STATIC ELECTRICITY — DANCING CEREAL MAGIC!

The Flying Hair Mystery

One chilly winter morning,
Vihaan's hair started flying up all
by itself during assembly! What
caused the magic?

What is Static Electricity?

Static electricity is sticky electricity that stays on things!

- Made by rubbing two things together
- Tiny invisible sparks jump from one thing to another
- It can make your hair stand up like magic!

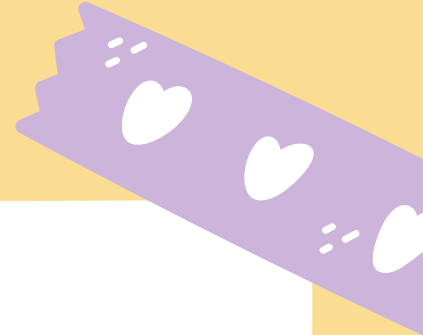

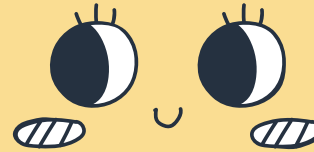

- Rubbing a balloon on hair or wool makes it charged
- Charged things can pull light objects like magic
- The more you rub, the stronger the sticky power!

The Magic of Rubbing

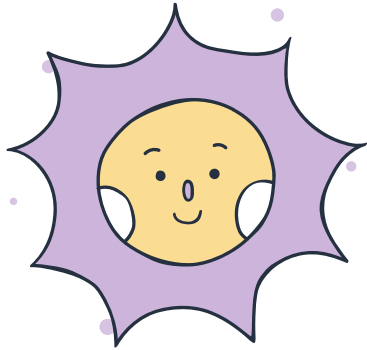

The Invisible Pull

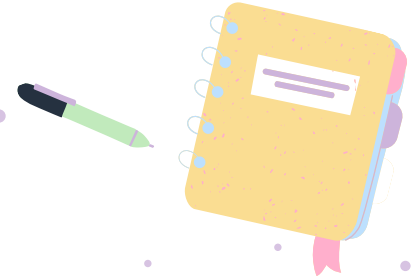

Charged objects can pull things without touching — like magic!

Example: A balloon can make puffed rice jump and dance on a plate without even touching it!

Let's See the Magic!

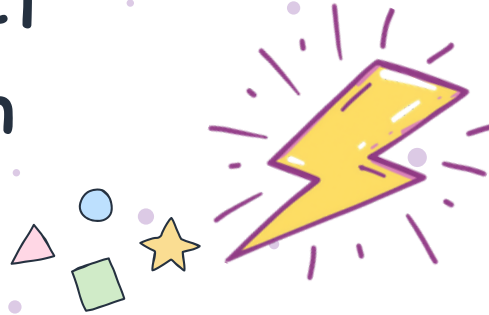

Step 1: Spread a few pieces of Muri on a flat plate.

Step 2: Rub it back and forth very quickly against your dry hair or a woollen sweater for 30 seconds.

Step 3: Slowly bring the balloon over the muri plate

Dancing Cereal Demo In Action

Look! The cereal is dancing without being touched. Zap!
Magic pull! Watch how the charged balloon makes the
puffed rice bits lift up and dance in the air — just like real
magic happening right before your eyes!

Question 1: Will paper bits dance with the charged balloon?

Will It Dance? Let's Predict!

Question 2: Will a plastic spoon dance with the charged balloon?

Question 3: Will cloth pieces dance with the charged balloon?

Everyday Static Electricity in India

Hair flying when taking off your sweater in winter — zap!

Sparks from silk sarees rubbing together — crackle!

Plastic comb making your hair jump and dance!

Puffed rice dancing on a plate near a charged balloon!

Remember the Winter Spark Safety Tip!

Static electricity can give little shocks — so always be careful!

- ⚡ Don't touch electrical plugs or wires when you feel charged up
- ⚡ Touch a metal door handle gently to release the charge safely
- ⚡ It's just a tiny zap, nothing to worry about — but stay safe!

What Did We Learn Today?

Static electricity is sticky electricity made by rubbing things together!

Charged objects can pull light things without even touching them!

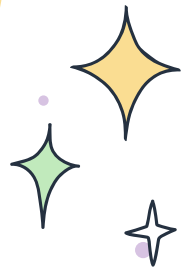

We made puffed rice dance like magic with a balloon!

We saw many examples from home and school in India!

The Science Magician's Magic Quote

"Science is magic you can touch and see!"

— Your Science Magician

THANK YOU!

Thank you for being great Science Magicians! Questions? Let's share your magic stories.
