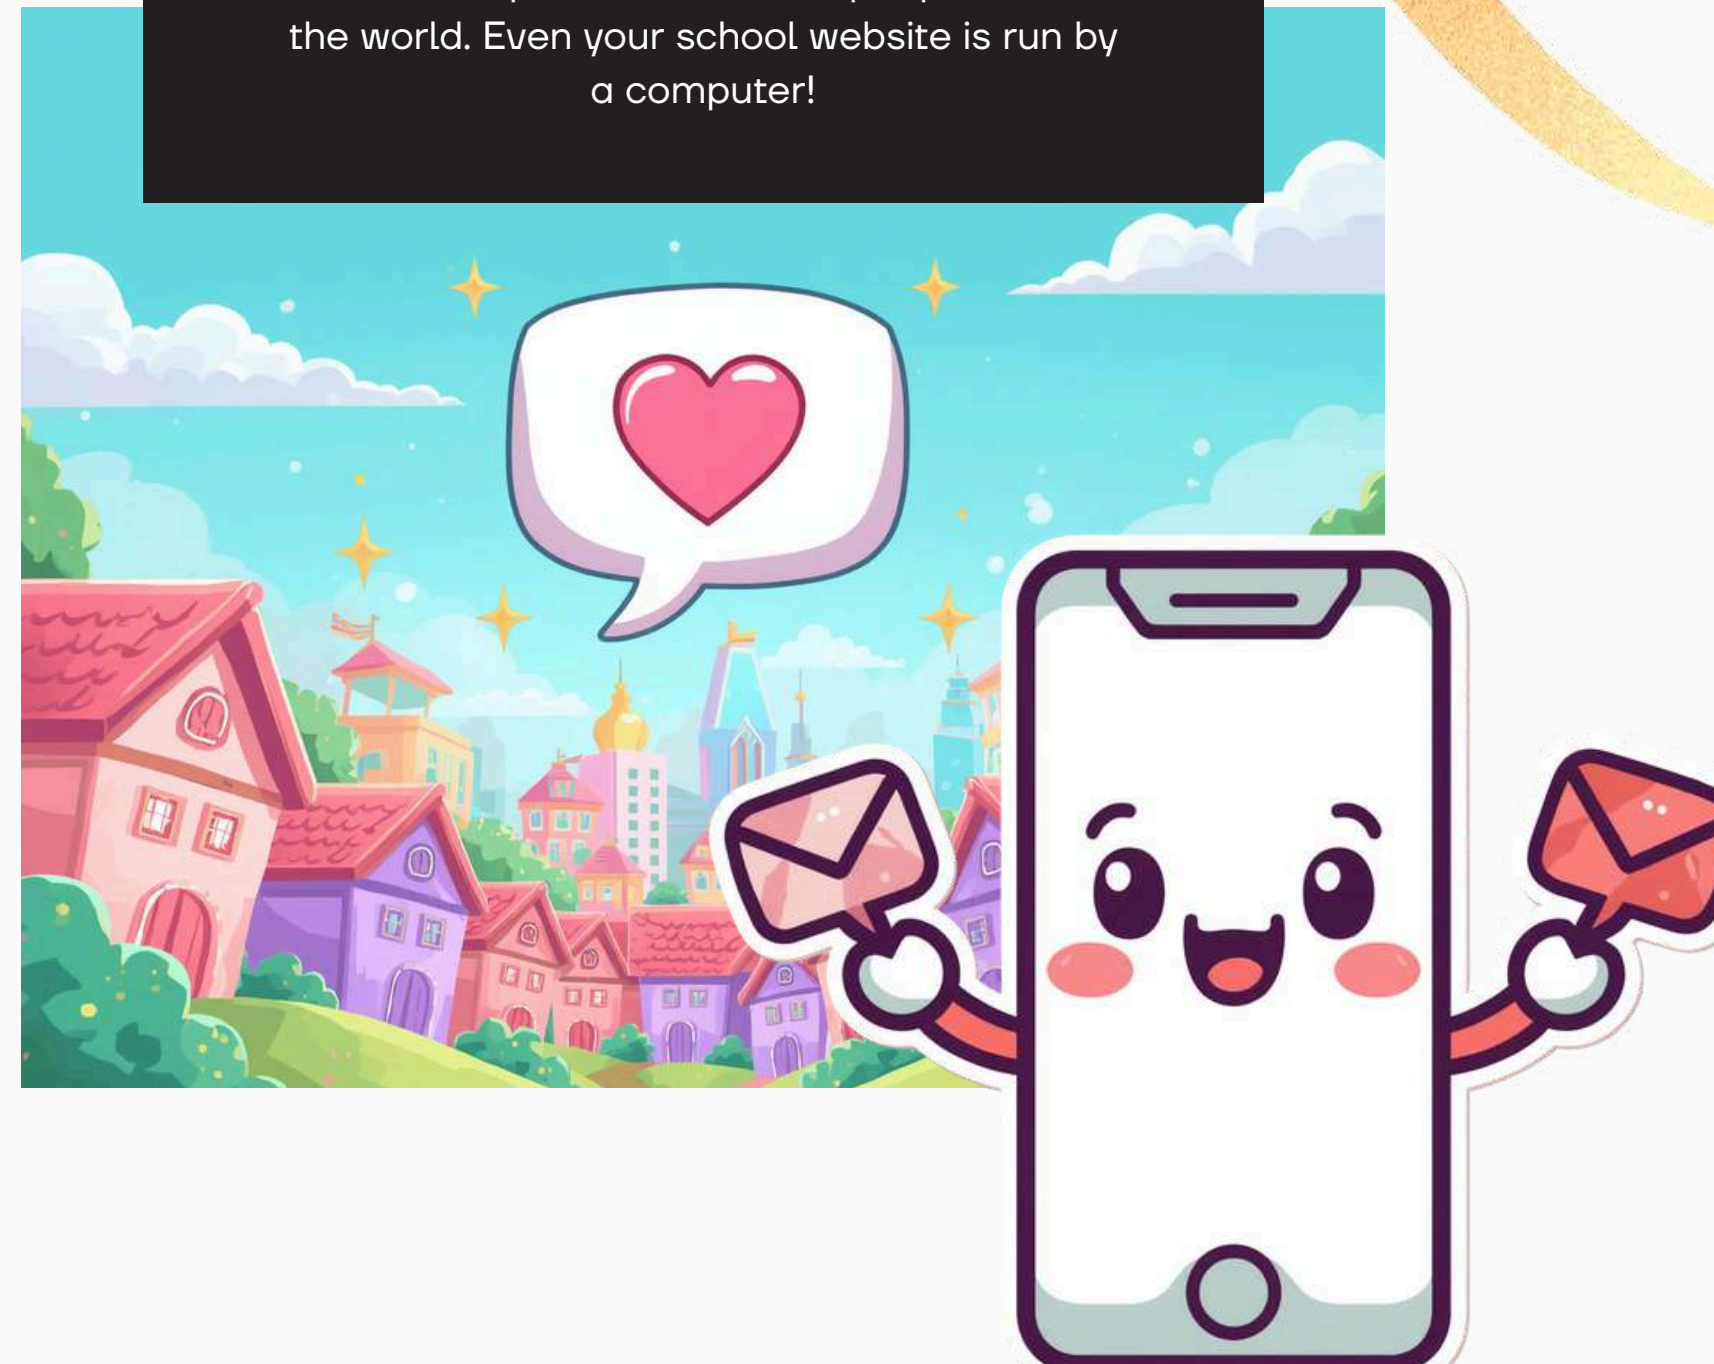

COMMUNICATE! ↗

Send Messages Far Away!

Computers help us send messages, make calls, and share things with people far away instantly! Email, video calls, and social media all use computers to connect people across the world. Even your school website is run by a computer!

