

BUILD A DARK MODE TOGGLE! 🌙 ✨

Learn how apps like WhatsApp, YouTube & BYJU'S switch themes!

1. WHAT IS DARK MODE? 🌙

Have you ever used your phone in a dark room and felt the bright white screen hurt your eyes? **Dark mode** switches the bright background to black/dark gray with light text, making it super easy on your eyes and saving battery life!

💡 **Cool Fact:** On modern phone screens, dark pixels actually turn off to save battery!

2. THE 3 SUPERPOWERS OF WEB DEVELOPMENT ☕

Think of building a webpage like running a **Chai Stall** on the street:

Language	Chai Stall Analogy	What It Does On A Webpage
HTML	The Cart Structure	Builds the skeleton (headings, paragraphs, buttons)
CSS	Paint & Decorations	Adds style, colors, fonts, and dark mode themes!
JavaScript	The Chai Maker	Adds action! Makes things happen when you click buttons.

3. THE MAGIC BEHIND THE SWITCH ⚡

The Uniform Badge (CSS Class)

A CSS class is like a school badge. Put it on, and you follow special rules! We make a `.dark-mode` class in CSS that turns the background dark.

The Doorbell (EventListener)

JavaScript's `addEventListener()` listens for a click on your button like a doorbell waiting for a visitor!

🔧 **The Magic Line:** `document.body.classList.toggle("dark-mode");`

Like a fan switch: click once → dark mode turns **ON**. Click again → dark mode turns **OFF**!

4. CODE TIME! TYPE THESE 3 FILES 💻

File 1: index.html

```
<!DOCTYPE html>
<html>
<head>
  <title>My Cool Dark Mode Page</title>
  <link rel="stylesheet" href="style.css">
</head>
<body>
  <h1>Hello, Young Coder! 🙌</h1>
  <p>Click the button below to switch themes!</p>
  <button id="toggle-btn">🌙 Toggle Dark Mode</button>
  <script src="script.js"></script>
```

```
</body>
</html>
```

File 2: style.css

```
body {
  background-color: #ffffff;
  color: #121212;
  transition: 0.3s ease;
  padding: 30px;
}

.dark-mode {
  background-color: #121212;
  color: #f0f0f0;
}
```

File 3: script.js

```
// 1. Find the button
const btn = document.getElementById("toggle-btn");

// 2. Listen for clicks
btn.addEventListener("click", function() {
  // 3. Toggle dark mode!
  document.body.classList.toggle("dark-mode");
});
```

TEST YOUR CODING POWERS! ⚡

Complete the challenges and see how much you learned!

5. CUSTOMIZE YOUR APP COLORS! 🎨

Open your `style.css` and try changing your dark mode colors to match your favorite apps!

App Inspiration	Color Name	Hex Code	Try Using It For...
BYJU'S	Purple	#6200ea	Headings or Links
Swiggy	Bright Orange	#fc8019	Button Background
WhatsApp	Teal Green	#00a884	Borders or Accents
Zomato	Red	#e23744	Highlighted text

6. KID'S CODING QUIZ 🧩

1. Which web language is like the paint and decorations on a house?

- A) HTML B) CSS C) JavaScript

2. What does `classList.toggle("dark-mode")` do when you click the button?

- A) Always turns the screen red
B) Adds dark mode if it's off, and removes it if it's on
C) Deletes your webpage

3. What is the doorbell of JavaScript that waits for you to click?

- A) `addEventListener("click")` B) `openDoor()` C) `ringBell()`

7. LEVEL-UP CODING QUESTS 🏆

🌟 Quest 1: Smart Button Text

Can you make the button text change to "Switch to Light Mode" when dark mode is turned on?

🌟 Quest 2: Sun & Moon Icons

Add a 🌙 icon in dark mode and a ☀️ icon in light mode next to your heading!
