

Namaste Explorers!

Welcome to Space Code Academy

Your mission: Build an interactive space scene
with HTML, CSS, and JavaScript!

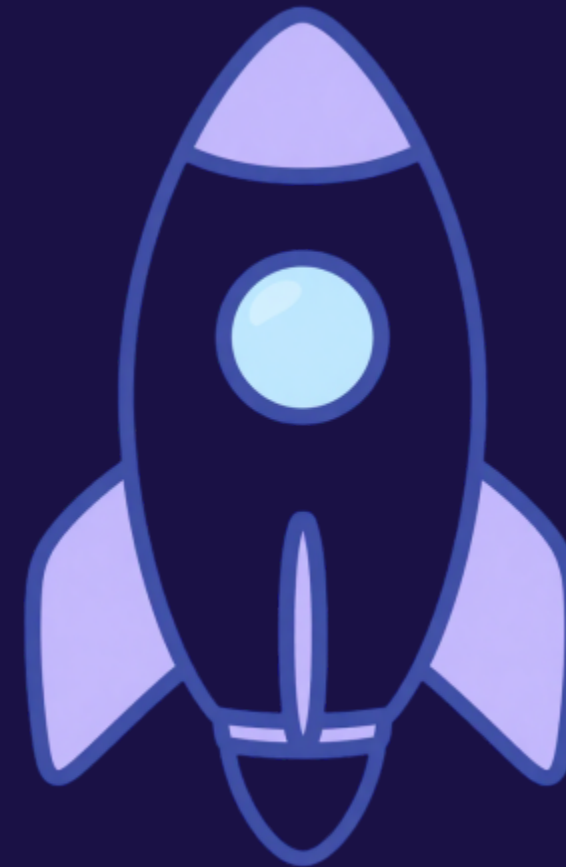

HTML: Your Spaceship Skeleton

HTML is the structure of your space scene.
It places the title, planets, and buttons on the page!

```
<h1>My Space Scene</h1>  
<button id="mars">Mars</button>  
<button id="jupiter">Jupiter</button>  
<div id="facts-panel"></div>
```

Code-Along Task:

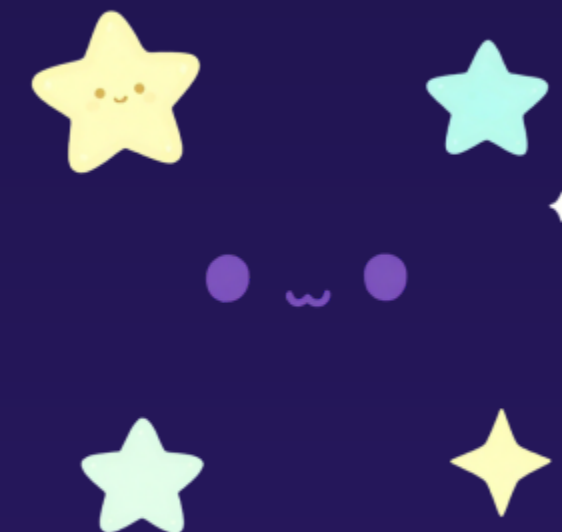

Type the HTML above into your editor.
Add a heading and two planet buttons!

CSS: Twinkling Stars & Nebula Colours

CSS makes your space scene beautiful!
Style the dark sky and animate the stars.

```
body {  
  background: #1a1445;  
}  
.star {  
  animation: twinkle 2s infinite;  
}  
@keyframes twinkle {  
  0%, 100% { opacity: 1; }  
  50% { opacity: 0.3; }  
}
```

Code-Along Task:

Add a dark background and make your stars
twinkle with a CSS animation!

JavaScript: Planet Buttons!

JavaScript makes things happen when you click!
Your buttons will reveal planet facts.

```
document.getElementById("mars")  
  .addEventListener("click", function() {  
    document.getElementById("facts-panel")  
      .textContent = "Mars is the Red Planet!";  
  });
```

Code-Along Task:

Add a click event to each planet button.
Show a fun fact when clicked!

Facts Panel + Quick Quiz!

When you click a planet, a facts panel appears!
Let's recap what each language does.

Fun Space Fact:

Jupiter is so big that 1,300 Earths could fit inside it!

Quick Quiz - Match the Language!

HTML = Structure (the skeleton)

CSS = Style (colours & animations)

JavaScript = Actions (clicks & events)

Mission Complete!

You built an interactive space scene!

Keep exploring, keep coding, and keep sharing your amazing space creations!

You are a Space Code Explorer!