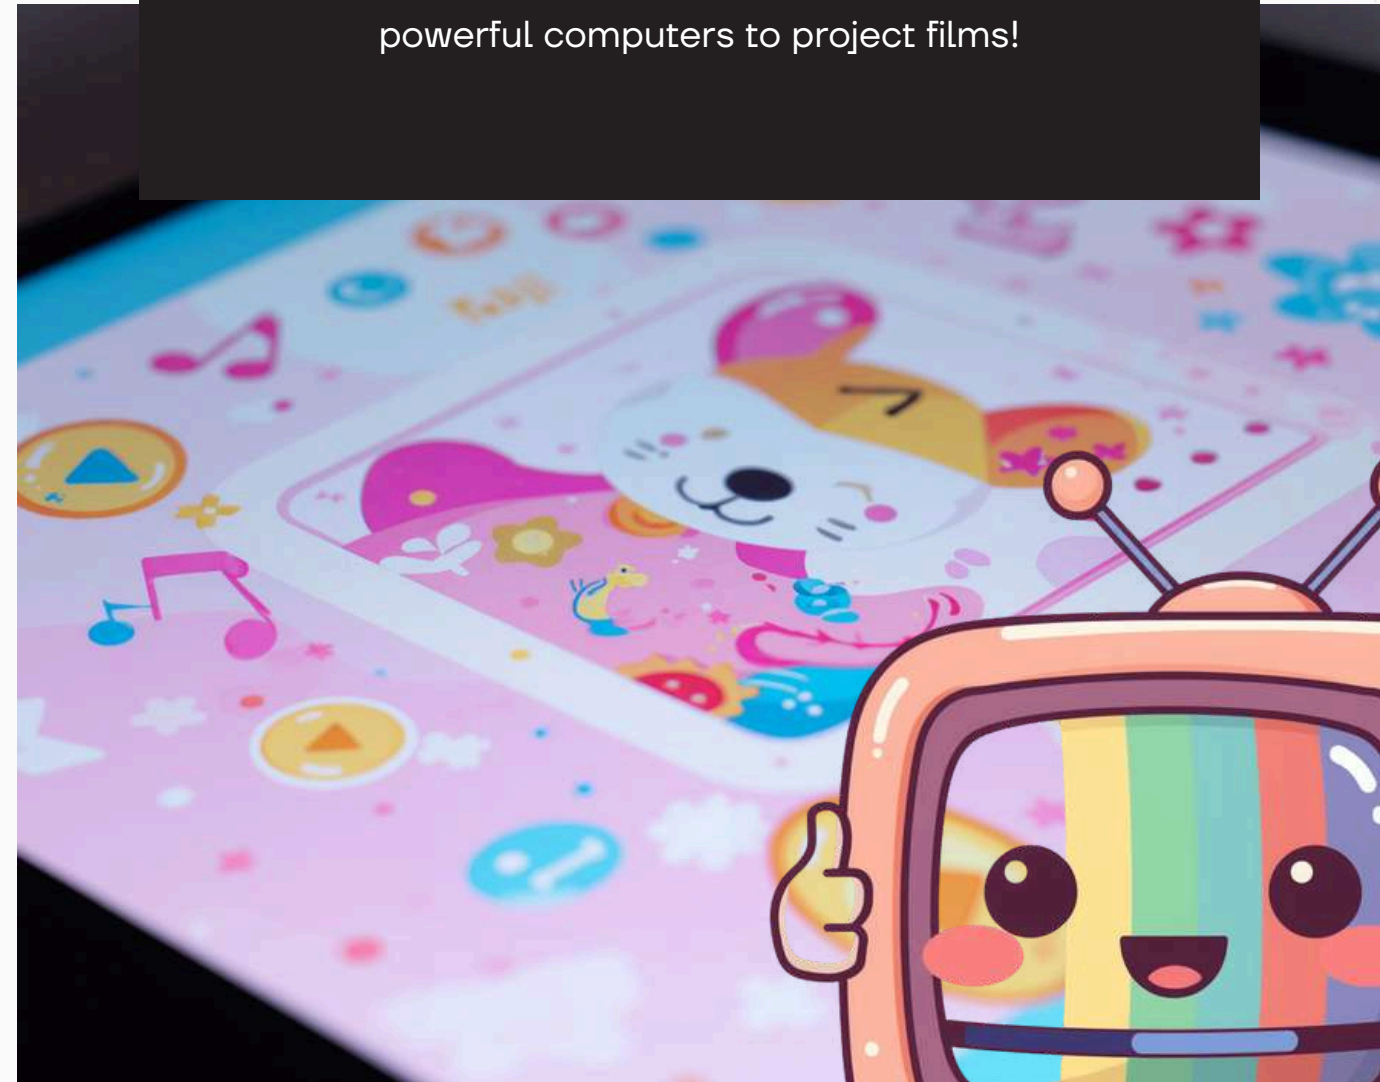

Recap: What Can Computers Do?

Super Power 4 – DISPLAY & PLAY!

Screens Come Alive!

Computers show pictures, play music, run videos, and make games come alive on screen! Your TV, phone, and tablet all use computers to display colourful images and smooth animations. Even movie theatres use powerful computers to project films!

