

Elephant Toothpaste Experiment!

What is Elephant Toothpaste?

Elephant Toothpaste is a fun science experiment that makes lots of foamy bubbles — like giant toothpaste for an elephant!

Materials You Need

- 💧 Hydrogen peroxide
- 🧼 Dish soap
- 🥄 Food coloring
- 🌱 Yeast + warm water
- 🧴 A clean bottle
- 🕶️ Safety goggles & gloves

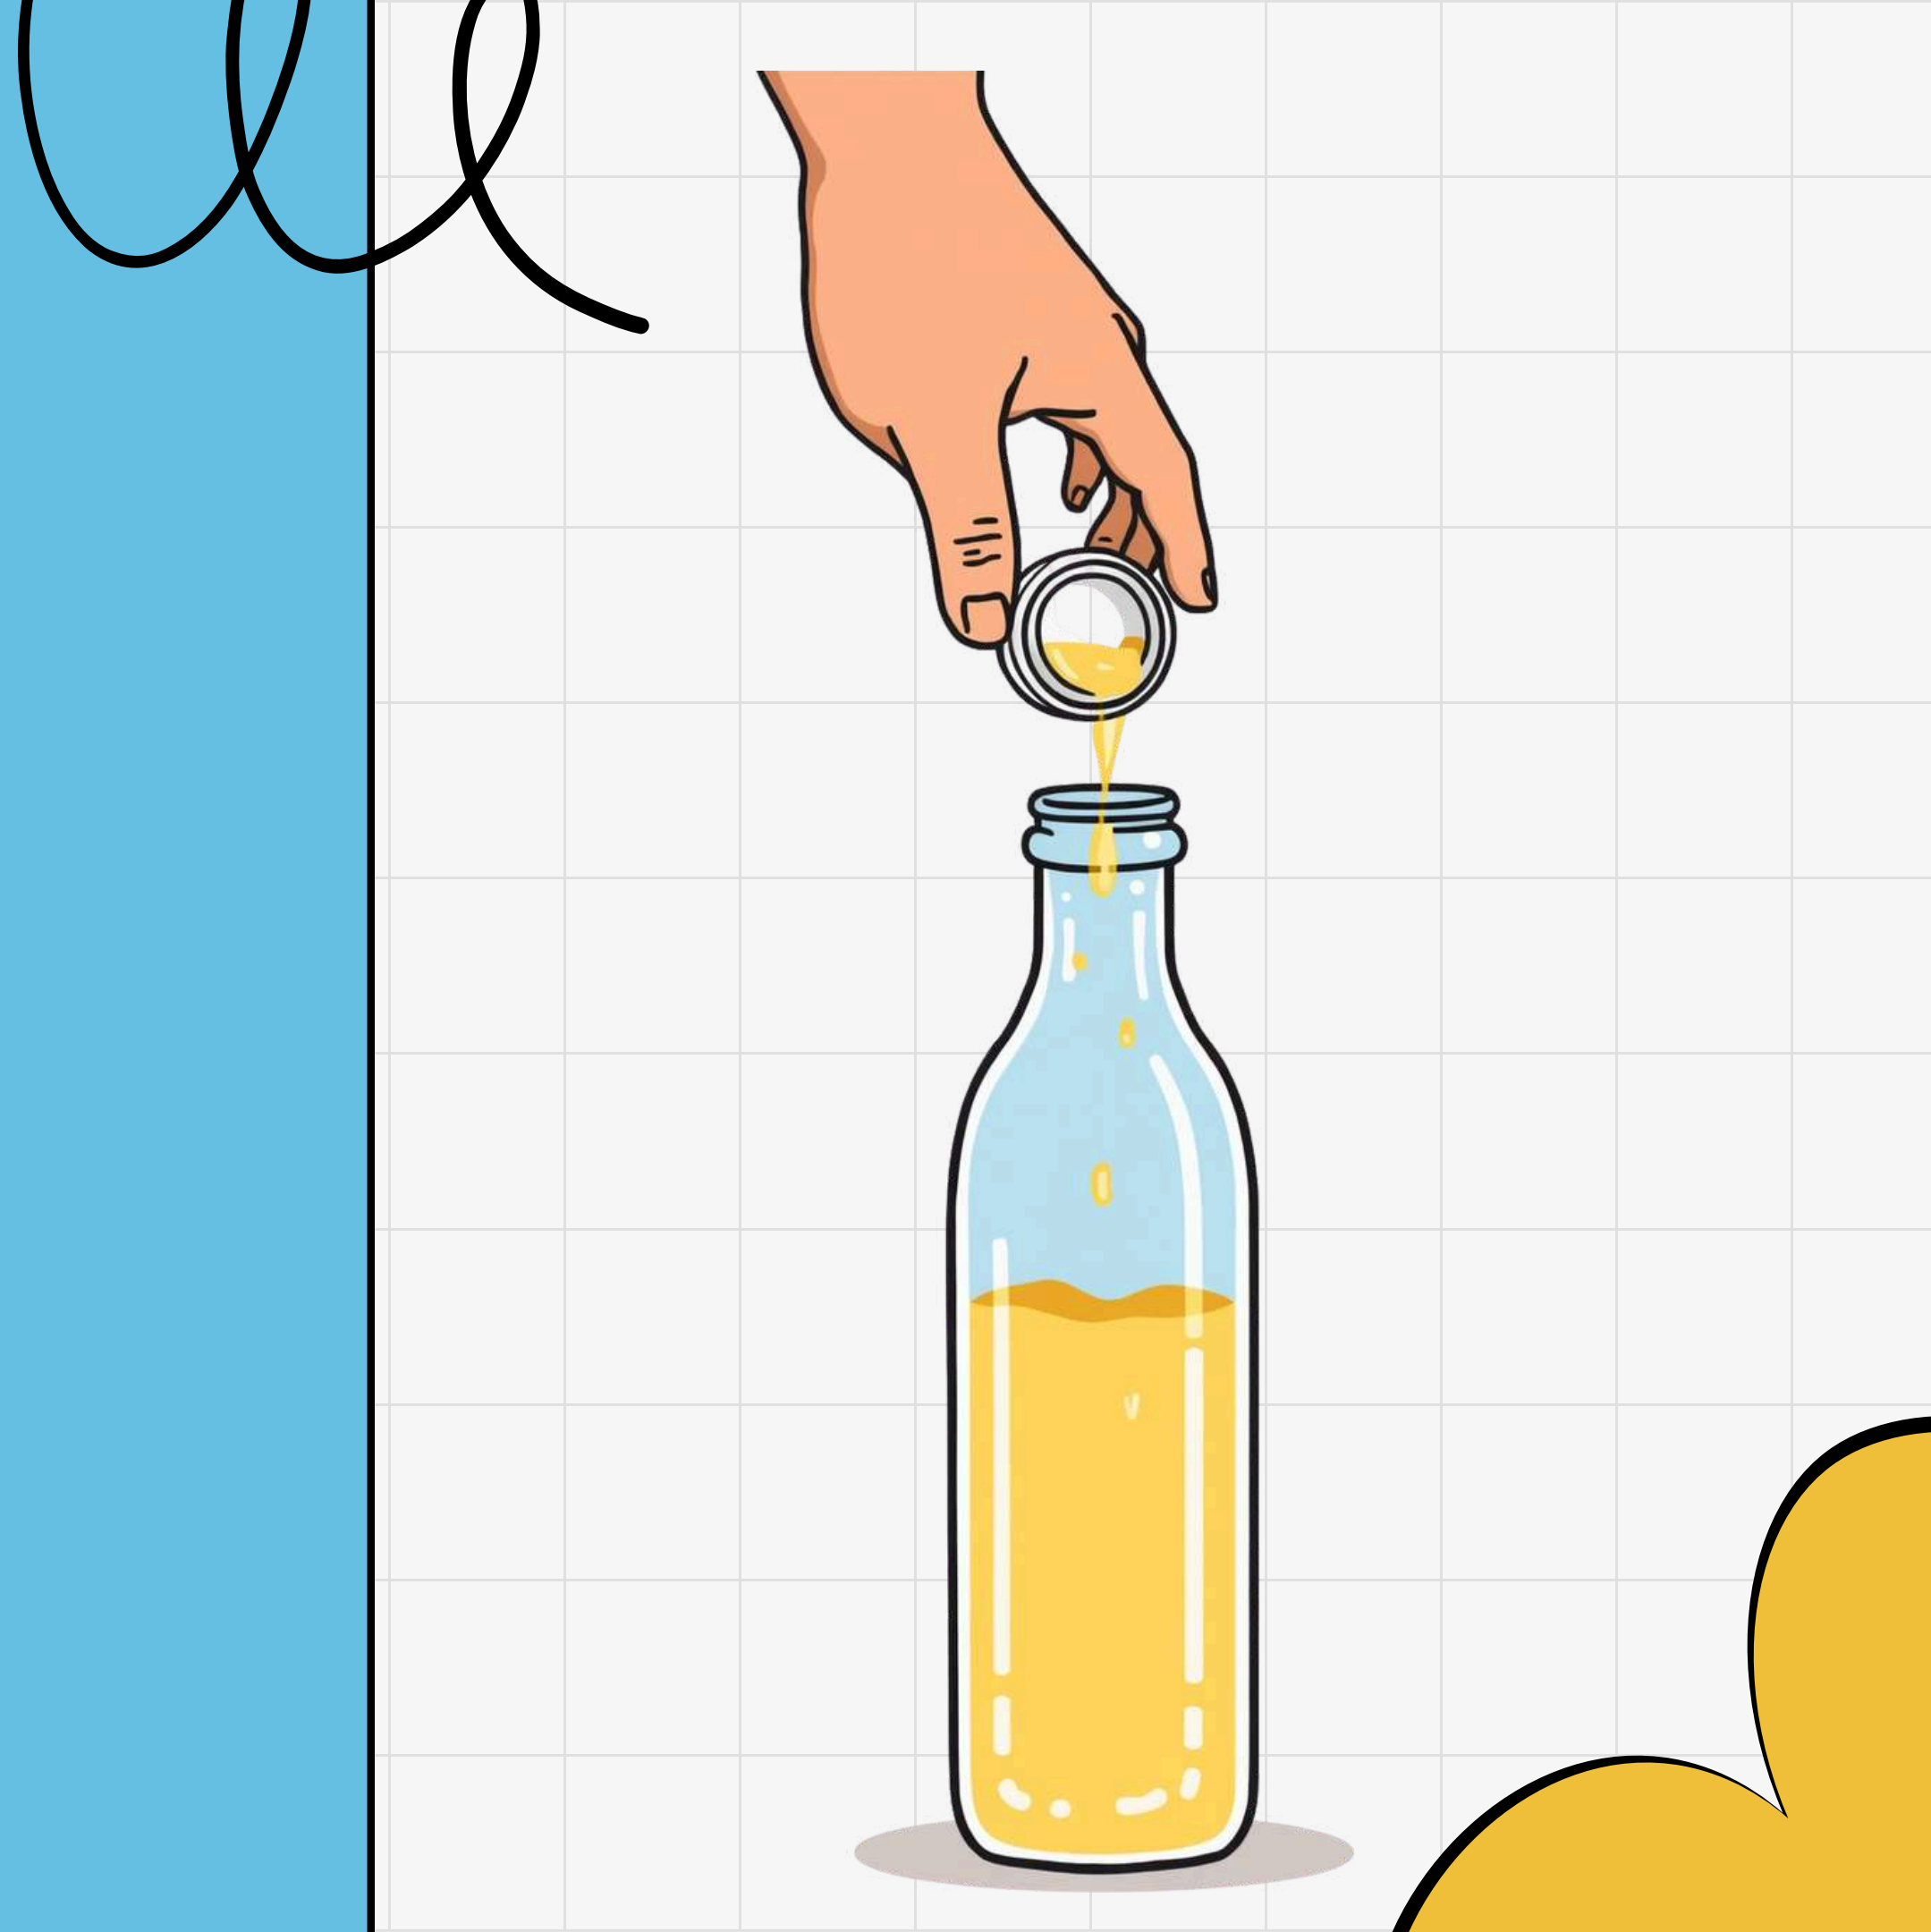

Safety First!

Always ask an adult to help.
Wear safety goggles and gloves.
Do the experiment in a safe
place like outside or on a tray.

Step 1 - Prepare the Bottle

Pour hydrogen peroxide into your bottle carefully.

Step 2 - Add Soap & Color!

Add a few drops of dish soap and your favourite colour into the bottle. Watch it swirl!

