

SCIENCE FAIR SHOWCASE: DISCOVERING SCIENCE AT HOME!

THE SPARK: MESSY KITCHEN MYSTERY!

Welcome to the Science Fair! A place to explore and discover. What happens when soda meets salt or baking soda? Watch it fizz and bubble! Today we start our science adventure right in the kitchen!

**What happens when
soda meets salt or baking
soda? Let's find out!**

MEET THE 5 DETECTIVE STEPS!

The Scientific Method

Scientists follow 5 fun steps to explore and discover. Let's learn them together!

- 👁️ Look Closely – Observe the world around you!
- ❓ Ask a Question – What do you want to find out?
- 💡 Make a Smart Guess – What do you think will happen?
- 🧪 Try It Out – Do your experiment!
- 📢 Tell the World – Share what you learned!

"Look, Ask, Guess, Try, Tell!"

STEP 1 – LOOK CLOSELY!

Rajma swells up when soaked in water overnight. Look at the difference! Why does this happen? Scientists always start by observing carefully.

Rajma swells up when soaked.
Why does this happen?

Can you spot changes at home?
Look closely!

MAKE A SMART GUESS!

Look at two glasses of Nimbu Paani — one with Misri (rock sugar) and one with fine sugar. Which one disappears faster?

"If the sugar pieces are smaller, then they will dissolve faster in water!"

This is called a HYPOTHESIS — our smart guess before we try it out!

Let's guess what will
happen! 🍊

TRY IT OUT! FAIR TEST & VARIABLES

Place two cups of mustard seeds on a sunny windowsill and in a dark cupboard. Use the same soil and same water for both. Only one thing is different — sunlight!

The thing we **CHANGE** is sunlight. One cup gets sun, one stays in the dark.

The things we **KEEP THE SAME** are soil and water. That makes it a fair test!

STEP 4 – TELL THE WORLD!

Your Showcase Board

Put your title on top, pictures in the middle, and results at the bottom right. Use drawings and charts to make it colourful!

**Be creative with
colours, drawings,
and charts!**

THE GREAT SEED RACE!

We are planting moong dal seeds in three different liquids — Tap Water, Milk, and Coconut Water! Each seed gets the same soil, the same sunlight, and the same amount of liquid. The only thing we change is the liquid. Which one will help the seeds sprout the fastest? Let's find out together!

Let's plant seeds in different liquids and see which grows fastest!

MEASURE YOUR SPROUTS!

Place your ruler next to each moong dal sprout and measure how tall it has grown. Write down the number in centimetres. Do this every day at the same time so your test stays fair!

Remember: Measure carefully and record your results in your science notebook.

The more carefully you measure, the better your results will be!

BUILD YOUR BOARD!

Now it's time to show the world what you discovered! Arrange your work on chart paper or a cardboard board. Here's how to set it up:

Title at the top — big and bold!

Pictures in the middle — draw or paste!

Results at the bottom right — your findings!

THE CHEATING EXPERIMENT!

Gappu waters one plant in a dark closet and another in the sun — but gives them different amounts of water! That's not a fair test. 🌱

Can you spot what went wrong with Gappu's experiment?

A fair test means changing only ONE thing at a time!

MISSION BRIEFING!

You are now ready to explore and discover! Complete your checklist and earn your Junior Scientist Badge. Let's go, Science Detectives!

★ Remember the 5 Detective Steps!

🧪 Plan a fair test at home!

🔍 Find one question at home today!

THANK YOU & QUESTIONS!

Let's Explore Together!

Thank you for joining our Science Fair Showcase! You have learned so much today. Keep asking questions and exploring the world around you!

Any questions? We'd love to hear from you!

BONUS: EVERYDAY SCIENCE AT HOME!

Look around your home. What questions can you ask today? Science is everywhere — in your kitchen, garden, and backyard!

Observe your Tulsi or Money plant — how does it grow?

Try soaking Rajma or dissolving Misri in water!

Be a backyard scientist every day!