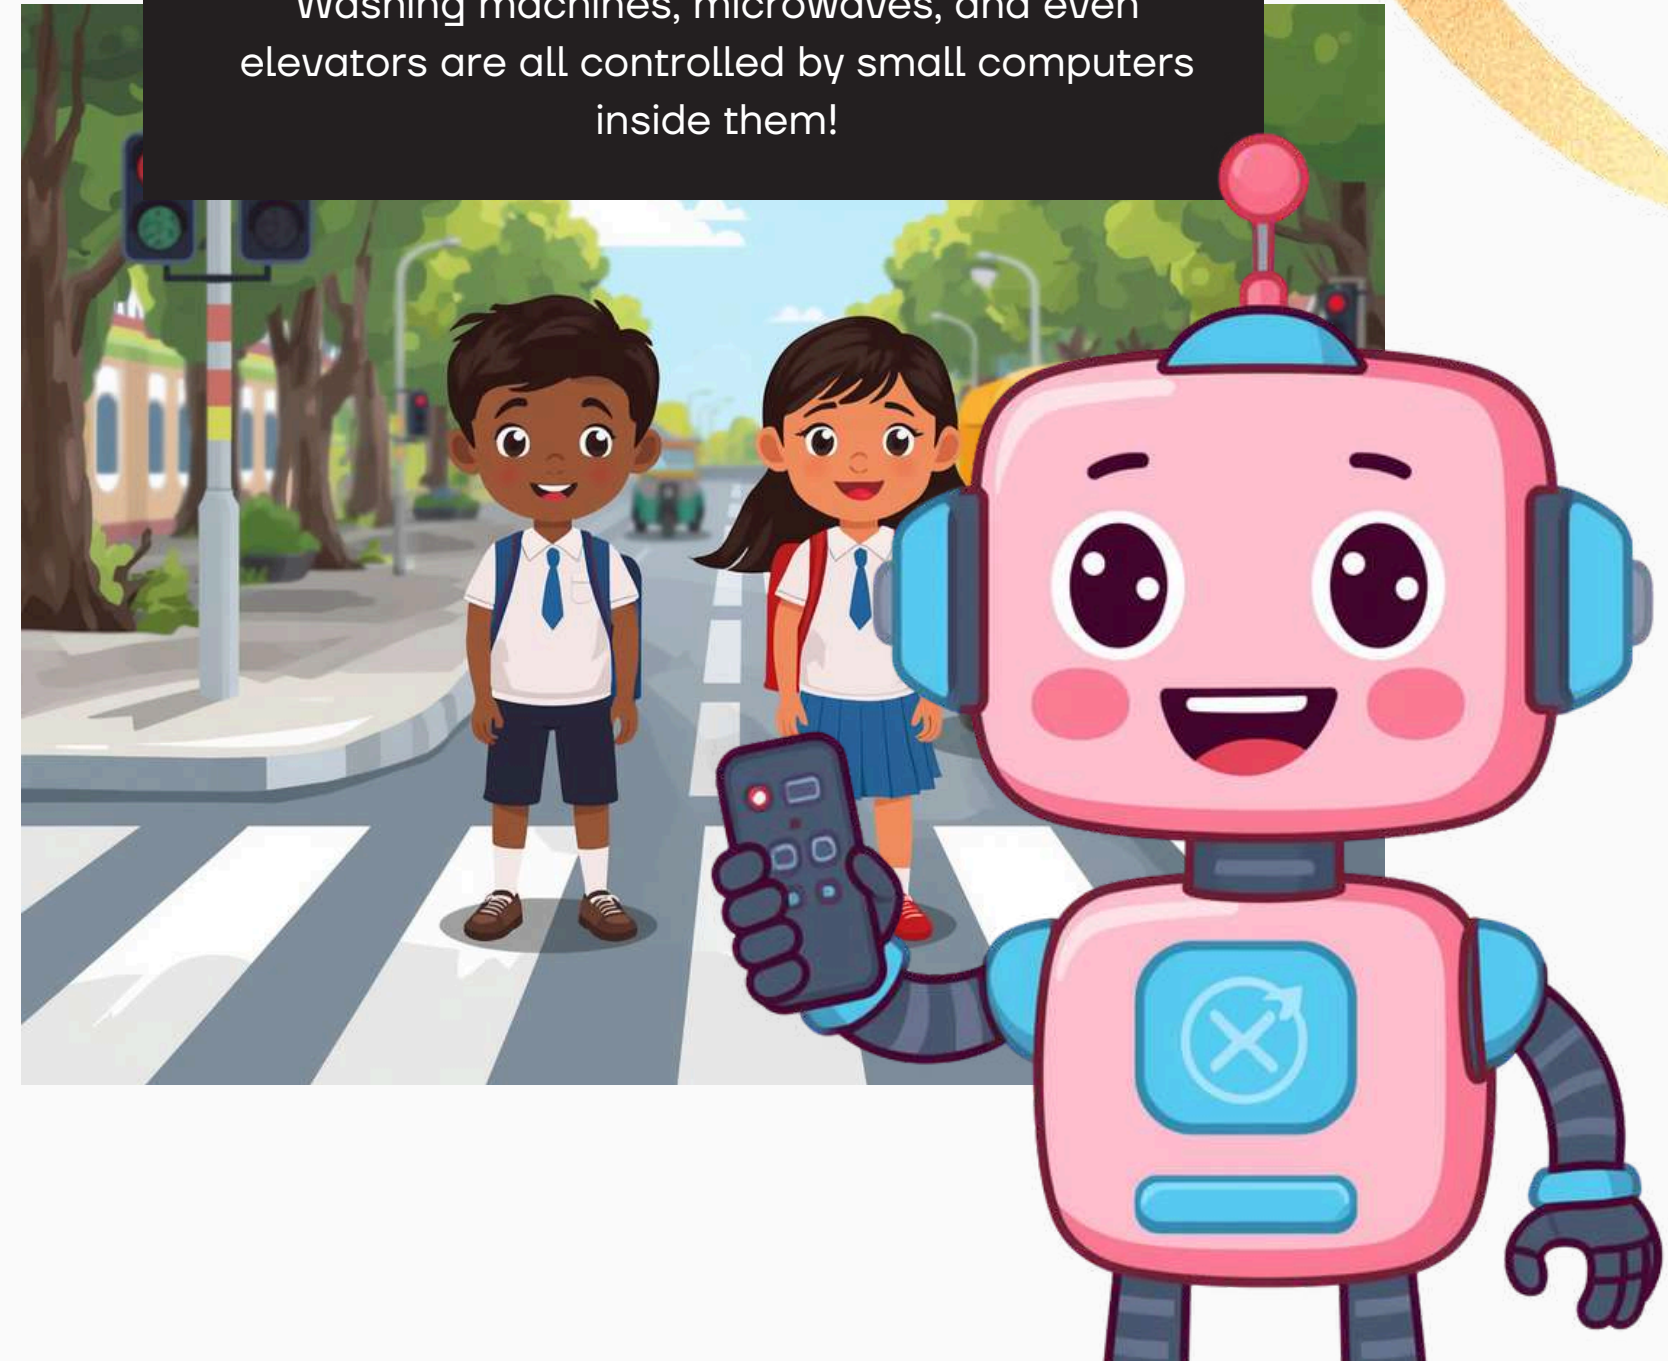

Recap: What Can Computers Do?

Super Power 5 ↗ – CONTROL!

Computers Control Machines!

Computers can control other machines! The traffic signal near your school changes colors because a tiny computer tells it when to change. Washing machines, microwaves, and even elevators are all controlled by small computers inside them!

Interactive Quiz Time!

Spot the Computer!

Which of these are computers?

