

# FRACTIONS × WHOLE NUMBERS: THE FESTIVE DISTRIBUTION

## RAKSHA BANDHAN MITHAI BOX DILEMMA

---

Meera wants to share Kaju Katli with her 3 cousins, giving each  $\frac{1}{5}$  of the box.

How much Kaju Katli does Meera give away in total? 🤔

# REPEATED ADDITION OF FRACTIONS

Vivaan gives  $\frac{1}{4}$  pineapple cake to each of 3 friends at his birthday party.

$$3 \times \frac{1}{4} = \frac{1}{4} + \frac{1}{4} + \frac{1}{4} = \frac{3}{4}$$

- ✓ Multiply means repeated addition
- ✓ Add the slices to find the total

## VISUAL DISCOVERY: SLIDING BOXES

3 boxes  $\times$   $\frac{1}{5}$  each =  $\frac{3}{5}$  in total!

Watch the boxes slide together to see how fractions combine!

## MULTIPLYING NON-UNIT FRACTIONS MADE EASY

Mother makes 4 bowls of kheer, each needing  $\frac{2}{5}$  litre of milk.

$$4 \times \frac{2}{5} = \frac{8}{5} = 1 \frac{3}{5} \text{ litres}$$

- ✓ Multiply whole number by numerator only
- ✓ Keep the denominator the same
- ✓ Simplify to a mixed fraction if needed

## PRACTICE PROBLEM 1: TAILOR'S SILK FABRIC

A tailor needs silk border for 5 kurtas.  
Each kurta needs  $\frac{1}{3}$  metre of silk.

✓ Multiply numerator by whole number:

$$5 \times 1 = 5$$

✓ Keep denominator the same: 3

✓  $5 \times \frac{1}{3} = \frac{5}{3} = 1 \frac{2}{3}$  metres

🎉 The tailor needs  $1 \frac{2}{3}$  metres of silk!

# "OF" MEANS MULTIPLY!

"Of" means multiply!

$\frac{1}{3}$  of 12 oranges

$= \frac{1}{3} \times 12 = 4$  oranges

Multiply fraction by  
the whole number

Anjali eats  $\frac{1}{3}$  of her  
12 Nagpur oranges —  
that's 4 juicy oranges!

# CRICKET PRACTICE HOURS

Kabir practices cricket  $\frac{3}{4}$  hour daily for 6 days.

How many total hours did Kabir practice?

- ✓ Multiply numerator:  $6 \times 3 = 18$
- ✓ Keep denominator:  $\frac{18}{4}$
- ✓ Simplify:  $4 \frac{1}{2}$  hours!

## PRACTICE PROBLEM 3: ORANGES EATEN

Sai eats  $\frac{1}{3}$  of 12 Nagpur oranges.

$$\frac{1}{3} \times 12 = 4 \text{ oranges}$$

🍊 Sai ate 4 oranges!

## GOLDEN RULE FOR FRACTIONS $\times$ WHOLE NUMBERS

---

"Multiply the top, leave the bottom alone, then simplify!"

- ✓ Multiply the numerator by the whole number
- ✓ Keep the denominator the same
- ✓ Simplify or convert to a mixed number if needed

# FESTIVAL FUN WITH FRACTIONS!

Fractions are everywhere in our festivals! From mithai boxes to cricket practice, fabric for kurtas to bowls of kheer — maths lives in every celebration!

## RECAP: WHAT WE LEARNED TODAY

---

1

Multiplying fractions is like adding slices repeatedly.

2

Multiply whole number by numerator, keep denominator same.

3

"Of" means multiply when finding fraction of a set!

THANK YOU! KEEP MULTIPLYING WITH JOY!

Thank you for learning with us! Questions?

---
