

FRACTION PIZZA PARTY!

Grade 1 Mathematics Lesson

Welcome, Little Chefs!

Today is **Riya's Birthday**! She has one big round pizza to share with her two best friends, Aarav and Meera. To share fairly, everyone must get the exact same amount. This magic of fair sharing is called **Fractions**!

What is a Fraction?

A fraction is an **equal part** of a whole thing. When you share something fairly so every piece is exactly the same size, you are making fractions!

- **Equal Pieces:** A real fraction (like a roti cut cleanly in half).
- **Unequal Pieces:** NOT a fraction (like a roti torn unevenly).

Meet One-Half ($1/2$)

When you cut something into **2 equal pieces**, each piece is called **one-half**.

Pizza: Cut once down the middle for 2 friends.

Paratha: Amma cuts one for you and Papa.

Lassi: Poured equally into 2 glasses.

Meet One-Quarter ($1/4$)

When you cut something into **4 equal pieces**, each piece is called **one-quarter**.

Besan Barfi: A square barfi cut into 4 pieces for the family.

Watermelon: Cut into 4 pieces for 4 people.

Sandwich: A square sandwich cut into 4 corners.

Which is bigger?

Remember: **More Pieces = Smaller Pieces!**

A $1/2$ (half) is **bigger** than a $1/4$ (quarter) because you only share with 2 people instead of 4!

Chef's Activity Time!

1. **Task 1: Cut It!** Draw lines to cut pizzas and rotis into halves and quarters.
2. **Task 2: Equal or Not?** Circle shapes that have pieces of the exact same size.
3. **Task 3: Spot the Mistake!** If a circle is labeled $\frac{1}{2}$ but one side is bigger, is it a fraction? (Hint: No!)

Certified

FRACTION CHEF

You can share fairly!
