

My Weather App

HTML Coding Project | Planrs Academy Grade 1

1. Welcome to Weather Coding!

Good Morning, India! [cite: 314] Have you ever looked outside and wondered, "Is it hot, cold, or rainy today?" [cite: 315] We use the weather to decide what to wear and what to do [cite: 315]. Today, we are going to build our own **Weather App** using a secret language called **HTML**! [cite: 312]

2. What is HTML?

The Web Tiffin Box!

HTML tags are just like **Tiffin Box containers** [cite: 318, 319]. Just as you put your roti, sabzi, and dal into different boxes to keep them neat, we use HTML tags to hold different parts of our website [cite: 319].

3. Meet Our Coding Tags

The Big Title Tag

When you read a newspaper like *The Times of India*, the most important news has the biggest text [cite: 322]. In HTML, we use a special tag to make a **Big Title** [cite: 320].

- Normal text looks like: weather report [cite: 321]
- With the tag, it becomes: **WEATHER REPORT** [cite: 321]

The Picture Tag

We can use tags to add pictures to our app [cite: 327]. Think of these like the signs at a railway station that use pictures to show you where to go [cite: 327, 330]. For our app, we will use pictures to show the weather! [cite: 329]

[Image of weather icons: sun, cloud with rain, cloud with sun]

4. The Secret of Variable Data

The weather changes every single day, but our **app layout stays the same!** [cite: 332, 333, 334].

Think about your tiffin box again. The box stays the same size every day, but the food your mother puts inside it changes daily! [cite: 335, 336] That is exactly how our website works with "Variable Data." [cite: 332]

5. Project: Build Your 3-Day Forecast

Now it's your turn! You will type or drag-and-drop tags to build a forecast for three different days [cite: 339, 340].

Day 1: Rainy Day

Use your tags to show a rainy morning [cite: 339, 340].

Day 2: Sunny Day

Add a bright sun to your forecast [cite: 345].

Day 3: Hot Day

Complete your app with a very hot day [cite: 346, 347].

6. Personalize with Local Snacks!

Let's make our app even more fun by connecting the weather with delicious Indian treats [cite: 349, 350]!

Rainy Weather: **Pakor**as & Tea [cite: 352]

Sunshine: **Lemon Water** [cite: 353]

Cold Weather: **Ginger Tea** [cite: 354]

Hot Wind (Loo): **Coconut Water** [cite: 355, 356]

7. Help Aarav Decide!

Aarav wants to play cricket. Look at the weather app you built—should he go out or stay in? [cite: 357]

[Image of a boy holding a tablet showing a rainy weather icon next to a cricket bat with a red 'X']

8. Share Your App!

Great job! You have learned how a weather app helps your friends get ready for the day [cite: 358, 359].

Now, go and show your amazing HTML project to your class and your family! [cite: 360]

THANK YOU! EVERYONE [cite: 361]