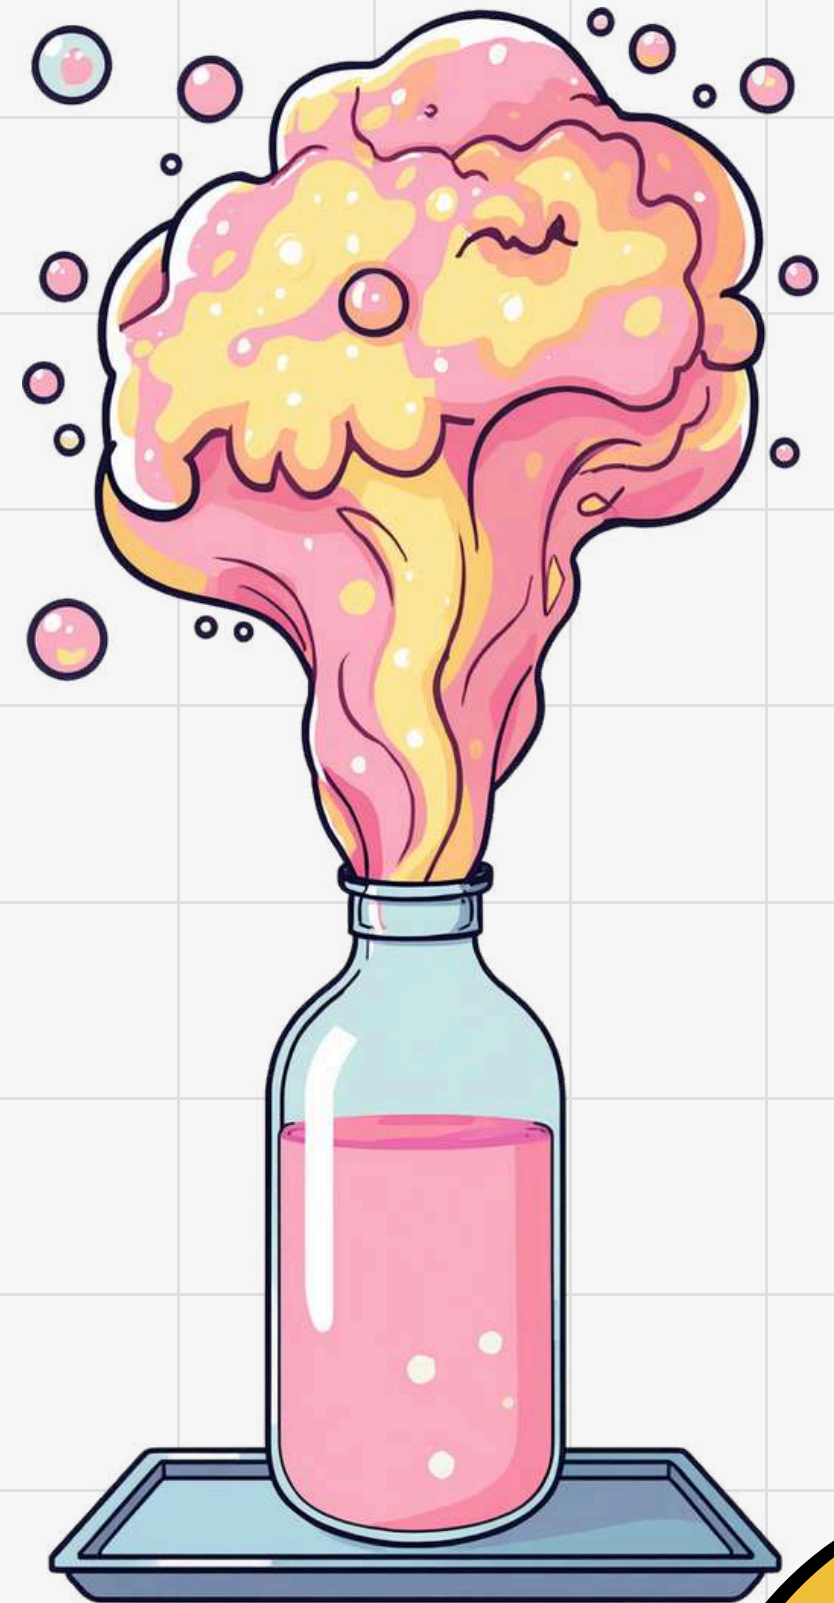

Step 3 - Mix the Yeast

Mix the yeast with warm water and wait a few minutes.

Step 4 - Pour & Watch!

Pour the yeast mixture into the bottle quickly and watch the foam grow!

