

SCRATCH — SIMPLE ANIMATION

Make your sprite walk, dance, and talk — with code!

WHAT IS CODING?

Coding is telling the computer what to do!

Just like giving instructions to a friend, we give instructions to a computer. The computer follows every step — exactly as we say!

**MEET
SCRATCH!
FUN FOR
EVERY KID!**

WHAT IS ANIMATION?

Animation is making pictures move!

You see animations every day — in cartoons, movies, and fun games. When you watch a ball bounce or a character walk, that is animation! In Scratch, we can make our own animations using special blocks.

 Cartoons, movies, bouncing balls — all animation!

SCRATCH INTERFACE OVERVIEW

Scratch has 4 main parts that work together to help you create animations. Let's explore each one!

BLOCKS FOR ANIMATION!

● Motion Blocks

Move 10 Steps

Turn & Rotate

● Looks Blocks

Change Costume

Say "Hello!"

STEP 1 — CHOOSE YOUR SPRITE!

Let's pick a sprite to animate!

A sprite is the character or object you want to move in Scratch. Click the sprite library and choose your favourite!

🐱 Animals 🧑 People ✨ Fantasy

Tip: You can pick any sprite you like — there are hundreds to choose from!

STEP 2 — MAKE YOUR SPRITE MOVE!

Use the 'move 10 steps' block to make your sprite walk across the screen!

Click on the Motion blocks (blue blocks) and drag 'move 10 steps' into your scripts area. Every time you click it, your sprite takes 10 steps forward!

Try stacking blocks together and press the green flag to watch your sprite walk! 🚀

STEP 3: COSTUME CHANGE

2

WHAT IS A COSTUME?

In Scratch, a costume is a different look for your sprite! When you switch costumes quickly, it looks like your sprite is moving — just like a cartoon!

USE THE 'NEXT COSTUME' BLOCK!

Drag the 'next costume' block into your script. Each time it runs, your sprite changes its look. Try it inside a loop to see your sprite animate!

LOOPS!

Loops help your animation repeat again and again!

Use the 'repeat 10' block to wrap around your move and costume change blocks.

Instead of adding the same blocks many times, a loop does it for you — automatically!

Step 4: Try wrapping your blocks inside a 'repeat 10' loop and watch the magic!

STEP 5 — ADD SOUND!

Make your animation even more fun with sounds! 🎵

Use the 'play sound meow' block to add a sound to your sprite. Find it in the Sound blocks (pink blocks)!

Try it: Click the green flag and listen! 🔊

Sound makes your animation come alive — experiment with different sounds!

SEE IT ALL TOGETHER!

Look at the full block sequence below — this is a complete Scratch animation script!

● When Green Flag clicked

● Move 10 steps

● Next costume

🔄 Repeat 10

🔊 Play sound Meow

"This is how your animation works!" 🎉

BEFORE ANIMATION

A static sprite just stands still on the stage. It does not move, change costume, or make any sound. This is how your sprite looks before you add any blocks!

AFTER ANIMATION!

Now your sprite walks, changes costumes, plays sounds, and repeats with a loop! Adding motion, looks, and sound blocks brings your sprite to life!

YOUR TURN TO ANIMATE!

🎨 It's YOUR time to create!

Pick a sprite you love, make it move with blocks, and change its costume to bring it to life!

Try these steps:

- Choose a sprite from the library
- Add "move 10 steps" block
- Add "next costume" block
- Put it in a loop and press the green flag!

Experiment with different blocks — there is no wrong answer. Have fun and be creative! ✨

WHAT DID WE LEARN?

1. CODING

Coding tells the computer what to do — we give it step-by-step instructions!

1. SCRATCH

Scratch is a fun way to create animations using colourful blocks!

1. ANIMATION

Motion, looks, sound, and loops make your sprite come alive!

KEEP CREATING AND HAVE FUN!

Keep exploring Scratch and make your own stories! Thank you! 🎉