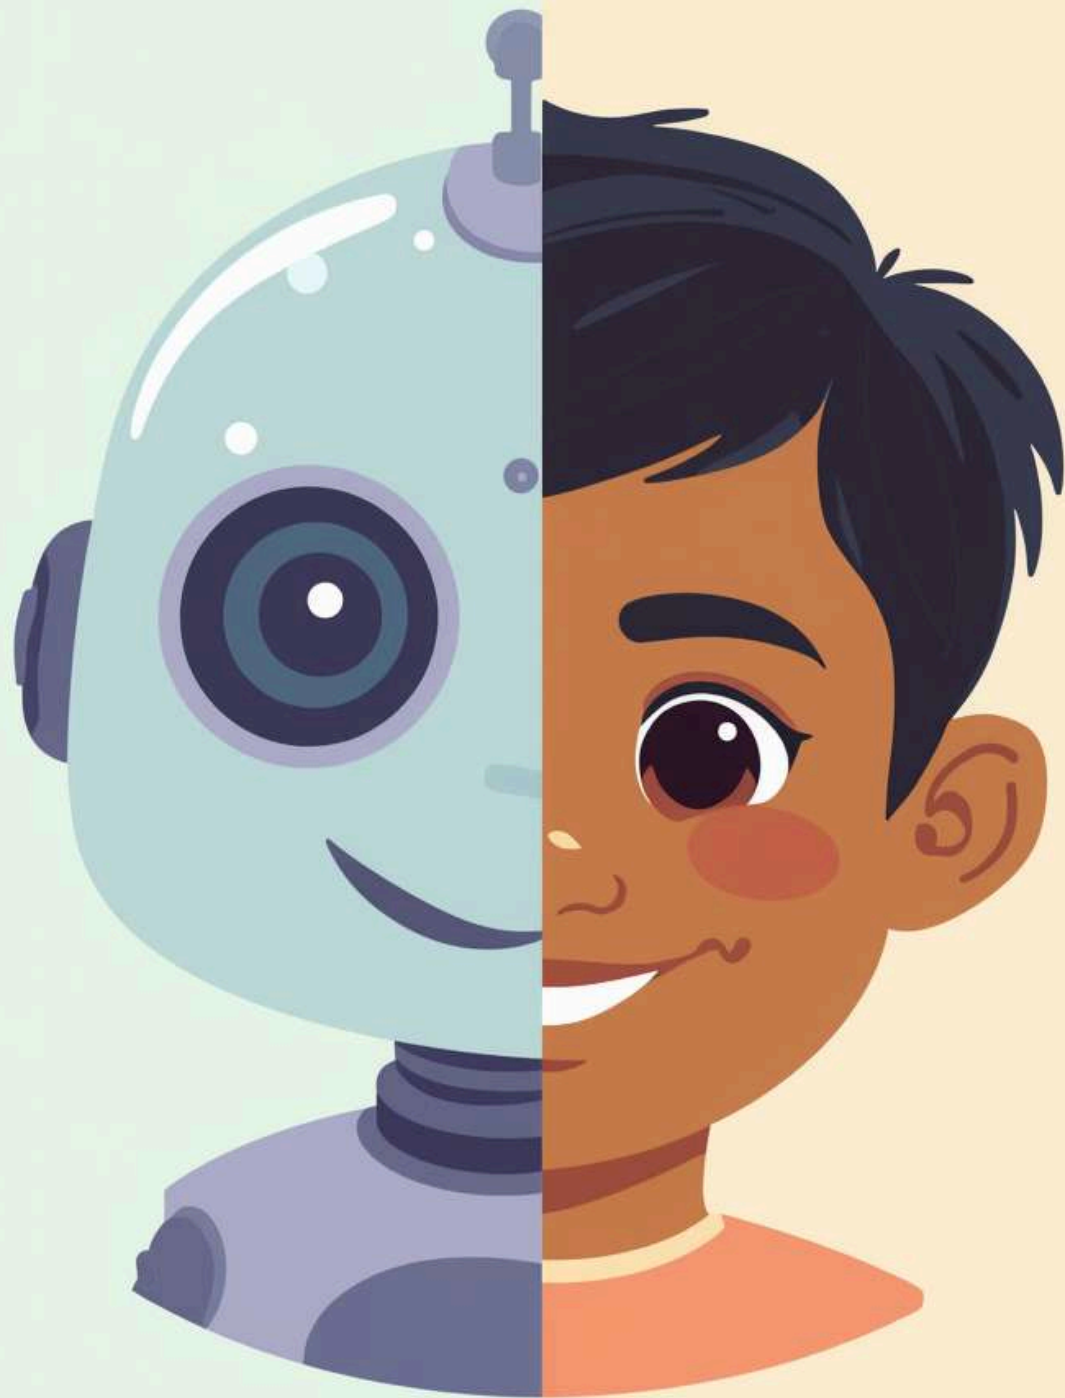

✓ Smartphone ✓ Tablet ✓ ATM ✓ Smart TV
Bicycle Lunch box Notebook Baseball bat

that are Computers

What are NOT computers

Recap: What Can Computers Do?

But Wait – What CAN'T Computers Do?

Things Only YOU Can Do!

Computers are super powerful but not magic! They cannot feel emotions, taste food, smell flowers, give hugs, or make decisions on their own. There are some special things only YOU can do — and that makes humans amazing!