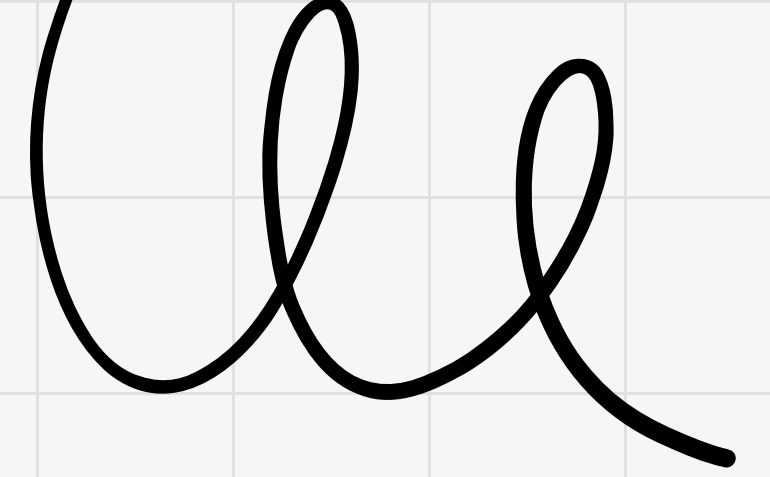

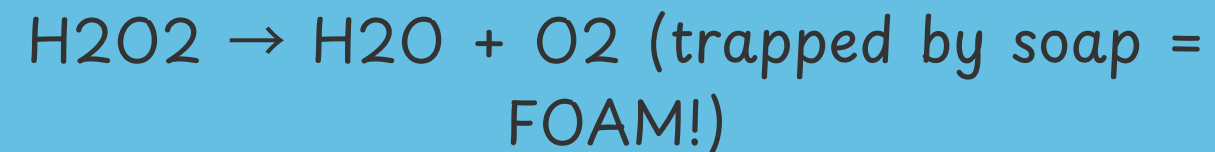

What Happened?

The foam grows and spills out like toothpaste for an elephant! The yeast helped make lots of bubbles really fast!

Why Does It Happen?

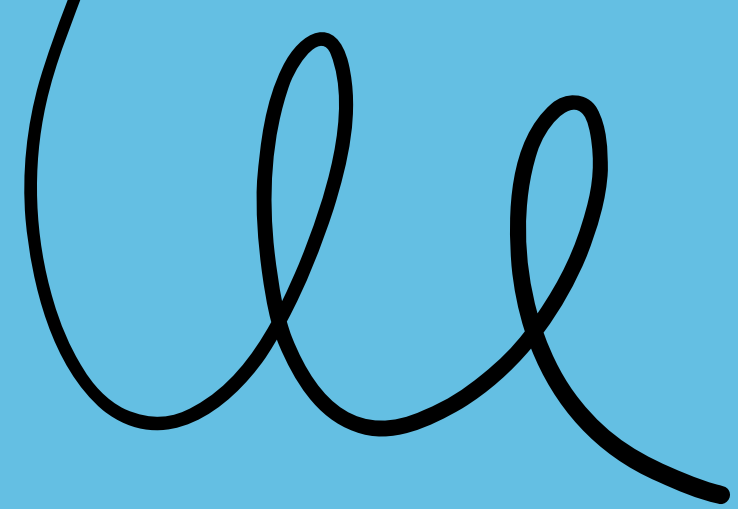

The yeast breaks down hydrogen peroxide, which releases oxygen bubbles. The soap catches all those bubbles and makes a big, fluffy foam — just like toothpaste for an elephant!

Fun Facts About Elephants!

- 🌊 Elephants love to play in water!
- 🌀 They use their trunks like giant straws.
- 💪 Elephants are very strong but gentle.
- 🚫 Elephants can't jump!

