

SCRATCH STORY ANIMATION!

Bring a Panchatantra Tale to Life 🐒🐘

An Interactive Code Journey for Young Authors! ✨

Meet Our Story Friends!

Welcome to our grand Indian jungle theatre stage! Today, we are the directors of an ancient Panchatantra cartoon movie! 

Let's meet our two main character sprite actors standing under the shady green trees:

Chiku the Monkey

Chiku loves swinging on long jungle vines, eating yellow bananas, and calling out a happy greeting: "**Helloo!**"

Gajju the Elephant

Gajju has a giant grey trunk, loves splashing water, and speaks politely in a sweet voice, saying: "**Vanakkam!**"

What is Animation?

How do static drawings turn into a moving cartoon? It works exactly like a magic **Flip-Book** drawing notebook!

Picture by Picture!

Think of a cricket batsman swinging their bat for a giant sixer! If you draw one step of the swing on the corner of each paper page and flip through them fast with your thumb, the bat looks like it's swinging across the air! In Scratch code, we snap blocks together to flip these picture sheets automatically!

 Picture 1 +  Picture 2 +  Picture 3 = A Moving Cartoon!

The Secret Costume Changes! 🤖🐼

In Scratch, our characters can change their clothes or poses instantly! We call these different visual poses **Costumes**.

Making Running Steps! 🏃

Chiku the Monkey has two distinct costumes in his sprite locker:

- **Costume A:** Left foot stretching forward.
- **Costume B:** Right foot hopping upward.

When we tell Scratch to switch back and forth between Costume A and Costume B over and over, Chiku looks like he is sprinting across the jungle grass tracks!

Glide vs. Move Steps!

How does your actor travel from one side of the jungle grass to the other? Let's choose the right style block track:

The Glide Block

This block acts like a flying kite! It moves your character sprite smoothly, sailing across the screen like a bird riding the wind. Perfect for entering the stage gracefully! ✨

The Move Steps Block

This block acts like small, quick foot-steps! It makes your sprite hop forward in short, jerky jumps. Great for making little birds peck or simulating a bouncing toy ball!

Step 1: Glide Onto the Stage! 🐵🐵

Let's start directing our play movie scene. Follow these coding steps on your workspace panel screen:

- 1 Open your blue instruction drawer block box slot and find the rectangular `glide (1) secs to x: (0) y: (0)` code piece.
- 2 Snap this blue glide block directly onto your layout track setup. This instruction tells Chiku the Monkey to zoom smoothly into the center clearing from off-screen!

[Chiku the Monkey] sails smoothly onto the screen canvas zone!

Step 2: Create the Costume Loop!

Now let's coordinate Chiku's legs so he walks properly like an animated character:

- 1 Open the orange block shelf and drag out an alligator-mouth **repeat (10)** container cage box loop.
- 2 Open your purple box drawer and slide the small **next costume** block right inside the loop's mouth!
- 3 Add a tiny **wait (0.2) secs** timer chunk block underneath. This stops Chiku from flashing his leg changes too fast like a lightning bulb!

Step 3: Talk Politely in Turns!

When friends chat in the school yard, you wait for your companion to finish speaking before opening your mouth! This is called **Parallel Actions with turn-taking!**

Using the Clock Helper Box:

- Chiku uses a purple **say [Hello, Gajju!] for 2 secs** brick bubble.
- While Chiku talks, Gajju stands quiet and tracks an orange clock helper block: **wait (2) seconds**.
- Once Chiku's bubble fades away, Gajju can proudly respond, saying: "**Vanakkam, Chiku friend!**" 

Pop Quiz Time! 🧠

Which block choice lets a character sprite actor float smoothly across the screen canvas like a flying paper kite bird?

(A) The Quick Move Steps Block 🦶

Hint: Move steps makes short, jerky hops, not smooth flying motions!

(B) The Magic Glide Block! 🚀

Bingo! The blue glide block sails your characters smoothly from spot to spot!

(C) The Secret Hide Tag Block 😬

Hint: Hide makes your characters disappear from sight completely!

Cartoon Movie Director!

Sensational job, code master! You synchronized costume layers, programmed glide transitions, taught Gajju and Chiku to converse politely, and animated your very first Panchatantra story film loop track!

 **Keep on scripting codes, stacking layout loops, and directing magic stories!**