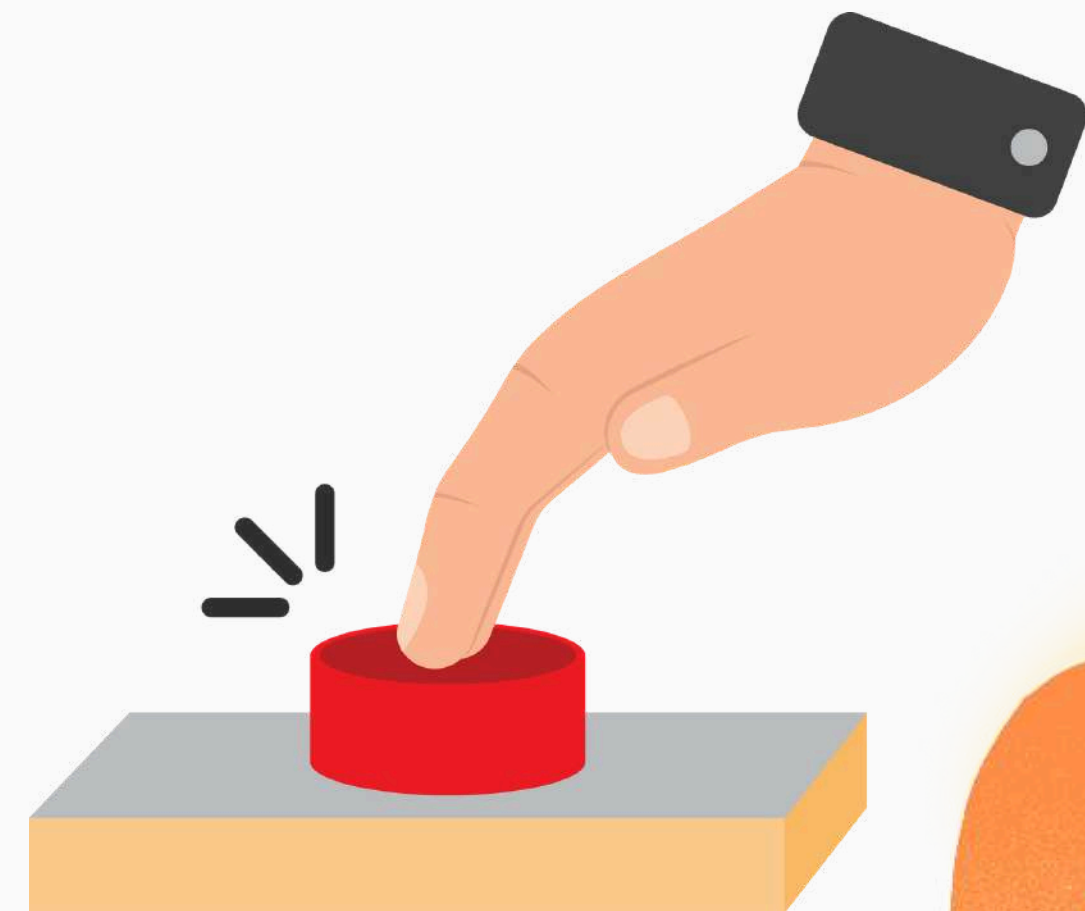

**Without Us, Computers
Are Useless!
Computers
Need
Humans!**

Why Computers Need Us

- Computers cannot turn ON by themselves — humans press the button!
- They cannot think of new ideas or be creative
- They only follow instructions (programs) written by humans
- If no one gives commands, a computer just sits and does nothing
- Humans fix computers when they break or get a virus
- Computers cannot learn right from wrong — humans teach them rules

