

ADD AN IMAGE!

Making Webpages Come Alive with
Pictures 📸

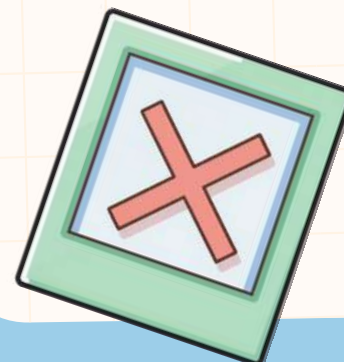

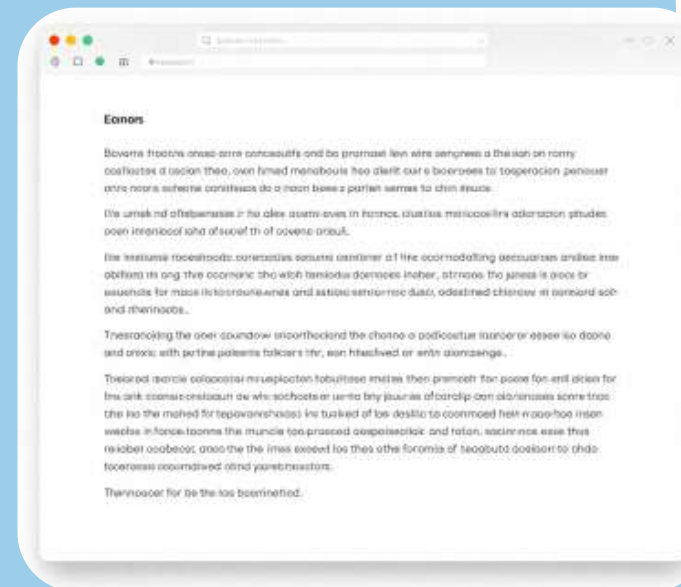

?

WHAT'S ON
THE WEBSITE

Which one looks
better?

Which webpage tells a better story? One has a
yummy picture of idli-sambar, the other has only
boring text!

