

Colour My Webpage!

Grade 1 Coding Lesson

What is HTML?

HTML helps us build webpages! Think of it like a **recipe** that tells the computer what to show [cite: 3].

Just like a recipe has steps, HTML has special words called **tags** that give instructions to make webpages look nice and colorful [cite: 4]! HTML is the language that makes the internet come alive [cite: 5].

Adding Colours

Colours make webpages fun and pretty! With HTML, we can paint our webpages with any colour we like [cite: 7]. Colours brighten up text and backgrounds on our pages [cite: 8].

The 'Style' Tag

We use the **'style'** tag to add colours to our webpage [cite: 12].

```
style="color: red;"
```

The word 'color' tells the computer what to change, and 'red' is the colour we want [cite: 14].

Ways to Pick Colours

There are two main ways to add colours in HTML [cite: 43]:

1. Using Colour Names

Colour names are easy words like "red" and "blue" [cite: 43]. They are easy to remember [cite: 45]!

2. Using Hex Codes

Hex codes are **secret colour codes** [cite: 29]! They give you even more choices [cite: 44, 46].

- They always start with a # [cite: 30].
- They have 6 letters or numbers [cite: 30].
- **Example:** #FF0000 means red [cite: 31]!

Try these Hex Codes:

#FF69B4 - Pink [cite: 46]

#87CEEB - Sky Blue [cite: 47]

#FFDAB9 - Peach [cite: 50]

Changing the Background

Want to change your whole webpage's colour? Use the **background-color** style [cite: 49]!

```
style="background-color: pink;"
```

You can use names like "pink" or hex codes like "#FFDAB9" to pick any shade you like [cite: 50].

Practice Time!

Step 1: Pick a colour name or hex code you like [cite: 61].

Step 2: Type it inside the style tag in your code [cite: 62].

Step 3: See your text or background change like magic [cite: 63]!

Pro Tips for Young Coders:

- Use **style="color: colourname;"** for text [cite: 79].
- Use **style="background-color: hexcode;"** for backgrounds [cite: 80].
- Get creative! Colour headings one colour and text another [cite: 72].

Start Creating Today!

Your imagination is the only limit [cite: 84]!