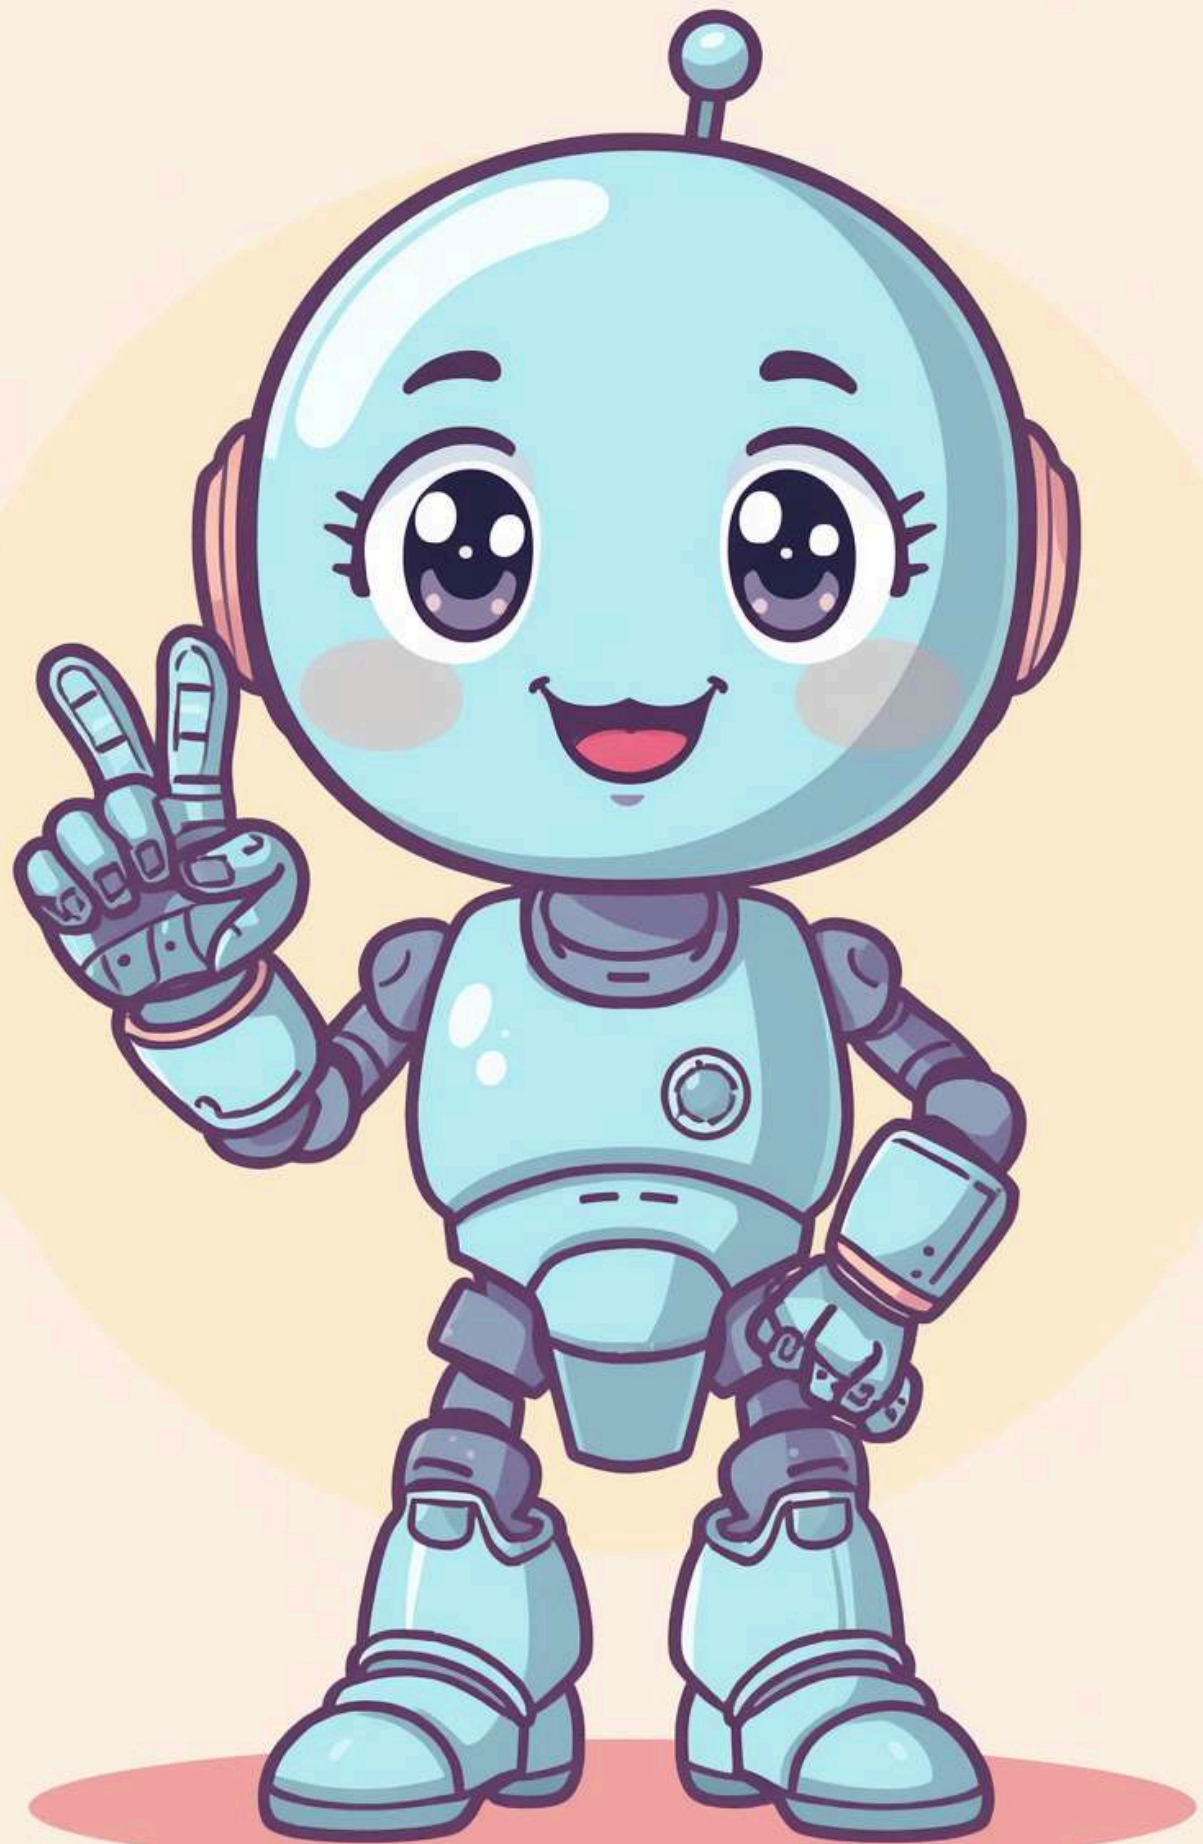

Recap: What Can Computers Do?

Can a Computer Do This? YES or NO!

→ Quick Quiz Time!

1. Add $100 + 200$ very fast → YES ✓
2. Feel hungry after lunch → NO ✗
3. Store 500 photos → YES ✓
4. Smell a mango → NO ✗
5. Play a song → YES ✓
6. Give someone a hug → NO ✗
7. Send a message to a friend → YES ✓
8. Decide what game to play on its own → NO ✗

Recap: What Can Computers Do?

Alex's 3 Big Ideas!

Remember These Important Points!

1. A computer is a smart machine that follows instructions
2. Computers can calculate, store, communicate, play, and control
3. Computers need humans – they cannot feel, smell, or decide alone!