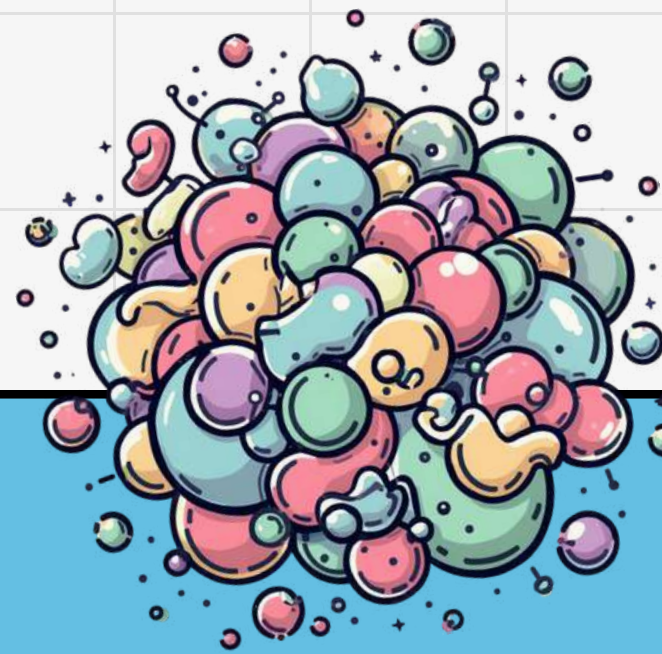

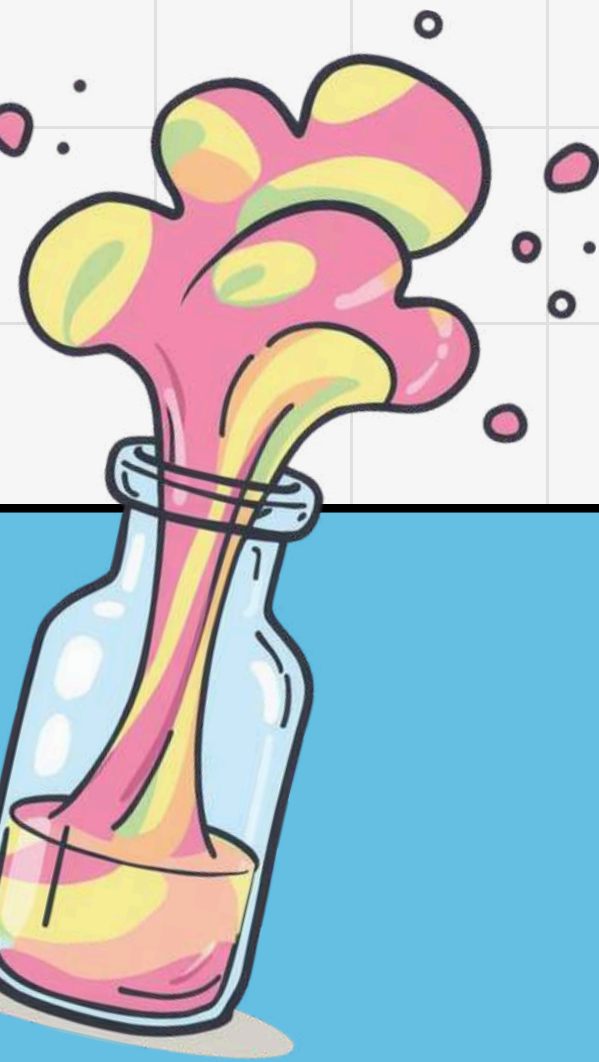

How to Clean Up

Clean up with water and soap.

Ask an adult to help throw away materials safely.

What Did You Learn?

- ✨ Science can be fun!
- 🧪 Chemical reactions make bubbles.
- 🚒 Safety is always important.
- 🏠 You can do experiments at home with adult help!

Try It At Home!

