

■ CALENDAR MATHS

Grade 2 Mathematics · Lesson Guide

Days · Weeks · Months · Reading Calendars · Leap Years

Welcome to **Calendar Maths**! In this lesson we will explore days of the week, months of the year, how to read a calendar, and even discover what a **leap year** is. Let's begin our fun learning adventure! ■

■ What Is a Calendar?

A **calendar** helps us keep track of **days**, **weeks**, and **months**. It shows us all the days in a month and helps us remember important dates like **birthdays** and **holidays**!

■ Think about it!

Where have you seen a calendar at home or in school? On a wall? On a phone? On a computer?

7 days

in one week

4 weeks

in one month

12 months

in one year

365 days

in one year

■ Days of the Week

There are **7 days** in every week. They always follow the same order!

Day	Order	What happens?
■ Sunday	1st	Weekend — rest and family time!
■ Monday	2nd	School begins for the week!
—■ Tuesday	3rd	Learning keeps going strong!
■ Wednesday	4th	Middle of the week — halfway there!
■ Thursday	5th	Almost at the weekend!
■ Friday	6th	Last school day — time to celebrate!
■ Saturday	7th	Weekend — play, fun, and friends!

■ Weekdays vs Weekends

■ Weekdays (School Days)	■ Weekends (Rest & Fun!)
Monday Tuesday Wednesday Thursday Friday → 5 school days	Saturday Sunday → 2 rest days

■ Months of the Year

There are **12 months** in every year. They always follow the same order!

#	Month	Days	Season
1	January	31	❄️ Winter
2	February	28	♥️ Winter
3	March	31	■ Spring
4	April	30	■ Spring
5	May	31	■ Summer
6	June	30	■ Summer
7	July	31	■ Summer
8	August	31	■ Summer
9	September	30	■ Autumn
10	October	31	■ Autumn
11	November	30	■ Autumn
12	December	31	■ Winter

■ How Many Days in a Month?

Most months have **30 or 31 days**. February is special — it has only **28 days** in most years and **29 days** in a leap year!

Days	Months
31 days	January, March, May, July, August, October, December (7 months)
30 days	April, June, September, November (4 months)
28/29 days	February only — 28 normally, 29 in a leap year! (1 month — the shortest!)

■ The Knuckle Trick — remember 30 vs 31 days!

Make a fist. Count across your knuckles and the dips between them starting from January. **KNUCKLE = 31 days. DIP = 30 days (or 28/29 for February).** When you reach July (knuckle), start again from August (knuckle). Try it!

■ What Is a Leap Year?

Every **4 years**, we add one extra day to February. This special year is called a **leap year**! In a leap year, February has **29 days** instead of 28.

Leap years help our calendar stay in sync with the Earth's journey around the sun. It takes Earth about **365¼ days** to orbit the sun, so those quarter-days add up to a whole day every 4 years!

2020 ■ Leap Year	2021 ■ Normal Year	2022 ■ Normal Year	2023 ■ Normal Year	2024 ■ Leap Year	2028 ■ Next Leap!
---------------------	-----------------------	-----------------------	-----------------------	---------------------	----------------------

■ How to Read a Calendar

Reading a calendar is easy once you know the parts! Here is a sample calendar for **May** so we can practise together.

May 2025						
Sun	Mon	Tue	Wed	Thu	Fri	Sat
				1	2	3
4	5	6	7	8	9	10
11	12	13	14	15	16	17
18	19	20	21	22	23	24
25	26	27	28	29	30	31

Today — circle the date!

Birthday — special day!

Holiday — mark it!

Weekend — Saturday & Sunday

■ Steps to Read a Calendar

1

■ Look at the **top row** — it shows the days of the week (Sun, Mon, Tue...)

2

■ Find the **number** you want — each number is a date in the month.

3

■ Read **down the column** to find which day of the week that date falls on.

4

■ **Weekends** (Sat & Sun) are shown in a different colour — rest days!

5

■ **Circle today's date** or mark important dates like birthdays and holidays!

⇒ ■ Practice Quiz — Calendar Maths

Answer each question below. Write your answer in the **My Answer** box, then check the ✓ **Answer** column!

#	Question	My Answer	✓ Answer
1	How many days are in one week?		7 days
2	Name the days of the week in order.		Sun, Mon, Tue, Wed, Thu, Fri, Sat
3	How many months are in one year?		12 months
4	Which month comes after July?		August
5	How many days does February have in a normal year?		28 days
6	What do we call a year when February has 29 days?		A Leap Year
7	Name the two weekend days.		Saturday and Sunday
8	How many weekdays (school days) are in a week?		5 weekdays
9	Which month is the 9th month of the year?		September
10	How many days are in April?		30 days
11	How many days are in January?		31 days
12	If today is Monday, what day is tomorrow?		Tuesday
13	A week starts on Sunday. What is the last day?		Saturday
14	How many months have 31 days?		7 months
15	Every __ years, we have a leap year.		4 years

■ Fun Activities

■ Find Your Birthday Month!

Look at the 12 months and find the one when you celebrate your birthday. Is it in summer, winter, autumn, or spring? Share with your classmates!

■ Count the Days!

Count how many days there are from Monday to Friday. Start: Monday → Tuesday → Wednesday → Thursday → Friday. How many? Say the number out loud!

■ Make Your Own Calendar Page!

Draw a blank calendar grid for this month. Write the name of the month at the top, fill in the days of the week, and number all the dates. Circle today!

■ Leap Year Detective!

Can you tell if these years are leap years? Hint: divide by 4 — if there is no remainder, it is a leap year! Try: 2020, 2021, 2022, 2024, 2030.

■ Recap — What We Learned

■ A **week** has **7 days**: Sunday, Monday, Tuesday, Wednesday, Thursday, Friday, Saturday.

■ **Weekdays** (Mon–Fri) are school days. **Weekends** (Sat & Sun) are for rest and fun!

■ A **year** has **12 months**. Months have 28, 29, 30, or 31 days.

■ **February** is the shortest month — 28 days normally, 29 in a leap year.

■ A **leap year** happens every **4 years**. It adds 1 extra day to February.

■ A **calendar** helps us know the date, plan events, and track time passing.

■ Fun Fact: The calendar we use today is called the **Gregorian Calendar**!

■ Thank You for Learning Calendar Maths! ■

Keep practising — you're a Calendar Maths star! ■
