

AI & Internet: A Colorful Journey

Grade 2 Lesson Plan | PLANRS Academy

1. What is the Internet?

Imagine a world where you can talk to your Dadi in Rajasthan and see her smiling face even if she is far away! This happens because of the Internet.

The Internet: An invisible road or "network" that connects computers and phones all over the world!

Key Concept: The Railway Analogy

Just like **Indian Railways** trains run on tracks to carry people from Mumbai to Delhi, the Internet has **invisible tracks** for information. When you send a message, it zooms along these tracks super fast!

2. How Does It Travel?

The Internet isn't just magic; it uses physical tools and invisible waves:

- **Wires:** It travels through cables underground and even under the deep blue sea!
- **Wi-Fi:** It travels through the air as invisible signals.

New Word - Signal: *An invisible message that travels very fast, like a tiny letter zooming through the air!*

3. Devices We Use

Many "tools" help us use the Internet:

- **Mobile Phone:** The most common one we use at home.
- **Laptop/Tablet:** Used for school, learning, and playing games.
- **Smart TV:** To watch our favorite cartoons like Chhota Bheem.
- **Smartwatch:** A tiny computer on your wrist that can call your parents!

4. Fun with the Internet vs. Fun without It

WITH Internet	WITHOUT Internet
• Video calls with family • Watching YouTube videos • Ordering food on Swiggy • Searching for answers on Google	• Playing Ludo with family • Reading a storybook • Drawing and coloring • Playing Cricket outside

5. Mini Quiz: Test Your Knowledge

Q1: What is the Internet?

Ans: Invisible roads connecting devices.

Q2: Which activity needs the Internet?

Ans: Watching YouTube.

Q3: How can you talk to Dadi face-to-face from far away?

Ans: By making a Video Call.

Take-Home Task!

Ask your parents today: "**What are 3 things our family uses the Internet for?**"

Write them down and share them with the class tomorrow!
