

SCRATCH JR: CATCH THE STAR GAME

CATCH STARS ON DIWALI NIGHTS!

Have you seen stars twinkling over your roof?
"What if you could catch one?"

MEET SCRATCH JR

Simple Coding app prey

01

Canvas: This is where your game comes alive! All sprites move and play here on the screen.

02

Background Library: Choose a beautiful night sky, outer space, or any fun scene for your game!

03

Sprite Palette: Pick your characters here — a star, a catcher, or even a friendly astronaut!

ADDING OUR SPRITES

01

Add the Catcher sprite — choose a monkey or astronaut character to move and catch the falling star!

02

Add the Star sprite — pick a twinkling star or a mango to be caught. Place it at the top of the canvas.

03

Explore diverse Indian characters in the sprite palette — find your favourite and make the game your own!

SEQUENCE: EXPLAINED WITH NIMBU PANI

WHY DOING THINGS IN A PARTICULAR ORDER IS
IMPORTANT? FOR YOU AND THE STAR GAME!

01

Step 1: Pour water into a tall glass and add a pinch of salt for the perfect base.

02

Step 2: Squeeze fresh lemon juice into the glass — the more, the tangier!

03

Step 3: Mix in sugar and stir well. If order changes, it breaks!

EVENT BLOCKS

CLAPPING STARTS THE SONG!

When you clap, a birthday song starts playing. In Scratch Jr, a Green Flag tap or screen touch is your "clap" — it starts your game!

BELL STARTS RECESS!

When the school bell rings, everyone runs out to play! In your game, touching the star sprite is the "bell" — it triggers the catch action. Events trigger actions in your game!

LOOPS = TRAFFIC SIGNALS & JALEBI!

- 🚦 Traffic lights change colors again and again – Red, Yellow, Green... forever!
- 🍬 Jalebi swirls round and round in hot oil – never stopping!
"Loops repeat actions forever!"

CODING CATCHER SPRITE

01

Start on Green Flag — drag the green flag block to begin. When the flag is tapped, the Catcher sprite wakes up and gets ready to move!

02

Move Right 5 steps, then Move Left 5 steps — add both move blocks in order. The Catcher slides back and forth across the screen to catch the star!

03

Wrap it in a Repeat Forever loop — place both move blocks inside the loop. Now the Catcher keeps moving left and right again and again without stopping!

CODING STAR SPRITE

- Start on Tap
- Play pop sound
- Hide
- Wait 2 seconds
- Show at random place

FUN MICRO-CHALLENGES!

01

Make the star spin around when the catcher touches it. Add a rotate block to the star sprite!

02

Make the star grow bigger each time it appears. Use the grow block to change its size!

03

Change your catcher sprite to an astronaut or a monkey. Explore the sprite library!

DEBUGGING MADE EASY

Does your sprite move wrong?
Check block order!
Fix broken sequences step by step.

PERSONALIZE YOUR GAME!

Mango Star

Monkey Catcher

Astronaut

RECAP TIME!

01

Sequence: Steps must be in the right order — just like making nimbu pani! Change the order and it breaks!

02

Events: A tap or click starts the action — like a school bell starting recess or clapping starting a song!

03

Loops: Repeat actions forever — like a traffic light changing colors again and again and again!

HOME PLAY ASSIGNMENT

01

Make your own Catch the Star game at home. Use what you learned today and build your very own version!

02

Try changing sprites and sounds. Swap the catcher for a monkey or astronaut, and pick a fun sound effect!

03

Show your game to your family! Teach them how it works and let them try to catch the star!

THANK YOU!
