**BUILD THE TALLEST TOWER!
THE MATHS OF
MEASUREMENT**

Grade 1 | Let's Learn Together!

Who Can Build the Tallest Tower?

Look at these children stacking blocks!
Some towers are tall, some are short.
Can you guess which tower will be the
tallest? Let's find out together!

Tall and Short Language

Tall, taller, tallest.
Short, shorter, shortest.
Example: "Dada is tall, Papa is taller,
the building is tallest!"

Find two things around
you. Which is taller?
Which is shorter?

Say it out loud: "This is
taller. That is shorter!"

Measuring Without a Ruler

Before rulers, people used hands and blocks to measure things!

Indian Example: Amma uses a katori to measure dosa batter.

New Words: unit, count, measure

Let's learn to measure like this too!

Activity Pause 2

Build a tower with blocks or books.
Count how many blocks tall your tower is. Say the number out loud as you stack each one. You did that! Keep counting — one, two, three, four... How tall can you go?

Fair Comparison (Baseline)

To compare towers fairly, start from the same flat surface. Think of Sports Day — all runners start from the same line! That's called a baseline. Fair, same, baseline!

Counting = Measuring

Height is a number! A bigger number means a taller tower. Count your blocks: "My tower is 7 blocks tall!" The more blocks you stack, the higher the number grows!

Build another tower!
Which tower is taller?
Which is shorter?

Use your words: taller,
shorter, tallest!

Predict, Build, Check!

Guess how tall your tower will be. Then build it and check if you were right!

Chant with me:

"Stack it up, count it right,
Build your tower tall tonight!"

Predicting helps us think like
mathematicians!

Quiz Time! Test Your Measurement Skills

- Q1: Which tower is taller?
Q2: How many blocks tall is this tower?
Q3: What do we say if one tower is taller than another?

You Are a Tower Mathematician!

Congratulations! You learned to measure, compare, and build towers like a real mathematician! You know tall, taller, and tallest. You can count blocks and compare fairly. Keep stacking and measuring every day!

$$1+2=3$$

Keep Building &
Measuring!

THANK
YOU!

@PLANRS
ACADEMY

$$1+2=3$$

$$1+2=3$$

COURSE CHANT!

Stack it up, count it right,
Build your tower tall tonight!
One, two, three — who can see?
The tallest tower belongs to ME!