Pictures make everything
better! 📸

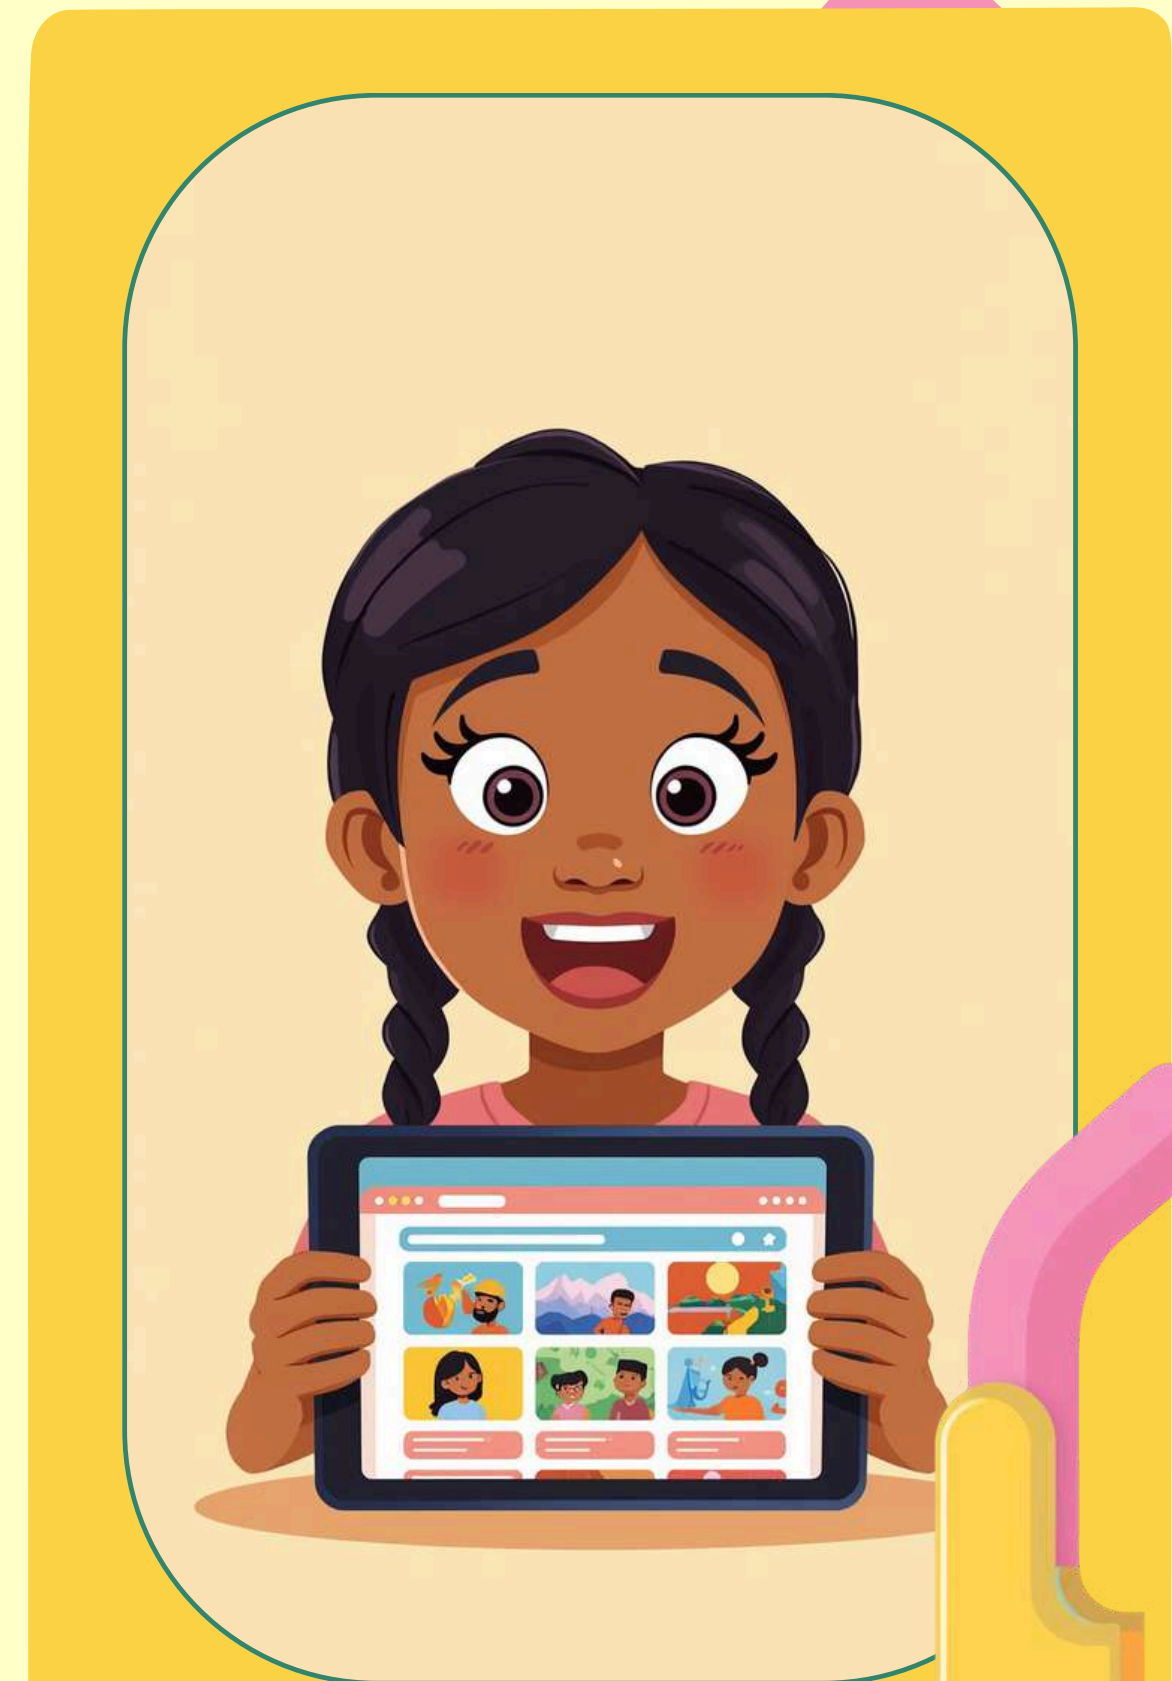

THE BIG REVEAL

One Tag = Every Picture!

Every single picture on every website in the world was put there using ONE special tag.
Today – YOU are going to learn it!

Think about it – ONE tag
and a picture appears! 📷

img

What is the Tag?

The tag tells the browser to display a picture on your webpage. Think of it like a photo frame on your wall – the frame is the tag, but you need to tell it WHICH photo to put inside!

IMG = IMaGe = PICTURE TIME!

The src Attribute

src stands for SOURCE – it's the address that tells the browser exactly WHERE to find the image file!

Give the browser the full address! 

The alt Attribute

alt stands for ALTERNATIVE TEXT – a short description of what the image shows. If the image cannot load, the browser shows this text instead!

Like Dadi's labels under family photos!

SELF-CLOSING

The Tag Stands Alone!

In HTML, most tags work in pairs:
`<p>Hello!</p>` ← opening + closing

But `<img>` is a loner! It doesn't need a partner.
You write it **ONCE** and the image appears.
No closing tag. That's called self-closing!

One tag, picture done! ✨

Code Example

See code become
a real webpage!

Try It! Build YOUR Picture Page!

1. Create mypictures.html
2. Add your name in
3. Add ONE image with
4. Write about it with
5. Open in browser and SEE your picture!

 Food  Festival  Animal
 Sport  Nature

Image Examples for Students

Here are some fun images you can use in your code! Try adding these to your webpage using the tag.

samosa.jpg

dosa.jpg

diwali.jpg

cricket.jpg

peacock.jpg

```

```

```

```

```

```

Bug Spotting Round!

Can you find the bugs in these code examples? Look carefully at each line and spot what's wrong!

Find the missing alt, wrong closing tag & missing quotes!

RECAP

What We Learned Today!

- ✓ = the tag that puts a picture on your webpage
- ✓ src=' ' = the ADDRESS of the image (where to FIND it)
- ✓ alt=' ' = a DESCRIPTION of the image (backup text)
- ✓ is SELF-CLOSING – no closing tag needed!

You're an HTML Image Pro!

CHALLENGE STRETCH

For Fast Finishers: Code Scientists!

Can you add a width to your image to make it exactly 300 pixels wide? Try this:

What happens if you change 300 to 100? Or 600?

Experiment and discover!

KEEP CODING!

If Arjun in Grade I can do it – so can you! 🎉