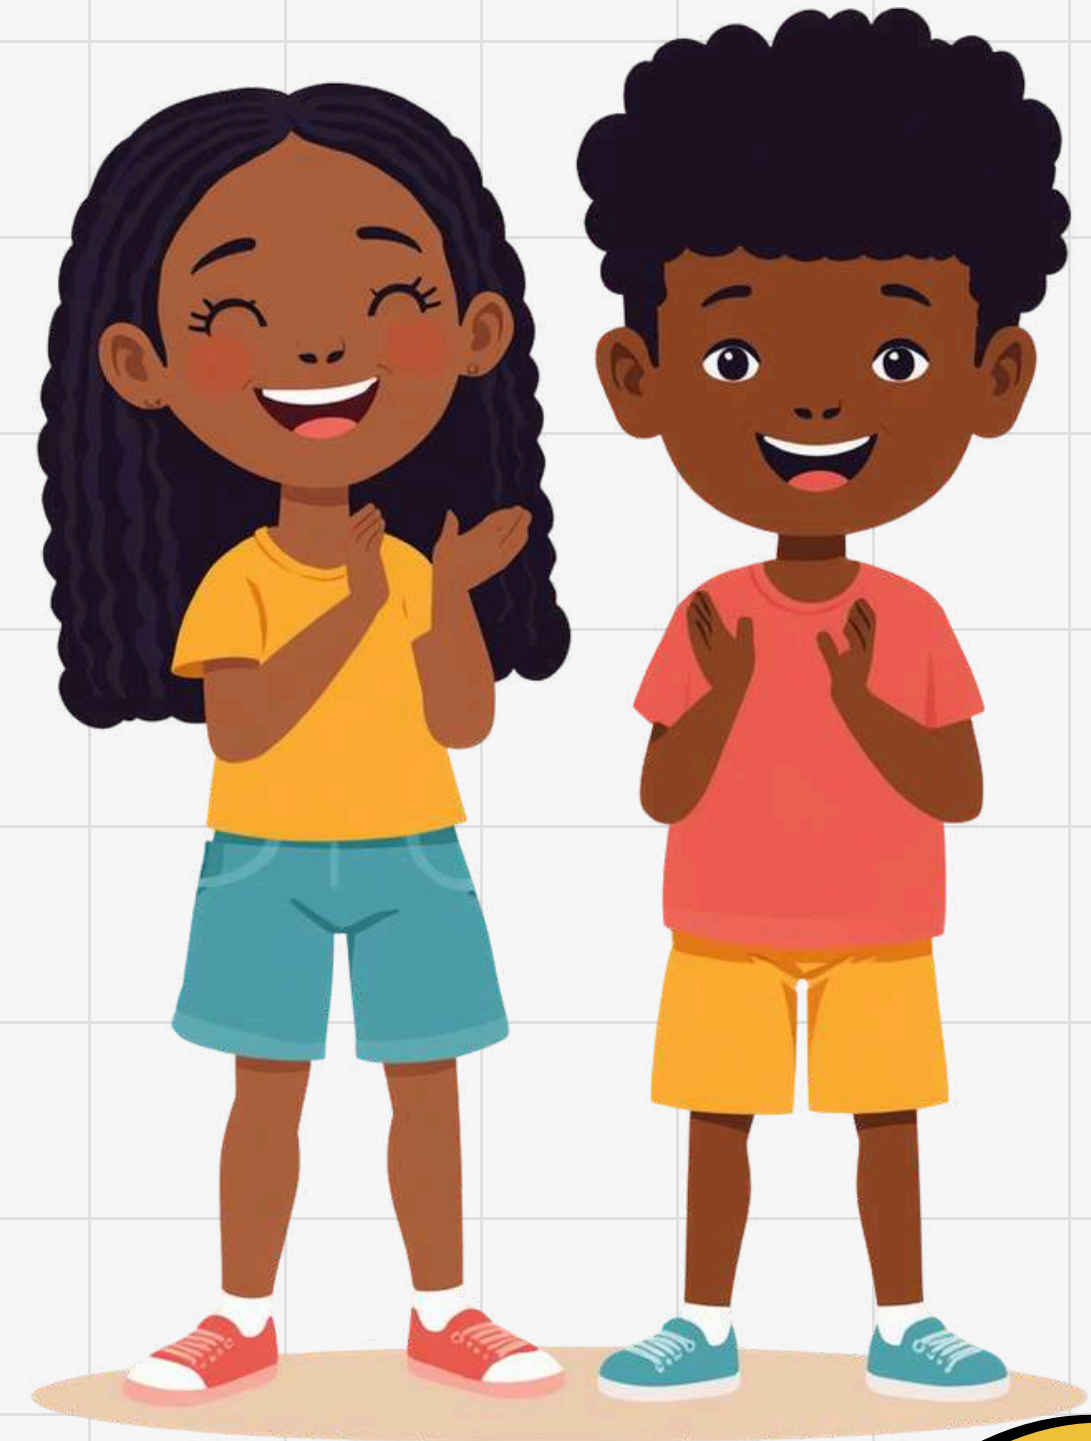

Ask an adult to help
you try the Elephant
Toothpaste experiment!
Have fun and stay safe!

Thank You!

Thank you for exploring science with us!

Do you have any questions? What was your favourite part of the experiment?

Bonus: More Science Fun!

- 🌋 Baking soda + vinegar volcano
- 🧪 Color mixing magic
- 🪨 Floating and sinking objects
