

DIGITAL DETECTIVES: SPOTTING THE UNREAL

The Impossible Speech

Imagine watching a famous Indian actor speaking 10 different languages fluently in one video — Hindi, Tamil, Telugu, Bengali, Marathi, and more!

The actor's lips move perfectly with each language. The voice sounds just right. But wait... Is this real or a digital mask?

Think of it like a digital mask hiding the real face underneath!

How Does AI Make Deepfakes?

AI learns how a face moves and talks to create a copy. It watches many videos to understand expressions, lip movements, and voice patterns.

Think of it as "Mirror Magic" that tricks our eyes — the AI creates a reflection that looks real but is actually (fake)!

Detective's Toolkit

Weird Eyes

Watch for unnatural blinking or eyes that don't move right. Deepfakes often have strange eye movements!

Robotic Voice

Listen carefully! Does the voice sound odd, robotic, or not match the lip movements?

Strange Blur

Look at edges and shadows. Deepfakes often have blurry, flickering backgrounds or weird shadows.

Real vs. AI

Can you spot the digital mask? Look carefully at both images below. One is a real photo and one is an AI-made deepfake. Use your detective skills to find the differences!

- ✓ Real Photo: Natural eyes, smooth movements, clear background
- ✗ Deepfake: Watch for weird blinking, blurry edges, odd shadows

What is Misinformation?

Misinformation is (fake) news or messages that spread quickly online.

Example: A WhatsApp message saying "School closed today" when it is not true. Always check before believing!

The WhatsApp Test

A viral message spreads in Priya's family WhatsApp group: "Breaking news! School closed tomorrow due to heavy rain!" Everyone starts making plans, but is it true? Before forwarding, Priya's family decides to be Digital Detectives!

- ✔ Check official school website or news sources first
- ✔ Ask a parent or teacher to verify the message

Why Think Before You Share?

Hard to Take Back

Once you share
something online, it
spreads fast like wildfire.
You can't undo it!

Can Hurt Others

Sharing fake news can
hurt feelings or cause
confusion for friends and
family.

Protect Your Circle

Being a digital detective
helps protect your
friends and family from
fake news!

The Digital Detective Pledge

Take the pledge to become a true Digital Detective! By making this promise, you join a team of smart kids who protect their friends and family from (fake) media. Raise your hand and say it with us!

- ✓ I will look closely for digital masks and check with adults before sharing.
- ✓ I will not forward strange messages without proof and help others spot nakli media.

Summary: Spotting the Unreal

Deepfakes

AI-made nakli videos and audios that look real but are fake digital masks.

3 Warning Signs

Look for weird blinking, robotic voice, and strange background blur or shadows.

Think Before Sharing

Misinformation spreads fast! Always check before sharing. Be a Digital Detective!

Ready for the Detective Challenge?

Let's practice! What would you do if you saw a video of your favorite singer promoting a weird app?

Pause and think like a digital detective:

- Is this really them?
- Does something look or sound strange?
- Should I check with an adult first?

Remember: Real detectives always investigate before believing!

THANK YOU, DIGITAL DETECTIVES!

Any questions before we finish?

Keep Spotting the Unreal!