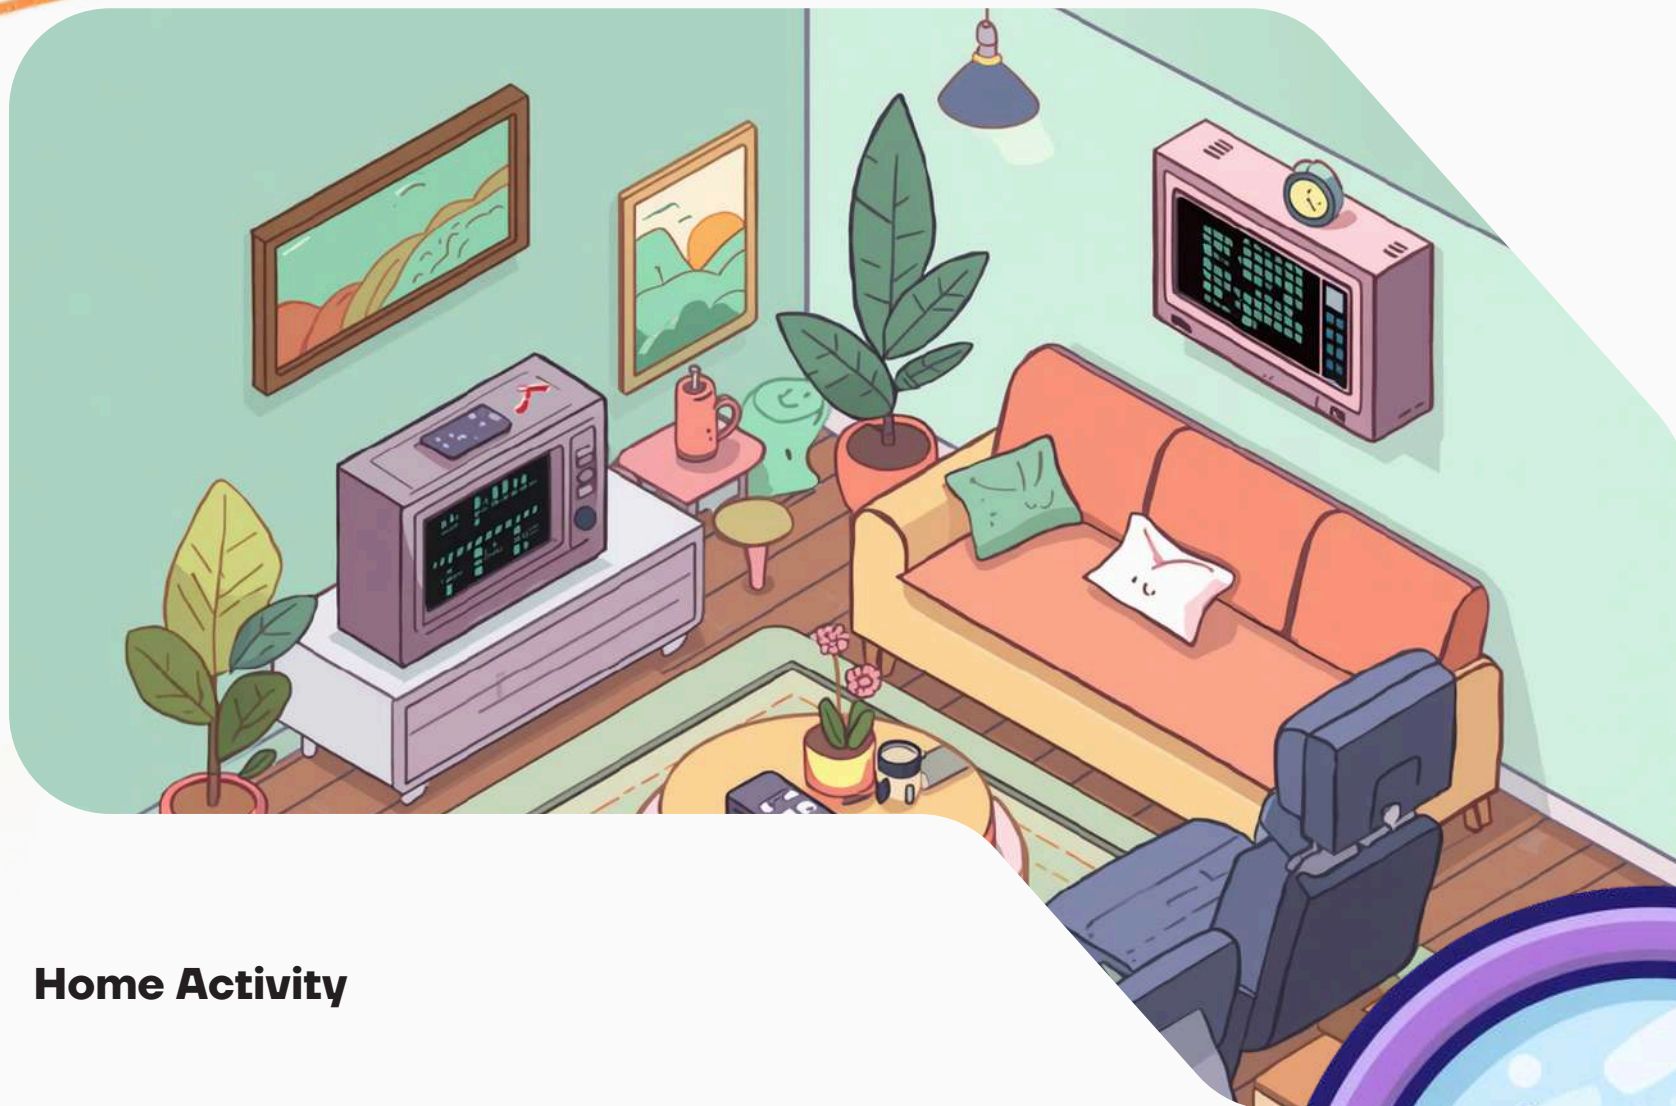

Recap: What Can Computers Do?

New Words We Learned Today!

Vocabulary Cards

Computer: A smart machine that follows instructions
Calculate: Do maths very fast
Store: Remember and keep information safe
Communicate: Send messages far away
Display: Show pictures and videos on screen

Hint: Check the TV, Microwave, or Car!

Tonight, find ONE computer hiding in your home you never noticed before! Tell your teacher or parent what it does tomorrow.

Home Activity

Today's Fun Challenge!

Congratulations!

You Did It!

➔ **Amazing Work!**

You've earned the "Computer Explorer" badge! You now know what computers can do!
