

Building Our First Webpage Together

My Class Website!

PLANRS ACADEMY — MASTER COURSE for Grade 1

The Website Mystery

Have you ever looked at a website? Like Zomato, YouTube, or our school website? How does the website KNOW what to show?

Someone wrote special instructions called HTML!

What is a Website?

A website is a page you visit on the internet using a browser like Chrome or Safari. Think of the Zomato app — Amma opens it to order food. There's a page showing dishes, photos, and prices. Someone **WROTE** instructions to make that page look that way. Those instructions are called HTML!

What is HTML?

HTML means HyperText Markup Language. It's the language used to write webpages! Think about a recipe card — it tells you: first do this, then add that. HTML is like a recipe card for a webpage!

What is a Tag?

An HTML tag is an instruction inside angle brackets `< >`. Tags come in pairs — opening tag and closing tag. Think of a TIFFIN DABBA! Open the lid , put roti inside, then close the lid .

Our Four Tags

- **<h1>** — Big heading (like a title on the board)
- **<p>** — Paragraph (a sentence of text)
- **** — Bold text (makes words thick)
- **
** — Line break (go to next line, no closing tag)

How a Browser Reads HTML

A web browser reads HTML and shows it as a webpage. Think of a cricket umpire! The umpire reads the rules and makes calls. The browser reads our HTML rules and decides what to show on screen!

Let's Build Together!

Now, let's build our Class Website together! Watch as I type HTML code step-by-step. Get ready to see the magic happen!

Step 1 — My Name Heading

We type the opening tag, add our content (your name!), then close it. The browser reads this and shows a BIG heading on the screen!

- `<h1>Kavya</h1>`

Step 2 — My Favourite Thing Paragraph

Now let's add a paragraph! The `<p>` tag creates a sentence of text below your heading. Type your favourite thing inside the tags!

- `<p>I love drawing!</p>`

Step 3 — Welcome Message with Bold Text

Now let's make words stand out! The `<b>` tag makes text bold and thick. The `<br>` tag moves to the next line — like pressing Enter!

- `<p>Welcome to my class
e!
I am glad you are here!</p>`

Student Activity Instructions

Your coding tasks:

1. Type your name using `<h1>`
2. Write your favourite thing using `<p>`
3. Add a welcome message with `<b>` and `<br>`
4. Stretch: Change heading color!
`<h1 style="color:orange">Kavya</h1>`

Student Example Showcase

Look at Arjun's code! He typed his name with `<h1>`, his favourite thing with `<p>`, and a welcome message with `<b>` and `<br>`. The browser shows it beautifully!

Our Class Website Reveal!

Look! OUR names and favourite things on one website! Everyone's code came together to make something amazing. You are now a certified web designer!

Quick Quiz Time!

- True or False? Let's check what you learned!
- Does every tag have an opening and closing?
 - Is `<h1>` a heading tag?
 - Does `<br>` need a closing tag?
 - Can you change the colour of text?
 - Is HTML like a recipe card?

Coder's Chant & Badge Award

"I am a coder, I am a creator! I build websites that shine brighter!"
Congratulations — you are now a
CERTIFIED WEB DESIGNER!

Parent Corner & Stretch Challenge

Parent Message: Encourage your child to show their website to family! Watch them explain their code — it builds confidence!

Stretch Challenge: Try changing your heading color with `style="color:orange"` or add a new paragraph about your pet! Keep coding and creating together!

See you next time, coders!

Thank You!

Keep coding and creating
amazing websites!
